Just in case you missed reading the May 7-21 issue, we thought we'll bring it your notice that the Business Today Survey rates us No.1 among all Indian Banks.

At Corporation Bank, we believe good enough is not enough and it is reflected in our performance. As a pro-active, efficient, customer-oriented organisation, we've moved up from the 1993-94 position of No.3 to the No.1 position among all Indian banks in 1994-95. Thanks to our dedicated employees and to the unflinching loyalty of millions of customers, this marks the beginning of a new journey.

Corporation Bank

Performance sets us apart

Education and Nation-Building

The structuring of knowledge is intimately linked to the structuring of power. In India, since 1947, the project of nation-building has lain at the heart of educational policy. It has been an uneasy and sharply contested process, however. Education has been the site of multiple definitions of the nation as various claimants to power have attempted to lay their imprint upon it.

Rural Financial Institutions

After the initiation of the economic reforms in 1991 several formal and informal proposals have emerged for the restructuring of the existing rural financial institutions (RFIs), questioning both their developmental objectives and their financial viability. With few exceptions, however, none of these proposals has been based on a sound understanding of the working and problems of the RFIs.

2083

Social Security in Unorganised Sector

In Kerala the government has initiated several measures to provide social security to workers in the unorganised sector. Welfare funds have been created and administered through tripartite statutory welfare boards. A study of the working of the Kerala Headload Workers Welfare Scheme.

India and CTBT

It is altogether illegitimate to support the government's rejection of the Comprehensive Test Ban Treaty (CTBT) while domestically opposing pressures for the exercise of the nuclear option. The calculations that drive the one are completely identical with those that sustain the other.

2061

Reforms Gift-Wrapped

It is remarkable that without resiling from any of the reform commitments or conceding anything substantial to the victims of the reform programme in the last five years, finance minister Chidambaram has been able to disarm his critics in the United Front, including the Left parties, and even to persuade them to applaud his budget.

2064

ULFA and Assamese Nationalism

The ULFA phenomenon is the product of the total alienation of frustrated Assamese youth from the Indian state. But the weakness of the Assamese national base, with numerous ethnic groups suspicious of Assamese hegemony and no longer willing to find a greater common identity in Assamese nationality and vast numbers of immigrants disturbed by the ambiguity of their situation, has made it impossible for the ULFA to formulate a programme of national reconstruction.

Export and Perish

The mainstream software industry in India has deliberately neglected the domestic market in favour of exports. The dangers of walking on one leg have been convincingly analysed in a recently published book.

207

Pacification of Kashmir

State-sponsored terrorist outfits have been used by Latin American dictators to put down popular dissent. The technique is being used in Kashmir by a democratic government in New Delhi — "to create conditions for a free election" there. 2059

Emancipatory Discourse

The Gandhian and Ambedkarian discourses are not antithetical. Both are concerned with the issue of emancipation. Today when the legitimacy of the emancipatory discourse is being challenged and the dominant discourse upholds capitalism, it is all the more necessary to broaden the scope of the Gandhian and Ambedkarian discourses.

'.Justice'

After 19 years Archana Guha who barely survived police torture as a suspected naxalite has received 'justice' — her torturer has been sentenced to a year's simple imprisonment.

LETTERS TO EDITOR

Oilseeds: Self-Sufficiency and Allocative Efficiency

THE article on oilseeds by Ashok Gulati et al (March 30) raises a number of questions.

- (1) Looking at Table 1 of the study from a different angle one can say that imports of edible oil during 1976-77 to 1987-88 accounted for about 43 per cent of domestic production on an average as compared to only 3 per cent during the preceding period, i.e., 1971-72 to 1975-76. This happened despite the fact that production was up by 13 per cent. In the record crop year of 1983-84, imports also reached a record level. According to the authors, it was the rising demand that led to massive imports. Or had the imports actually artificially hiked up the demand?
- (2) My contention is that these excessive imports led to depressed prices of oilseeds for a fairly long period of time. And obviously it led to allocative inefficiency. The authors are silent about this. Whether the present price rise is a correction factor or not I would leave to the authors to ponder.
- (3) The authors' contention is that a rise of oilseeds area, as a result of high prices, has led to allocative inefficiency. After the green revolution, the area under wheat and rice rose at a tremendous pace, at the cost of oilseeds, pulses and coarse cereals. Did allocative inefficiency arise at that time or not?
- (4) Who raised the prices of oilseeds/ edible oils recently? The MIO of the NDDB with a small per cent share (about 2 per cent) in the edible oil business cannot do it. The authors seem to be very biased against the MIO. We all know that support prices of oilseeds have remained on paper, but still they have been mentioned while quoting the MIO operations. At another place, instead of comparing the farm prices of oilseeds, the authors have compared edible oil prices to bring home their point. I don't know what they mean "by overplaying with the price entrument". Edible oil prices are not administrated prices like those of mineral oil.

 They are influenced by government operations as in the case of sugar. Then how did it happen? Due to the MIO? It is a farfetched conclusion; any student of economics can argue it out.

A time series analysis of groundnut oil prices for the last 5/6 months reveals 49 months' price cycles. These cycles broke their rhythm during 1976-77 to 1987-88 but the pattern revived after that. It means that

prices are on their normal path of behaviour. These price movements are now obviously related to supply and demand, and to say that they have been manipulated is meaningless.

- (5) How far can the macro-level factor of the NPC be relevant in such an analysis? Or does it mean turning a blind eye to the micro-level foundations. Which is the better alternative? NPC or the relation of domestic prices of oilseeds to their cost of production? The authors haye not perhaps studied the Farm Management Study of Groundnut in Tamil Nadu. They seem to assume that all the regions of the country and all the crops have equal physical endowments like fertile soil, assured rainfall, etc, and infrastructural facilities like irrigation, procurement operations of the government, etc, and also that substitution is easy.
- (6) The article by Mishra and Hazell (in the same issue of the EPW) as well as by other experts on terms of trade seems to suggest that it is not the barter terms of trade between the crops but income terms of trade (that is relative price variations corrected by relative productivity variations) which are more important in explaining relative acreage changes. I would be the first person to accept the conclusion of the authors if it is substantiated by such studies rather than on the basis of the NPC or barter terms of trade

roughly worked out as by the authors.

The impression is created that the author support the levels of imports as experience in the period 1976-77 to 1987-88. With my little experience with the oilseed sector, suspect the death-knell of the oilseed growe in the dry and semi-dry regions of the country if such a policy of massive imports of ediblioil is revived again.

Any short-period study devoid of it historical perspective and any macro-leve study devoid of its micro-level foundation are bound to reach some misleading conclusions. If we have failed to augmen productivity of some of our major traditions oilseeds like groundnut, sesame, coconut etc, at par with the 'green revolution' crop we have no right to snatch away whateve little gain the farmer has acquired as a resul of price rise from normal forces of suppl and demand, undisturbed by excessiv import. In the end, it may be stated that ther is no overplaying with the price instrumer now, but it was definitely underplayin with the price instrument during 1976-77 t 1987-88. It is just that we are compensatin the poor oilseed grower for his cumulativ loss of around 12 years inflicted deliberatel by the government.

Folklore of 'Budget Deficit'

MONG the many elements of continuity in the fiscal A strategies adopted by finance minister P Chidambaram and his predecessor, that relating to their attitude towards the level and mode of financing of the budgetary deficit deserves comment. Chidambaram has stuck by Manmohan Singh's unrealised 'commitment' to a lower fiscal deficit, with the promise of bringing it down immediately from 5.9 per cent of GDP to 5 per cent in this financial year and to less than 4 per cent in course of time. However, their joint commitment to a programme of 'reform' based on the provision of incentives and shunning of disincentives to private investment has meant that the tax-GDP ratio continues to remain extremely low in India. At present it stands at less than 16 per cent (taking the centre and the states together) compared with levels varying between 19 and 38 per cent in the developed capitalist nations. As a result, the adjustment in the fiscal deficit does not involve any, or at best only a marginal, reduction in the revenue deficit. The casualty is capital expenditure, which this year is projected to rise by just 9 per cent in nominal terms or by 2-3 per cent in real terms, even though revenues are assumed to go up by around 18 per cent in nominal terms.

But the similarity does not end here. To finance even the lower projected fiscal deficit the finance minister has chosen to hold to a minimum his borrowing from the RBI through the issue of ad hoc treasury bills. In keeping with the failed objective of the previous government, the official 'budget deficit', denoting borrowing from the RBI against treasury bills, is to be reduced from last year's level of Rs 7,600 crore to a hoped for Rs 6,578 crore, which is close to the Rs 6,000 crore ceiling set in an MoU between the finance ministry and the Reserve Bank of India last year. Chidambaram has further declared that he intends pursuing the strategy of reducing such borrowing against ad hocs to zero within a suitable time frame.

The reasoning underlying this initiative is that the right to issue ad hocs whenever required results in two objectionable trends. First, it ostensibly encourages fiscal indiscipline, since the finance ministry is never seen as short of funds, which are treated as equivalent to newly printed money. Second, it increases reserve money in the form of central bank credit to the government and therefore contributes to an 'automatic' increase in money supply, which undermines the monetary authorities' control over the financial and economic system. On both these counts the initiative is misplaced.

As the reference above to the tax-GDP ratio indicates, the fundamental element of 'indiscipline' in fiscal management in India is that surplus earners in a society characterised by extreme inequality are able to influence tax policy and resort to tax avoidance and evasion to an extent where the share of the national cake mobilised by the state to meet its commitments

is abysmally low when compared to most 'market-friendly' capitalist countries. The glaring instance of 'zero-tax companies' which rake in huge profits, which the finance minister has attempted to partially deal with this time, is just one of the innumerable consequences of the inadequacies of the direct tax regime and its administration. Unfortunately, the thrust of tax reform has been to reduce tax rates rather than do something about the massive shortfall in the tax-GDP ratio.

As for its effects on money supply, experience suggests that controlling the official 'budget deficit' as a means to strengthen monetary management is by no means effective. An obvious consequence of capping the issue of ad hocs is that the government has to turn to the open market to meet the large borrowing requirement resulting from low tax revenues. Assuming that the contribution of other sources of reserve money expansion (such as the net foreign assets of the central bank) remain constant, such a shift in the source of borrowing results in a stringent liquidity situation and a sharp rise in interest rates, since the government competes with the private sector to garner lendable resources. This not only increases the interest liability associated with borrowing at the margin, but also makes it difficult for the government to find takers for its securities to an extent greater than warranted by devices of pre-emption of financial sector resources such as the statutory liquidity ratio. Since the central bank normally underwrites government securities, this soon results in a situation where large chunks of government bonds devolve on the RBI for lack of sufficient 'public' interest. Thus central bank credit to the government (and, therefore, reserve money) does rise, though a large part of this additional credit is at market related interest rates rather than the low 4.6 per cent rate on ad hocs. For example. net RBI credit to the central government increased by close to Rs 20,000 crore in the financial year 1995-96, when the budget deficit stood at just Rs 7,600 crore. The implication is that so long as resources are not mobilised the tendency for fiscal management to force increases in money supply and reduce the 'independence' of the monetary authority will persist.

What does change, however, is the interest liability on the revenue side of the budget, which begins to reflect the effects of high cost borrowing, increases substantially every year and renders the task of reducing the revenue deficit increasingly difficult. Thus the strategy of capping ad hocs erodes the ability of the government to sustain capital expenditures without sharply increasing the fiscal deficit. If yet the government persists with this measure, it possibly is because it strengthens the material ground for those who argue that the state is in no position to finance needed capital expenditures and must let them devolve on a private sector which is induced to invest with even more concessions.

UTTAR PRADESH

Private Agendas

THE Uttar Pradesh electoral scene is getting murkier, with the anti-BJP forces hopelessly divided and their votes likely to be disssipated in triangular contexts. The BJP may have the last laugh, unless the CPI(M)'s desperate efforts to avoid mutual confrontation between the BSP and the United Front candidates really succeed in bringing about some last-minute adjustments.

For those among the electorate seeking a viable political alternative there is hardly any choice. None of the political parties in the fray had covered itself with glory during their respective tenures in office. The BJP which is the most despicable of the lot, by demolishing the Babri Masjid and unleashing widespsread riots under its administration in the state, created a nation-wide atmosphere of communal terror from which India is yet to recover. Mulayam Singh Yadav's Samajwadi Party (SP) and Kanshi Ram's Bahujan Samaj Party (BSP), riding on the wave of backward caste and 'dalit' solidarity and Muslim support, came to power soon after. But lacking any wider political perspective and programme of socioeconomic change, the provincial 'satraps' of both the parties of the SP-BSP coalition government got embroiled in clashes over personal one-upmanship, reinforced by their respective casteist loyalties. The SP-BSP coalition government's emergence reflected in a large measure the hopes and aspirations of the majority consisting of the socially backward and oppressed castes and classes, as well as the persecuted minority communities, of Uttar Pradesh. But the leaders whom they voted to power betrayed their hopes. The Mulayam Singh-led SP behaved like a big brother, antagonising the BSP and in the process fuelling the careerist ambitions of the leaders of the latter. In order to oust Mulayam Singh from power, the Kanshi Ram-Mayavati duo of the BSP had no compunctions in allying with the BJP which till the other day they had denounced as 'Manuwadi' or subscribing to the brahminical anti-dalit values of the Hindu upper castes - and coming to power. The political vendetta that Mayavati as the chief minister followed against officers who had worked under Mulayam Singh by ousting and replacing them with her own favoured bureaucrats was as bad as Mulayam Singh's policy of appointing and protecting officials of his own choice to key posts in the administration. This practice of political manipulation of the administration all these years has now come home to roost, with the bureaucracy losing all credibility. While Mulayam Singh has been indicted by the Ramesh Chandra committee as the main accused behind the alleged attack on BSP leader Mayavati at a guest house in June last year, Mulayam's supporters are quick to point out that Ramesh Chandra had signed the report indicting Mulayam Singh after he had been promised re-employment by the then chief minister Mayavati as chairperson of the UP Public Service Commission. Who are we to believe?

The electoral battle is being fought out against this sordid background of mudslinging between the SP and the BSP. Both parties appear to be determined to give the elections a violent twist, with Mulayam Singh asking his followers to form themselves into an armed battalion called, of all things, the 'Red Brigade' and Kanshi Ram retaliating with the threat to organise his followers into a 'Blue Brigade'. Given this mood of bitter confrontation between the two camps, the CPI(M)'s hopes of persuading them to agree to electoral adjustments seem to be doomed to failure.

The role of prime minister Deve Gowda in this dismal scene in UP is even more curious. First, he appointed as the state's governor Ramesh Bhandari who had earlier acquired considerable notoriety as a hatchet man of the ruling Congress wherever he had been posted, most notably in Tripura some years ago. Second, Deve Gowda sent disturbing signals to his partners in the central coalition by choosing to hob-nob with Congress politicians during his recent public meeting at Rampur in UP totally ignoring Mulayam Singh Yadav and his SP. Is he in favour of a Congress-BSP victory in UP, that could help him in clipping the wings of Mulayam Singh?

FINANCIAL SYSTEM

Further Push to Cost of Funds

THE phenomenal growth of non-banking financial companies (NBFCs) and unincorporated enterprises in the financial area has focused attention on the need for regulation of their activities. After the 1991-92 financial scam in which some NBFCs were involved, the Joint Parliamentary Committee (JPC) had recommended the strengthening of legislative provisions to ensure proper functioning of NBFCs and in particular protection of depositors. Even as the finance ministry has been getting ready to introduce the legislative changes for compulsory registration and better regulation, the Reserve Bank has been using the already existing powers to enforce a modicum of discipline on the NBFCs. Armed with the A C Shah Committee's recommendations, the RBI has been issuing guidelines covering different aspects of the working of NBFCs. Among the more important measures taken by the RBI are the requirement that NBFCs with net owned funds (NOFs) of Rs 50 lakh and above must get themselves registered with the RBI, the enlargement of the definition of regulated deposits to include inter-corporate loans and borrowings from shareholders by private limited NBFCs, the prescription of prudential guidelines for registered NBFCs for income recognition, accounting standards, provisioning for bad and doubtful debts, capital adequacy norms and concentration of credit and investments, the requirement that registered NBFCs get themselves rated by one of the three rating agencies at least once a year and curtailment of bank finance available to NBFCs on a selective basis. Very recently the RBI has brought within its regulatory framework the activities of 'nidhis', imposing on them the 15 per cent ceiling on their deposits and preventing them from issuing advertisements.

However, as the authorities are aware, the objective of effective regulation and supervision of the activities of NBFCs and particularly those of the massive number of unincorporated enterprises involved in financial intermediation remains elusive. Of the 2,49,181 joint-stock companies at work as of March 1992, 35,832 were financial companies - a quantum jump from 7,063 in March 1981; now financial companies are said to number about 40,700. Of them only 745 are registered with the RBI. In the absence of a size distribution of NBFCs, it is difficult to say if all those qualifying for registration have in fact registered themselves. If the AC Shah Committee's assessment that some 500 companies which controlled more than 85 per cent of all deposits of NBFCs would qualify for compulsory registration was correct, almost all the companies would seem to have been covered. But of the 745 NBFCs registered with the RBI, as of September 30, 1995 only 255 had submitted the required half-yearly returns on their prudential performance and only 121 companies had reported their credit ratings.

Apart from the NBFCs, there are hundreds of thousands of unincorporated enterprises carrying on financial activities in different nooks and corners of the country. Recognising that it was well-nigh impossible to bring them under any direction and control, the legislative provisions contented themselves with prescribing the maximum number of depositors per firm of individuals (25 depositors) and per partnership and unincorporated association of persons (a range of 25 to 250 depositors). No limit on the amount of deposit has been prescribed nor is there any specific institutional arrangement for the enforcement of even these provisions, though nominally the RBI and the state governments possess statutory powers of prosecution for violation of the law. There are not even any guestimates of the funds mobilised by these enterprises, though their annual turnover

would undoubtedly add up to a mindboggling figure.

In the case of NBFCs, there is some information available from the annual surveys conducted by the RBI. The NBFCs have to report data on two types of deposits accepted by them: regulated deposits that are subjected to certain ceilings and other restrictions and exempted deposits such as funds obtained from the government, security deposits, intercompany borrowings and funds mobilised from directors and shareholders in the case of private limited companies which are not subject to ceiling regulations. Effective from April 1993, inter-company borrowings and funds received from directors and shareholders also come under regulated deposits. Taking all financial and non-financial companies together, the share of regulated deposits has come down from about 32.4 per cent in March 1981 to 14.6 per cent in March 1992, suggesting that now as much as 85 per cent of non-banking deposits (Rs 43,688 crore out of Rs 51,185 crore) come from sources not subject to any ceiling regulation (these do not include borrowings from banks and financial institutions as per the surveys up to 1992). Regulated deposits of all nonbanking companies constituted about 3.6 per cent of the aggregate deposits of scheduled commercial banks in the early 1980s and rose to around 4 per cent in the second half of the 1980s; since then the proportion has come down to 3.2 per cent. If we consider the regulated deposits of only the NBFCs, they were Rs 2,823.5 crore or just 1.2 per cent of aggregate bank deposits in March 1992, According to the RBI, though 7,556 NBFCs reported deposit-acceptance activities, only about 700 companies were active participants in these activities and almost 97 per cent of the deposits raised by NBFCs were in the names of just about 25 companies. While this may be correct insofar as the reporting companies are concerned, deposit-acceptance activities appear to be much more widespread among both corporate bodies and unincorporated enterprises.

Data for the post-reform period suggest that deposits attracted by financial companies have tended to dwarf those attracted by manufacturing or trading firms. For instance, in 1991-92 the entire expansion of Rs 750 crore under regulated deposits took place with financial companies, with non-financial companies showing a negative flow of Rs 41 crore. An ICICI study suggests that deposits and unsecured loans of 150 NBFCs jumped from Rs 4,999 crore at the end of March 1992 to Rs 6,830 crore (a rise of 36.6 per cent) in March 1993 and to Rs 8,640 crore (26.5 per cent) in March 1994. Subsequent indicators suggest that financial companies have grown at a considerably faster rate than non-financial companies. Also, though data are not available for the most recent period, the

growth of NBFCs has outpaced that of the banking sector.

Against this background, the RBI's latest package of liberalisation measures in the form of lifting the interest rate ceiling of 15 per cent on deposits accepted by equipment leasing (EL) and hire purchase (HP) finance companies as well as loan and investment companies which are registered with the RBI and which comply with both prudential norms and credit rating requirements give rise to serious misgivings. The same is true of the removal of the ceiling on deposits hitherto kept at 10 times net owned funds (paid-up capital and free reserves net of accumulated losses) in respect of registered EL and HP companies and the raising of the ceiling on deposits of registered loan and investment companies from equal to NOF to twice NOF.

These measures may result in the tail wagging the dog, that is, the operations of the registered NBFCs influencing the working of the entire financial system. The PR Khanna Committee on monitoring of finance companies, on whose recommendations these relaxations have been effected, appears to have mixed up the question of supervision with monetary policy issues. The removal of the interest rate ceiling or the ceiling on borrowings through public deposits by NBFCs constitutes a major monetary policy issue the importance of which goes far beyond the question of supervision. The new policy also goes counter to the RBI's approach spelt out only last year which considered it necessary to moderate borrowing by NBFCs from banks and financial institutions. The A C Shah Committee had stressed that the RBI should shift its emphasis from regulating deposits to monitoring the NBFCs' assets and end-use of funds. The quality of assets of NBFCs, it is well known, leaves much to be desired particularly in the context of their role in the capital market. Therefore, the enlargement of the scope available to them to mobilise resources, even if they satisfy creditrating norms, will have implications for financial stability. Registration with the RBI. credit rating and satisfying prudential norms at a given point in time cannot be enough of a guarantee against undestrable asset management by NBFCs.

Finally, registered NBFCs will in future influence the interest rate structure for bank deposits and lending. Though the funds mobilised by NBFCs constitute only a small proportion of bank funds and though banks enjoy certain institutional and fiscal advantages, the NBFCs' ability to influence the interest rate structure on bank deposits and credit at the margin should not be underestimated. As it is, the freeing of interest rates on banks' fixed deposits beyond one year has pushed up the average cost of funds for banks following competition among banks themselves. Now banks will have to

face competition from big-size NBFCs as well which will further push up the average cost of funds to productive enterprises all over the country. A major factor responsible for the high interest rates on the borrowings and debt instruments of manufacturing firms is the competition they face from banks, financial institutions and NBFCs which have sought to mobilise funds at very high rates of interest. This phenomenon will be further reinforced with the freedom which the RBI has now extended to registered NBFCs.

WOMEN

Haphazard Inputs

'IMPROVEMENT of women's status' and consequently women's issues have become part of the acknowledged and well-projected agenda of the state over the last couple of decades. Over a period of time efforts to institutionalise these concerns have led to the establishment of departments and the constitution of permanent commissions and services. But what is increasingly becoming clear is that even after all these years, women have remained an agenda item and concern for women and their status in society has not permeated the state's consciousness. The self-evident truth is that while women's issues need to be provided space in some sectors, they have not substantially influenced the overall perspectives. The central budget for 1996-97 may be read as an indicator of this, showing as it does the haphazard nature of the state's concern for women.

Take for instance, the health sector allocations. For decades the only component specifically addressed to women has been the maternal and health programme. Much has been written about the narrow perspective of the programme and how it does not produce the results that it seeks. For over two decades now the MCH programme has formed a much-neglected component of the family planning programme. It was introduced with the specific purpose of bringing in more family planning acceptors. In the last few years with a plateau having been reached by the family planning programme, there has been increased attention and allocations for the MCH programme. This year for instance. the central budget allocates an increase of 25 per cent for the scheme, making it the only component of the entire family welfare programme (comprising urban and rural family welfare services and MCH) which has seen any substantial rise. Interestingly, however, the budget documents continue to delineate the objective of the programme as being "to enhance the acceptability of the family planning programme...to enhance chances of child survival". That this is not simply a lack of attention to textual detail is shown by the fact that the components of the programme have shown a narrowing of attention on the mother - prophylaxis against anaemia among lactating mothers and among children for Vitamin A deficiency, 'dai' training and oral rehydration therapy. In short, the considerable literature on what must be the most effective components of the MCH programme has been selectively incorporated. For example, literature showing that the nutritional supplements to pregnant mothers do not influence birth-weight has led to the abandonment of the approach and now the narrow objective is to prevent anaemia among lactating mothers. Moreover, notwithstanding the adoption of the reproductive health strategy, whatever its merits and demerits, the central health budget does not record a separate component for it.

That different departments and even components of the same department dance to different tunes is evident at other places. The women and child development department's budget records a small increase in its allocation for women's welfare budget, which includes such components as assistance for hostels for working women, the National Commission for Women, short-stay homes, etc. which means only that the funds available this year, accounting for inflation, will be much the same as last year. Under the same department fall the Integrated Child Development Services, which has seen considerable success in some states, the day care centres scheme which provides for the setting up these centres for the children of weaker sections and the 'balwadi' nutrition programme which provides grants-in-aid to voluntary organisations to run balwadis for children between three and five years. All these are run by the central government departments and none have been provided with additional allocations, which means that they will actually be making do with much less than last year. It is hardly necessary to point out that schemes such as the day care centres are vital for releasing not only women for income generation but also young girls, who are often the substitute care-givers, for perhaps some schooling.

As a result of a grant from the World Bank, the ministry of labour has initiated a plan for establishing new industrial training institutes (ITI) or new women's wings in existing ITIs. For now, it is a centrally sponsored scheme with 50 per cent contribution from the states. Just how it will be affected once the World Bank assistance ceases is yet to be seen. A case in point is the upgrading of PHCs in low development districts which included technical aid and the appointment of a specialist obstetrician with the objective that high risk births could be conducted safely. But once the 'upgradation' took place and the external assistance ceased, the government has been content to give only a small 'token' assistance and the budget for these

...حد ، ۱۸

will be drawn from the existing already . stretched PHC budgets. In other words, the influx of funds at any point of time is no indicator of the government's long-term intentions or plans.

All this is not to say that these schemes directed at women's well-being, for however short a period, have not resulted in gains for women. But there is a big leap yet between small gains and concessions and a perspective which includes women as equal and participatory recipients of the development process.

HEALTH

'Safety Net' Approach

THE unvoiced assumptions prompting a state health programme are these: that the major co-ordinates of people's health lie outside interventions by the medical system; that health is rooted in the well-being of the people which is an outcome of having adequate access to work, food, shelter, safe water supply and a sense of socio-cultural and economic security. Health programmes assist in supplying the medico-social inputs - prevention of communicable diseases through health education, perhaps immunisation where necessary, early detection and efficient, effective and ethical medicare for the range of illnesses and problems which are difficult to prevent. Increasingly, with the breakdowns in the social and economic conditions, it is obvious that the health system and health programmes are increasingly being viewed as repair shops for the foot soldiers of capitalism - some have to be discarded, others may be put together and sent out into the field again. Thus an efficient health-system-as-repairshop becomes an urgent necessity. In such a context the efficiency or otherwise of the state's health programme is a somewhat irrelevant issue. Its reach is defined only in terms of minimal prevention of epidemic spread - preventable diseases must be prevented from spreading to the upper echelons of the social system. Thus malaria, a direct consequence of ill planned irrigation projects, urban spread and rural decay, must indeed be contained; the growing menace of tuberculosis, rooted in the rootless lives of migrant labour desperately seeking work, living in deprivation and working under atrocious conditions, must be tackled too through public health measures.

In such circumstances is it surprising that some 7 per cent of the central budget allocations last year for disease programmes were unspent? As unutilised funds go it is not a large amount, but it is indicative of the fact that providing larger sums for public health is not the only answer to the country's health problems. It is perhaps a result of the sense of futility which has gripped health

planners that the increases and decreases in the budgets every year appear to have little to do with the current health picture. For instance, year after year for the last four years the textual explanations for the heads under the department of health carry the same figures of disease incidence. The budget papers have told us repeatedly for the last four years of the great success of the malaria programme in the 1950s with no mention of its spread currently. But there is no indication why the malaria control programme receives only 28 per cent of the budget this year against 35 per cent in 1993-94. We are also told that the aim of the trachoma and blindness control programme is to "reduce blindness in the country from 1.4 per cent to 0.3 per cent by the year 2000 AD". There is no indication whatsoever about the achievements of the programme or why increasing proportions of the disease programme budget - from 9.7 per cent in 1993-94 to over 15 per cent this year are being spent on the programme. Most distressing is the fact that our elected representatives are so caught up in the major components of the annual budgets, both at the centre and the states, that no issues are raised about the health programmes before the budgets are passed. This too perhaps is indicative of the fact that the public health programme is seen as a 'safety net' to catch those who can be caught and bounced back, while others are lost. The fact that centrallysponsored disease control programmes take away more than a third of the health budget, after some 50 years of a state public health programme, is not so much an indication of the inefficiency of the health system as of the inability of the socio-economic system to support a healthy society.

In such a context the proposal to set up a national illness assistance fund, for which a small provision has been made in the central budget, needs to examined closely. What, for instance, is the nature and proportion of morbidity which requires hospitalisation? How much of it is an outcome of or associated with communicable preventable diseases, a consequence of the failed prevention programmes? What would it really mean in the many states which have poor medicare infrastructures? While there are obvious merits in the scheme, it would rapidly deteriorate into a corruption-ridden top-down scheme, without a vigorous people's movement to ensure accountability. This is what has largely happened with the ESIS.

Again, of course, it is expedient for the political parties in power to implement such a scheme; it is after all another 'safety net' and it allows for the obliteration of the need to ensure that a society is inherently safe and healthy. If this is not to happen then the initiative for propelling the scheme through must be usurped by people's groups and the state must be forced to expand it over time.

COMPANIES EPW Research Foundation

GRASIM INDUSTRIES

Expansion Programme

PLAGUED by intermittent power cuts and a fire that threatened production, performance of Grasim Industries, the flagship company of the Kumaramangalam Birla group for the year ended March 1996 was less than satisfactory. Grasim Industries has diversified interests ranging from textiles and chemicals to viscose staple fibre (VSF) and cement. Turnover for the year ended March 1996 rose from Rs 2,061 crore to Rs 2,742 crore in the previous year, a rise of 33 per cent. Other income was up by 95 per cent. Interest costs moved up by 62 per cent. Provision for depreciation was up by 65 per cent while that for tax moved up by 174 per cent. Profits were up by 8 per cent from Rs 309 crore to Rs 332 crore. The company stepped up dividend payment from 57.50 per cent paid last year to 62.50 per cent.

Performance of the VSF division with a 43 per cent share in the company's turnover was the only bright spot in the otherwise bleak performance. Production of VSF stood at 1,62,470 tonnes during the year against 1,43,421 tonnes in the preceding year. Through the export of pure and blended yarn, fabrics and made-ups the division contributed substantially to the company's foreign exchange earnings. Over a period of four years from 1991-92 to the year under review, exports from the division have increased to Rs 1,136 from Rs 523 crore, a rise of 118 per cent.

Hampered by problems of transportation, heavy load shedding and power cuts production at the cement plants was not as expected. Capacity realisation was low at all the main plants. Though total cement capacity was raised to 45 lakh tonnes, cement production was marginally above 30 lakh tonnes.

A fire at the sponge iron plant in December 1995 put it out of commission till March this year, and production stood at 3.74 lakh tonnes at Vikram Ispat, short of the targeted 5 lakh tonnes.

Major modifications at Harihar, a major overhauling at the Mavoor plant and severe power cuts by the Kerala State Electricity Board led to a fall in the production of rayon grade wood pulp from 1,16,212 tonnes to 1,06,946 tonnes. The contribution from the textile division which manufactures blended yarns and fabrics was down from 15 per cent to 9 per cent.

The company has a major expansion plan on the anvil and is coming out with a \$125 million GDR issue to fund it. A 70,000 tonnes per annum greenfield rayon grade wood pulp plant is to be set up in Punjab. Rayon grade wood pulp is a major raw material for VSF. To meet the future requirements of VSF, the company is constructing a new plant with a capacity of 60,000 tpa in Gujarat, with the first phase to go on stream by December this year and the second by September 1997. Rs 10 crore

are to be invested for setting up captive power plants at the existing cement plants which would ensure uninterrupted power supply. With production problems under control and realisations from its expansion projects due in the near future, Grasim Industries can look forward to a better 1997-98.

GRINDWELL NORTON

Growing Market

The first unit in the industry to be awarded the ISO 9000 certification, Grindwell Norton is a market leader in bonded abrasives used in the auto, steel and forging industry. It has moved into coated abrasives and industrial ceramics, also known as engineered ceramics. Offering a range of super abrasive products and metal working fluids to suit a variety of applications like grinding, honing, general purpose cutting and the like, the company has introduced basic raw material used for specific abrasives and fused cast refractories. An advantage comes to it in the form of technical support from its parent company, Norton USA which holds a 40 per cent equity stake and is a world leader in grinding technology

Grindwell Norton closed the year ended March 1996 with a sales turnover of Rs 130 crore, up by 31 per cent over the previous year. Other income moved up by 28 per cent. Interest costs were up by 128 per cent. Provision for depreciation moved up by 32 per cent while that for tax was down by 22 per cent. The company ended up with a net profit of Rs 8 crore, up by 32 per cent from Rs 6 crore in the previous year. A dividend of 45 per cent has been supplemented with a bonus in the ratio of 1:1. Exports grew by 50 per cent while imports were up by 87 per cent.

The domestic market for bonded abrasives has been placed at Rs 145 crore, that for coated abrasives at Rs 85 and at Rs 40 crore for super abrasives. The company with a 45 per cent market share is ahead of Universal Carborundum which is in the second place with a 40 per cent market share.

The demand for abrasives has been on the rise in keeping with the boom in the user industries. This segment is slated to grow at a rate of 10 per cent in the coming years. Apart from automobiles and auto ancillaries, which constitute about 40 per cent of the abrasives market, demand from alloy and steel plants, ball bearing and the engineering sector which is picking up is to provide the required boost.

The company has two plants in southern India and one in Maharashtra. The company set up an aluminium oxide plant at Tirupati and a silicon plant at Bangalore, half of the production of which is used for captive consumption.

Grindwell Norton spent Rs 7 crore on modernisation and capacity expansion in September 1995. Capacity was doubled to 3 million square metres. The funds for the

project came through debt and internal accruals. A capacity expansion programme in the bonded abrasives segment seeks to increase it by 30 to 40 per cent from the current 6,500. The company has a Rs 6 crore expansion programme in its industrial ceramics division.

One of the important achievements of the year has been the commissioning of the plant to manufacture fused cast refractories in technical collaboration with SEPR, a Saint-Gobain group company. At present Carborundum is the only company making fused cast refractories in India. The company set up a new plant for manufacture of non-woven abrasives in March 1996 in Bangalore, the first of its kind in the country.

The company plans to introduce a wide range of engineered ceramics for use in the ceramic and glass industries, foundries and steel plants. Several new products were introduced in the market, resulting in a 40 per cent increase in sales. The company is now looking at exports as a thrust area. Norton is to help Grindwell export to emerging West Asian markets in both bonded and coated abrasives.

GLOBAL TELESYSTEMS

Rapid Growth

Engaged in the business of marketing and servicing of telecommunications products, Global Telesystems was set up in 1988. Starting off with a capital of Rs 25 lakh and by distributing telephone instruments, it graduated to fax machines and then diversified into servicing and became a dealer for various telecommunications companies. In 1991, the company went public to raise resources for its expansion and since then two more companies have been added, Global Wireless Technology and Global Telecom Services. In 1994 the company entered telesolutions, offering the customers the entire spectrum of services ranging from system solutions to maintenance. Today the company, one of the fastest growing in the industry, is a leading telecommunications group with expertise in a wide spectrum of activities including marketing, manufacturing and value added services. Its products range from fax machines and cordless phones to pagers, automated fingerprint identification systems and conferencing equipment.

Global Telesystems closed the year ended March 1996 with a sales turnover of Rs 332 crore, up by 58 per cent from Rs 210 crore recorded in the previous year. Other income moved up by 168 per cent. Interest costs were up by 140 per cent. Provision for depreciation and tax moved up by 443 per cent and 198 per cent, respectively, doing little harm to the net profit which was up from Rs 16 crore to Rs 48 crore. Dividend payment has been raised by 0.50 percentage points to 22.50 per cent for the year under review.

he company has a Rs 250 crore expansion gramme on the anvil for which in addition proposed Euro issue it has tied up loans m ICICI and SCICI, EXIM bank and vate finance companies. It has earmarked 32 crore for beefing up of Enterprise work and Software, its division which lertakes turnkey projects and provides sultancy services for systems integrato other companies. Rs 10 crore is to invested in International Global, the npany's fully-owned subsidiary based in uritius, which will help the parent npany in sourcing international business also aid in the export of the company's ducts and services.

Blobal Telesystems plans to sell telecom ducts at a retail level through the tele ps that it plans to set up. It has allocated 30 crore for funding its clients through lease and hire-purchase route while Rs crore and Rs 11 crore have been earmarked working capital margin and repayment existing term loans, respectively.

During the year under review, the company up the Global Telecom Academy to offer hly specialised training in telecommunions and in related activities. The company tied up with Northern Telecom to provide erprise networking and with international npanies like Atlas Telecom and ISOCOR technology transfer of services like ctronic mail, fax store and forward and ctronic data interchange.

NA BANK

ıblic İssue

na Bank is coming out with a Rs 175crore equity issue at a premium of Rs 20 share. The issue, aimed at bolstering the k's capital adequacy ratio from the present 7 to around 12 per cent, is to be launched the third quarter of 1996-97. Pending arance from the government and the BI, the issue is to be lead managed by SBI oital Markets.

he Dena Bank issue follows similar plans four nationalised banks to tap the domestic ital markets to raise equity funds in the rent financial year. These include Bank Baroda, Canara Bank, Corporation Bank Bank of India. GDR issue from the State nk of India and Canara Bank are in the cess of being finalised.

Dena Bank could maintain the 8 per cent oital adequacy ratio on account of two sons. First, a Rs 92 crore bond issue in previous year and second, a waiver of idend payment which helped it to plough k profits and boost its capital. The bank's nity base was reduced to Rs 147 crore after a Rs 136 crore write-off of accumulated losses against capital allowed by the government in the previous year, thus providing a boost to its earning per share. The bank's EPS currently stands at Rs 3.50 and the price/earnings ratio is 8.8. Getting into leasing and hire purchase and introduction of anywhere banking through smart cards are some of the bank's future plans.

CURRENT STATISTICS

EPW Research Foundation

Reflecting the steep hike in petroleum prices, the annual inflation rate, after remaining below the 5 per cent level for 23 weeks in succession, jumped from 4.2 per cent to 5.2 per cent in the week ended July 13. The rise is not RBI credit to the centre shot up to Rs 20,191 crore essentially due to a whopping Rs 22,095 crore rise in ad hocs. The year 1995-96 concluded with 12.1 per cent industrial growth (against 9.4 per cent in 1994-95); the manufacturing sector registered a record 13.7 per cent growth, but mining and electricity showed moderate growth rates. The mid-season credit policy injecting an additional Rs 4,100 crore into the system saw call money rates at historically low levels in July. The easing of liquidity resulted in significant lowering of yield on 91-day TBs from a high of 12.41 per cent in June to 9.21 per cent and then rising marginally to 9 46 per cent in the last auction in July; the yield rate on 364-day TBs also declined.

Kashmir Elections under Delhi-Sponsored Terrorists

A G Noorani

State-sponsored terrorist groups have been used by Latin American dictators to put down dissent. The technique is being used in Kashmir by a democratic government in New Delhi – "to create conditions for a free election" there.

ON July 15, two leading dailies published reports of pronouncements on Kashmir by two politicians neither of whom can be criticised as hostile to the government of India, let alone to Kashmir's accession to the union of India. The Indian Express published the National Conference president Faroog Abdullah's interview to Ritu Sarin in which he roundly denounced the parliamentary poll in the state as "a concocted and rigged exercise". The Times of India published a report of a press conference in Srinagar, on July 14, by Mohammed Maqbool Dar, union minister of state for home, in which he said that "the situation in Kashmir would not have improved to the extent it has but for the contribution of these counter-insurgent groups" - a cuphemism for the state-sponsored terrorist groups who have wreaked havoc in the state. Dar himself admitted that they had "committed gross excesses on the common people". They were sponsored with the specific purpose of making it possible to hold at least a rigged election.

Where this leaves the credibility of the Election Commission and its chief, the Magsaysay award winner T N Seshan, is another matter. But it is stupid of anyone in the country to imagine that the world at large is ignorant - quite regardless of what some ambassadors in New Delhi think it politic to say. It has been a sordid exercise altogether. As the insurgency erupted, albeit aided by Pak-supplied arms, even the proestablishment journalists began lamenting the rigged polls of the past. A good many of them were silent when those frauds were perpetrated. But their lament did not signify genuine repentance. They are back to the old game now, lauding the rigged polls.

Herein lies the relevance of a well documented report by Human Rights Watch/ Asia in May 1996. It is entitled 'India's Secret Army in Kashmir: New Patterns of Abuse Emerge in the Conflict' and is priced at a mere \$ 5. For reasons not difficult to guess, very few copies could reach addressees in the country. It deserves a wide readership in India. (Human Rights Watch,

1522 K Street, NW, Apartment 910, Washington, DC 20005-1202, USA.) The report is based on research undertaken by a lawyer, James A Goldston, who visited Kashmir in January 1996. It is written by Patricia Gossman, a senior researcher for Human Rights Watch/Asia.

The report does not spare either Pakistan or the pro-Pak or pro-independence militant groups, militarily aided by Pakistan. Their excesses are condemned in unequivocal terms, as in all Asia Watch Reports. It is with the new element that we are now concerned. In all more than 60 interviews were conducted including with army, government and police officials. Wherever possible the sites of reported incidents were inspected. The union home ministry and the National Human Rights Commission were provided details of the cases investigated and their response was requested. The ministry's response on individual cases and issues is included in chapter V on State-Sponsored 'Renegade' Militants.

Chapter I provides a summary of the Report, II the recommendations, III the background (it also describes how these renegades came to be used), IV sets out the applicable international law, V documents abuses by uniformed security personnel and an entire Chapter VII is devoted to violations by militant organisations. Important as they all are, it is Chapter V on the state-sponsored militants that deserves particular attention. Apparently, in 1995 the Special Task Force (STF) a counter-insurgency division of the Jammu and Kashmir police, was formed. It is "made up mainly of non-Muslim, non-Kashmiri recruits" and "was formed apparently to create the impression that the counter-insurgency effort had local support". The local Jammu and Kashmir policemen are not involved "largely because they are believed to be sympathetic to the insurgency".

The STF began using surrendered militants. The report's findings bear quotation *in extenso* especially the parts based on actual observation. Chief among the renegade groups is Ikhwan-ul Muslimoon, led by one Koka Parrey. These groups are aided by

Rashtriya Rifles, an army unit set up to fight insurgency. The Report says:

In an interview with Human Rights Watch/ Asia, Gopal Sharma, Inspector General (IG) of police, acknowledged that since August 15, 1995, the government has agreed to pay Rs 5,000 [\$ 143] to any militant who surrendered AK-series assault rifles and varying amounts for other small arms. Sharma also stated that upon surrendering their weapons, the militants were supposed to be sent to designated rehabilitation centres where they would be paid Rs 2,000 [\$ 57] a month for six months. At the time that Human Rights Watch/Asia met with IG Sharma, he claimed that one such centre had been established in Jammu and another was to be created in Srinagar. However, a report by India Today, published in March 1996, noted that no one was lodged at the Jammu centre. Sharma admitted: "There could be some militants working with the security forces as gatherers of information. Koka Parrey's group is 30 strong, may be 100 strong. Militants are 8,000-9,000 strong. Some militants who split with their former allies may be able to get the protection of the security forces'

During the Human Rights Watch/Asia visit to Kashmir in January 1996, we were informed that these groups have been armed by the government. On several occasions, Human Rights Watch/Asia observed members of these groups moving about openly carrying automatic weapons, in full view of security personnel, even though under the government's rehabilitation programme, all surrendered militants are required to hand over their weapons...

The state-sponsored groups operate with impunity. In an interview with Human Rights Watch/Asia, Police Inspector General Gopal Sharma claimed that "surrendering [did] not relieve [former militants] of legal responsibility for their crimes", and that some had been prosecuted, "but convictions [were] hard to come by". However, another police officer responsible for investigating the activities of these groups contradicted Sharma's assertion, complaining that Army and BSF officers had also secured the release of paramilitary force members when they had been arrested by local police. He told Human Rights Watch/Asia: "The government has recruited criminals who loot and steal and extort and these criminals are living in security force camps. This is the third force the renegades. It is completely true that they exist. ... It is 100 per cent true that police investigate crime, arrest individuals and then the army interferes and lets them go so they can work with the army as renegade forces

A witness who was abducted by Ikhwanul Muslimoon forces told. Human Rights Watch that he was detained at a house adjacent to an army Rashtriya Rifles camp at Umarheer, Ahmed Nagar, Baspara, three kilometres from Soura hospital. A Rashtriya KHISS DUNKET STANDS At the entrance to the house. The local Ikhwan-ul Muslimoon commander, Mohammad Ramzan, who had interrogated the witness, apparently lived in the house. Ikhwan-ul-Muslimoon forces identified two women who were cooking in the house as Ramzan's wife and sister-in-law..."

Human rights activists have increasingly come under attack in Kashmir. Between April 1995 and April 1996, two human rights monitors were killed and one critically injured. The impact on Kashmir's human rights community has been devastating. Lawyers who had formerly taken up petitions on behalf of victims of abuses no longer do so out of fear of reprisals, particularly from the mercenary groups. Many have left Kashmir...

Kashmir is an integral part of India, we proclaim incessantly. Why is the Indian Bar silent on these outrages perpetrated on their colleagues in Kashmir? The same can be said about the Indian medical profession. The report says:

Ikhwan-ul Muslimoon forces have been patrolling the Soura Institute and the Bone and Joint Hospital since mid-1995. The local commander is Mohammad Ramzan, a former member of the JKLF who had been arrested by the Rashtriya Rifles in 1995. After that,

companied by other gummen and by army a soldiers wearing Rashtriya Riffee uniforms. Ramzan were a bullet-proof jacket under his pheran [long cloak], as did some others. He told hospital staff that he "wanted to bring discipline to the Institute".

Ikhwan-ul Muslimoon patrols are sometimes carried out jointly with other security forces. Their activities inside the hospitals, including assaults on staff and detentions of staff, patients and visitors, are carried out with the knowledge of BSF forces. who maintain bunkers at the entrances of the hospitals. A Jammu and Kashmir police station is also located at the entrances of the hospitals. A Jammu and Kashmir police station is also located at the entrance to the Soura Institute. Ikhwan-ul Muslimoon forces enter the hospital on a regular basis and patrol in groups of twelve, armed with automatic weapons. They often carry walkietalkies and speak into them in the course of their searches and patrols. They have threatened and harassed hospital staff and patients, looking for militants, and have taken suspects away to 'camps'. One such camp is said to be located near the hospital. at an army base three kilometres away at Bachapora, Srinagar.

Before mid-1995, BSF forces themselves used to patrol the hospital, looking for

militinate. They would combine some superations, known in Region's assessment of the upland be searched. Any staff member or patient who is suspected of being involved with the militants is taken away; sayone who resists or objects is threatened or bestes. In November, Ikhwan-ul Muslimoon forces dragged a surgeon out of his office and kicked and punched him.

At 2.30 pm on January 19, 1996, the day that Human Rights Watch/Asia visited the institute, Ikhwan forces were patrolling the main gate of Soura. Hospital employees stated that their presence was routine and that they usually atood only a few yards from the security bunker. Many hospital employees were unwilling to speak to Human Rights Watch/Asia out of fear. Doctors at the Bone and Joint Hospital complained that they were frequently searched by either armed paramilitary forces, while uniformed forces ringed the outside of the hospital, or by both paramilitary and uniformed Rashtriya Rifles forces.

This technique was tried out by Latin American dictators. It is being used in Kashmir by a democratic government in New Delhi in the name of democracy – in order to "create conditions for a free election" in the state.

Differences within Consensus

The Left-Right divide in the Congress, 1929-39 Reba Som

The book focuses on the Left-Right encounter, identifies the composition of the two groups, studies the social background of the chief spokesmen on both sides, distinguishes their broad points of view on key issues, and analyses their interaction within the overall consensus framework of the Congress.

The Course of My Life

Rs 320.00

Rs 250.00

C.D. Deshmukh

This work is neither an autobiography nor a memoir. It is a judicious combination of both, which records the main events of C.D. Deshmukh's life and career. As a career his is, perhaps, without equal in modern India and must have few parellels elsewhere in the world.

The End-Game in Geneva New Delhi Works against Its Own Treaty

Prafal Bidwai

It is totally illegitimate to disconnect New Delhi's external and domestic discourses and support or acquiesce in the government's disingenuous stand at the CTBT talks while domestically opposing pressures for expansion and exercise of the nuclear option. The calculations that drive the one are completely identical with those that sustain the other. In fact the debate in influential circles in India is no longer about whether or not to sign the CTBT but, after refusing to sign it, how far to move towards developing and exercising the nuclear option.

WHEN the UN Conference on Disarmament (CD) resumed its session on July 29 at Geneva, it became clear that New Delhi had made yet another leap away from its professed commitment to nuclear restraint and disarmament. It threatened that it would block the final 'Ramaker text' (named after the chair of the Comprehensive Test Ban Treaty - CTBT - negotiating committee). unless an article (XIV) in it pertaining to the treaty's 'Entry into Force' was dropped. Blocking the treaty (or walking out of the Geneva talks altogether) has been a demand of India's domestic CTBT opponents and advocates of an exercise of India's nuclear weapons option (non-pejoratively called nuclear hawks here) for some time. It precedes the tabling of the Ramaker text on June 28 and is therefore independent of Article XIV.

The presence of this Article—which makes the treaty's 'Entry into Porce' conditional upon the CTBT's ratification by 44 states, including the five nuclear weapon-states (NWSs or P-5) and the three threshold states (T-3) of India, Pakistan and Israel—1s thus merely a convenient excuse for resorting to the extraordinary action of blocking. The plain truth is that South Bloc has once again succumbed to hawkish pressure. In doing so, it found a crutch: viz, Article XIV. The article is indeed unprecedented in that it imposes obligations on specifically named states, which must be fulfilled before the CTBT comes into force.

It is legitimate to criticise it for making the CTBT a hostage to the possible reluctance of any or some states to sign or ratify it: an inherently worthy measure should not be made hostage in such a way. However, it is not very credible to argue, as India has done, that this necessitates its blocking the treaty, or else it stands to be 'punished' at a future date in keeping with the Article's provision that in case the 44 states have not

signed after four years, the conference will reconvene to "decide by consensus what measures consistent with international law may be taken to accelerate the ratification process".

New Delhi could not be unaware that reading 'measures' as sanctions is at best a dubious legal interpretation inconsistent with the rights of sovereign states under international treaty law. Hence to cover its flanks, it proposed on July 30 an amendment to Article XIV that would free itself and the P-5 and T-3 from an obligation to ratify the CTBT. While unexceptionable in some ways, this is highly unlikely to carry any weight: why should India's amendment be taken seriously when India has declared that it won't sign the treaty even with such an amendment?

By offering this paltry, ever-so-slight figleaf of an amendment, New Delhi seems to have lost an opportunity to drive a package deal: further improvements in treaty text and an explicit commitment from the P-5 that they will not develop or make qualitative improvements in nuclear weapons, in return for amending Article XIV and India's accession to the CTBT. The idea of such a package, according to peace NGOs closely monitoring the negotiations, is by no means far-fetched. In recent weeks, the Non-Aligned Group of 21 at the CD has repeatedly invited India to help harmonise and strengthen the treaty text to secure just such a package. New Delhi haughtily refused, saying it would only talk to the P-5, thus inviting castigation for doing what it often stridently accused the P-5 of doing, viz, negotiating behind closed doors.

IMPROVED TEXT

The Ramaker text already represents a distinct improvement over past drafts. It can be convincingly argued that while it has some unresolved problems, e.g., on veri-

fication, the CTBT in its present form largely meets reasonable concerns that the treaty be located in a strong disarmament context and that it effectively prevent nuclear weapon development and qualitative improvement, i e, that it fulfils its legitimate purpose as a significant restraint measure that could end the nuclear arms race. (See, for instance, articles by T T Poulose, Achin Vanaik and me in Seminar, No 444, my articles in Frontline, October 20, 1995 and March 8 and July 26, 1996, and T B Cochran and C E Paine, The Role of Hydronuclear Tests and Other Low-Yield Nuclear Explosions and Their Status under a Comprehensive Test Ban, Natural Resources Defence Council, Washington, 1995, and various issues of the Bulletin of the Atomic Scientists.) In view of this, New Delhi's objections to the treaty are fundamentally invalid and misconceived, if not downright disingenuous and an excuse for not signing a good treaty.

New Delhi's negotiating tactics and its post-June 20 stand (following the announcement that it won't sign the CTBT in its present form) call into question its seriousness about securing a good, genuinely non-discriminatory and comprehensive test ban. Its move to block the CTBT can provide other CD members too with an excuse to block it - for exactly the opposite reason, viz, to retain the present Article XIV. After all, under the CD's rules of business, all members have veto power and can block any agreement. This would produce discord, chaos and possibly lead to a collapse of the CTBT negotiations. Alternatively, hamhanded US tactics and arrogant official statements could provoke a hostile reaction in India, as seems to be happening following Warren Christopher's July 31 pledge to push the CTBT through. This too could complicate and introduce rancour into the Geneva talks, jeopardising them at a crucial stage.

Unless New Delhi wants precisely this to happen - so that the blame for wrecking the CTBT is not exclusively attached to it - it is difficult to see why it resorted to blocking. That logic would, of course, be perfectly, indeed uniquely, consistent with the role of the spoiler, although I K Guiral has said for the record that India does not want to be a spoiler and ambassador Arundhati Ghose is clear that "we have been trying to be sensitive to those countries who want to go forward". However, our policy-makers are probably underrating the likely consequences of attracting universal scorn and disgust, especially from the G-21 and other nonnuclear states.

Let there be no mistake. However unfair or inappropriate Article XIV might be, India

was in no small way responsible for creating and contributing to the cynicism and despair at Geneva that heightened suspicions and promoted the most narrow-minded and myopic national-chauvinist calculations amongst states such as Russia, Britain, China. Pakistan and Iran which led them to demand that all significant nuclear-capable states be a party to an effective and "global, universal, non-discriminatory" treaty (this being New Delhi's own stated criterion for all good agreements!); that unless all the P-5 and T-3 were on board, the significance of the CTBT would be reduced - in which case, they would seek to retain their own 'national security' options through Article XIV or other means.

India is the only state not to have moderated its stand or offered compromises or concessions on substantive issues during 31 months of CD negotiations. Reprehensible as the NWSs are for inflicting these weapons of mass destruction and a nuclear arms race upon the world, even the US, UK and China climbed down - e g, from exempting lowyield testing to a 'zero-yield' position, or giving up insistence on peaceful nuclear explosions (PNEs). Many other states similarly moderated their once-rigid positions on scope, preamble, verification, etc. India distinguished itself as the only country to have made no such effort. Instead, it hardened its stance in January by moving three extreme amendments which found no takers. India is also the only state at the CD to have opportunistically and suddenly switched the rationale of its reservations on the CTBT on June 20 - from 'universal', 'global' grounds related to the alleged inadequacies of the treaty text to 'national security' considerations as a 'key factor', without explaining what those might be.

This gives India an indelibly unique position as a spoiler of the treaty it itself pioneered in 1954, a status which cannot be whitewashed by belated, paltry concessions of the kind offered on July 30 or by pious homilies about India's 'historic' commitment to disarmament. True, India can cite its role in many initiatives for step-by-step nuclear disarmament: the 1954 'Standstill Agreement', 1963-67 UN disarmament talks, the Five-Continent Initiative of 1986, Rajiv Gandhi Plan of 1988, or sponsorship of numerous UN General Assembly resolutions. However, in each one of them, the CTBT figured prominently as an early, and major, step. In several UN resolutions, the call to end 'all nuclear test explosions' was for decades an integral ingredient of Indian proposals. It is precisely this CTBT - yes, explicitly aiming to end "all nuclear test explosions" in conformity with the Ramaker draft - that India has now turned against.

INTEGRAL LINK

India's stated reasons for so doing are located in 'national security' (Natsec) considerations as well as technical objections to the CTBT, however sincere. This should at once alert all those who have refused or are reluctant to take a stand on the CTBT issue, but who oppose the development or exercise of the Indian nuclear weapons option as well as the domestic hawkish agenda, and who do not wish to see nuclear rivalry grow between India and Pakistan/China. There is an integral link between India's stand on accommodating the CTBT at Geneva and 'Natsec' calculations which have to do with retaining and developing the nuclear option. You cannot oppose the latter without criticising the former.

Regrettably, many peace- and disarmament-minded sections or currents of opinion, including those on the Left, have introduced a false disjunction between India's 'external' stance, at Geneva, and the 'internal' or 'Natsec' logic that favours a movement away from nuclear restraint and accommodation to pressures for developing, deepening, even exercising the nuclear option.

Few such currents have interrogated the 'national security' considerations that South Bloc had in mind and even fewer admit that the term in its present context can only denote a desire to move away from nuclear ambiguity and execute a shift in security doctrines in such a way that the deterrent use of nuclear weapons — which India has traditionally, and rightly, condemned as 'abhorrent' and 'repugnant' — is seen as necessary to national defence, although it was not so seen until just a year ago. (Surely, it is hard to argue that things have changed so qualitatively and rapidly in the past year, but let that pass)

The absence of such interrogation and critical discussion has meant that large numbers of pro-disarmament and antihawkish people have gone along passively with the official, increasingly hawkish, stance and have accepted publicly stated official positions as the sole discourse on the CTBT and nuclear issues. This has resulted in a considerable pressure on, and narrowing of, the 'middle ground' or the position of ambiguity - don't sign the CTBT, but don't test and develop or exercise the nuclear option either. This narrowing is in a sense artificial, but it has created the impression of a strong, across-the-board consensus in favour of the official position, which has now become indistinguishable from the Bharatiya Janata Party line on the subject. Witness the BJP's statements on the issue on June 19, June 20, July 27, etc.

Indeed, there is a clear pattern of the BJP calling the shots. Official statements, whether

opposing the treaty or blocking it, have followed, not preceded, the BJP's own pronouncements and demands. In reality, it is hard to talk of informed consensus on the CTBT issue, much less one shared by the entire political spectrum. But the Left has largely failed to demarcate itself from the Right here and has been reluctant to question the 'Natsec' mindset. Peace and disarmament have only weak, amorphous, ill-defined constituencies — unlike sabre-rattling nationalism, and 'we-must-have-the-Bomb' paranoid chauvinism. The official discourse appears to be dominant, indeed overwhelming so.

Two Discourses

In reality, there is not one but two discourses: the public, rhetorical, elevated discourse that seeks the moral high ground of universal, global disarmament; and the 'realist', 'hard-nosed', 'Natsec'-guided, 'nonattributable', 'deep-background', serious, private, secretive, 'adults-only' or 'menonly' cynical discourse. The two discourses are intimately connected. One can often snatch glimpses of the second in the first. And in the conference circuit of the capital, with its arcane rights of passage and rules of conduct, or in 'private briefings' (on an issue of such obvious public importance!), one confronts it directly, if with some embarrassment, because of its purely cynical, easy resort to deviousness, deception and lack of morality.

Often, the links between the two discourses are directly personal; among the most vociferous opponents of the CTBT and among those who have used every which argument, half-baked fact or excuse to damn the treaty and call for blocking it, are none other than our best known self-confessed hawks, who have for years campaigned 'hat India should exercise its nuclear weapons option. Yet other links can be discovered from a critical look at official statements themselves. For instance, foreign secretary Salman Haider condemned the NWSs on June 20 for their insincerity about banning testing comprehensively, although he admitted that they had committed themselves at least to prohibiting nuclear test explosions. However, he also simultaneously asserted that India won't accept any "constraints on the nuclear option", clarifying that this includes the option to conduct nuclear test explosions! So India wants the freedom to do precisely what it vociferously condemns the NWSs for doing.

New Delhi's criticism of the NWSs belongs to the first discourse, the assertion of India's, right to conduct full-fledged explosions of the Pokharan type is part of the second discourse, even if in an attenuated form. Another giveaway is Gujral's statement on July 8 that our "security authorities do not

hink they need nuclear weapons for the noment". He also told parliament on July 22: 'We do not need nuclear weapons now. Fomorrow, I don't know..."

In its full-blown form, the second, crude-Realist' discourse presents India as a beleaguered state and also as a nation with ispecial destiny, which must play its assigned ole as a superpower in the future, to which ole nuclear weapons are essential. This urnishes the rationale for rejecting the CTBT. The logic runs broadly as follows. India does not receive its due from the world, from the Big Powers in particular. It has to plough i lonely furrow. It is wholly despondent about the prospect of early global disirmament. It sees nuclear weapons remaining currency of power for a long time to come. t must acquire that currency too.

DOCTRINAL BREAKS

The first major break or violent shift of loctrine occurs here: India must 'realistically' accept nuclear weapons as a legitimate currency of power if it wants to emerge as i force to reckon with, with a supra-regional f not global reach, and to be recognised as one of the Six Great Powers of the 21st entury, a la Kissinger, Further, India is arrounded by competing or potentially nostile states, one of which (Pakistan) leveloped broad nuclear symmetry with ndia right under our nose, so to speak. This outs India in a different regional configuration rom, say, South Africa or Brazil (never nind the wars in Angola and Mozambique or the presence of Cuban troops in southern Africa while Pretoria dismantled its nuclear apability, and never mind Argentina, in the second case!)

Given this adversarial security environnent, India has to have a nuclear capability it least strong enough to deter China, despite her geographical advantage of being far closer o main population centres in India than vice versa. Such deterrence is justified. This is where the second big doctrinal break occurs: India must embrace the doctrine of nuclear deterrence which she has always publicly rejected as 'abhorrent' - a doctrine that has fuelled the very arms race it claims to be committed to bringing to an end.

This is followed by yet another doctrinal jump, from 'non-weaponised' or 'minimal' deterrence to unbounded or full-fledged, maximal, deterrence. 'Minimal deterrence' is possible even with India's accession to a CTBT. It is simply indisputable that a CTBT. however stringent, cannot eliminate, even limit, India's proven capability to produce a large number of first generation fission bombs, of the Hiroshima or Nagasaki type. These do not need testing at all. The Hiroshima bomb was never tested. Israel's 100-200 bomb-strong arsenal, widely believed to be effective, has never been tested. Even a self-confessed hawk like Gen K Sundarji is explicit that India can have a "minimal deterrent" effective against China as well as Pakistan even if it signs the CTBT, which he advocates India does.

New Delhi's reluctance to sign the CTBT can be explained only as a consequence of an irrational fear - that the CTBT is the thin end of the wedge with which to destroy India's well-established capability - or an obsessive-compulsive desire to broaden and deepen the nuclear option to include thermonuclear weapons and a full-scale arsenal to match, say, China's, and thus put India in the 'Primary' Nuclear Club, way above the mere threshold level. The first speaks poorly of our diplomacy and quality of political assessment. The second speaks of a collapse into grandiose self-delusion as well as a perverse notion of power projection, for which India has always castigated the superpowers.

It needs no argument to show that developing a full-fledged nuclear arsenal with second-generation (boosted-fission and thermonuclear) warheads and numerous, long-range delivery systems, with all their attendant command, control, communications and intelligence (C-cube-I), infrastructure, will be economically ruinous, socially and politically destructive and will seriously militarise this society, while undermining democracy. Above all, it will lead to a degradation of our security, by driving India into open nuclear rivalry with China (which has been absent so far) as well as potentially with the other nuclear powers. And it will ensure that Pakistan goes in for overt nuclearisation with possible sympathy, if not active support, from the Great Powers. And yet, it is just such a trajectory that our policy-makers have at the back of their minds when they dream their long-term dream about India's evolution into a superpower and invent specious arguments to resist every measure for nuclear arms control, reduction and disarmament.

The third jump, from the actual practice of 'recessed' or 'non-weaponised' deterrence to maximalism, may appear the most violent of all. But the other two doctrinal shifts are no less irrational and dangerous. They mean consciously repeating every horrendous error the NWSs committed while embarking on a nuclear arms race for 'Natsec' considerations which has brought the world to its present overkill capacity and sorry pass. They involve rapturously embracing every single bankrupt, even dangerous, high cold war doctrine to create and inflict upon oneself new insecurities. As Achin Vanaik and I, who share this column, argue in our little book, Testing Times: The Global Stake in a Nuclear Test Ban (published by the Dag Hammarskjold Foundation, Sweden, and Churchquite, Bombay-400 020 available from Madinion Bhota. Rublic Libraty

Maitri Apartments, Plot No. 28, Patpargani, Delhi 110 092, Phone 222 42 33, 243 20 54, Fax 222 42 33), nuclear weapons are a highly devalued, degraded currency of power.

Nuclear deterrence is unstable and degenerative and bound up with a classic buildretaliate-further build vicious circle typical of the arms race. It would be suicidal for New Delhi to adopt it in vainglorious pursuit of superpower status. The unspeakable gutter-level ethics of promoting wholly warped nuclear-military priorities in a country which has the largest number of the world's poor and destitutes and which has an ever-expanding backlog of unfulfilled social agendas, needs no comment.

The short point is this. It is totally illegitimate and illogical to disconnect the two official discourses and support or acquiesce in New Delhi's disingenuous stand at the CTBT talks while domestically opposing pressures for expansion and exercise of the nuclear option. The calculations that drive the one are completely identical with those that sustain the other. That is precisely why the middle ground of ambiguity and 'minimal deterrence'/'nonweaponised deterrence' has shrunk so rapidly in the past few months. The debate in influential circles in India is no longer about whether to sign the CTBT or not, but how far to move towards developing and exercising the nuclear option after having decided not to sign the treaty for questionable and devious, it not wholly spurious,

If the debate is to be brought to a rational plane, and made accessible to popular comprehension and concerns, Indian ambiguists cannot afford to sit idle while the hawks, led by the BJP, run away with the agenda in a blitz of national-chauvinist hysteria and 'Natsec'-driven belligerency. They must take a clear stand critical of New Delhi's external and domestic stands and indeed of all hawks, whether in New Delhi, Washington, Islamabad or Beijing. They have to make an alliance with the only trend of principled opinion that exists here and globally - viz, the disarmers and peaceniks who repudiate the convoluted logic of nuclear deterrence, of security through weapons of mass destruction and of the 'right' to retain them as a legitimate 'option' unrelated to self-defence.

Gift-Wrapping the Reforms Budget 1996-97

BM

It is remarkable that without resiling from any of the reform commitments or conceding anything substantive to the victims of the reform programme in the last five years, Chidambaram has been able to disarm his critics in the United Front, including the Left parties, and even to persuade them to applaud his budget.

P CHIDAMBARAM, union finance minister, is being acclaimed for his skill in packaging in bright and attractive colours his product, the budget of the UF government for 1996-97. He is being complimented for scoring over his predecessor, Manmohan Singh, who let himself be bogged down by following the straight and narrow path ordained by his mentors, the IMF/World Bank combine, and his political master, P V Narasimha Rao. Chidambaram is being given credit for political dexterity, if not economic expertise, in pushing ahead on the same road with greater success.

The Economic Survey Update of the finance ministry released before the presentation of the budget had made the 'reform' commitments of the Deve Gowda government quite clear and explicit. The left component or the UF, already agitated over the austerity measures proposed for government employees and the hike in the prices of petroleum products, condemned the Survey as a slap on the face of the Indian electorate. Chidambaram took the hint and quickly adjusted his stance and related his budget to the complexity of the popular mandate and the Common Minimum Programme of the UF which provides room enough for the 'reformers' to advance their cause. It is quite remarkable that without resiling from the reform commitments or conceding anything substantive to the victims of the reform programme in the last five years, it has not been very difficult for him to disarm his detractors in the UF who have allowed themselves to be persuaded even to pat him warmly for his labours.

The budget for 1996-97 was awaited with much apprehension by a variety of interest groups, economic and political. There was much excited media speculation about the possible rift in the UF. The tension disappeared suddenly after the presentation of the budget. This has established the fact, without question, that the reformers enjoy the upper hand in UF. Those who may have had reservations on the economic policies and objectives of the UF have evidently allowed themselves to be cornered and have acquiesced to the leadership position of the reformers in the government. The Left parties seem to have been left with nothing in their armoury except populist pretensions which they may put on display occasionally to protest against direct attacks on their already small mass support base which is bound, therefore, to shrink further when their responses on economic policy issues are seen even by their followers to be ambivalent and equivocal. Also bound to be weakened is their ability and will to mobilise the masses for struggles even as the fundamental contradictions between the interests of the working people and entrenched vested interests, Indian and foreign, who exploit them become more sharp.

The multinational corporations and Indian big business too, after securing many advantages from Chidambaram's budget, have some grouses and there is no let up in their pressure for more incentives. They evidently regard the cuts in customs and excise duties proposed in the budget without the conventional condition of passing on the benefits to the consumer, which has never been observed or enforced in practice, as their inalienable right in the liberalisationglobalisation era. But they are vigorously questioning the proposal for a modest tax on the fast-growing zero-tax corporations and the 2 per cent increase in customs duties to collect funds for improving infrastructural facilities. Chidambaram is, therefore, already under intense pressure to show more accommodation to the interests of business corporations, Indian and foreign. The talk of a level-playing field is indeed irrelevant in the context of the proposed international investment treaty which stipulates conformity to "national treatment in respect of market access and security for international investors".

It is not without significance either that even though Chidambaram has not brought down the peak rate of customs duty he has made wide-ranging cuts in tariff on import of material inputs and services which will be taken full advantage of for increasing the profitability of established industries in which foreign interests have significantly enlarged their stake in the last five years. The objective of the tariff reform is to promote at a fast pace integration of the Indian market with the global market. The misgivings of sections of Indian industry on unfair exposure to competition of multinational corporations in the domestic market have not been as rudely brushed aside as Manmohan Singh was wont to do. But Chidambaram is not letting such sentiments override the globali-

sation objectives of the reform process. The cuts in customs duties add up to much more than what a reduction of peak rates overall by 10 per cent could have achieved. It is also significant that even as Chidambaram has taken credit for additional resource mobilisation for the government of about Rs 2,500 crore and marginal increases in central budgetary provisions for rural development, social sector and welfare measures and proposed large excise concessions for industry, the drive for promoting the market to meet the consumption demand of the elite in Indian society and for multinational corporations and their Indian partners to exploit has not slackened and should actually be expected to gather momentum even as the mass of the people with poor purchasing power will be squeezed out. The only merit of the tax proposals is that large-scale loss of revenue for the government has been avoided so that the revenue deficit may not be enlarged.

Rural development has been fervently proclaimed as the first priority of the UF government. But what has been really aimed at is promotion of commercial agriculture with attention focused on large landholdings and gentlemen farmers and the entry of Indian business corporations and MNCs into agriculture. A series of measures have been taken in this direction. For Chidambaram coolly to extend, in the name of assisting the poorest of the poor, the subsidy on tractors which was so far limited to small and marginal farmers, who could not have taken advantage of it anyway, to all farmers and thus legitimise tractor purchases at subsidised prices is really remarkable. The zeal with which the reform process is being attempted to be extended to agriculture is further emphasised, above all, by the credit facilities which are proposed for the 'humble farmers' which is really a cuphemism for the commercial farmer. If the IMF/World Bank reforms for the industry sector initially subdued the domestic impulses for industrial growth and subsequently, with multinational corporations invited to be the main players, distorted the growth profile based on a shrinking soical base, the extension of these reforms to the farm sector is bound to be disastrous on all counts, economic, social and political. Already in 1995-96, a year of a good monsoon, growth of agricultural production was down to 2.4 per cent and crop production to as low as 0.9 per cent which is way below the rate of growth of population. This should bring home to all concerned that the socalled green revolution based on irrigated areas, viable farmers and subsidised chemical fertilisers has touched a plateau and has played itself out so far as further growth of agricultural production and productivity is concerned. The shrinking of the social base of farming on which small and marginal farmers subsist, and strengthening the role of gentlemen farmers and their nexus with business corporations, including MNCs, in the farm sector will disrupt the rural economy and hit hard the poor farmers, farm workers and artisans. It will aggravate economic

leprivation and social tensions beyond the endurance of the patient and long-suffering people in the rural areas. The idea that credit available through NABARD and small private banks to rich farmers for commercial farming will give a boost to agricultural production is fanciful. The majority of the rural population will not enjoy access to credit from these institutions. There is no significant step up in budgetary allocations for rural development and welfare schemes either. What has been done is to rearrange schemes and budgetary allocations in the hope of deriving political gains. Chidambaram concluded his budget speech by a call for more reforms and more growth, albeit with more compassion. Translated into policy terms, it actually means more vigorous effort to attract foreign capital on a scale far larger than in the last five years of reforms and extension of the reforms to the rural sector to promote commercial farming. Compassion in this reckoning is surely not the empowerment of the people with right to the land they till and gainful employment opportunities for farm labourers and artisans. The ruling elite seems to be excited only by the familiar paternalist-populist impulses for inconsequential give-aways of public funds to selected groups which simply do not reach them and are picked up on the way by persons in authority and influence-peddlers. Look at the pitiful provision in the budget of Rs 5 crore each for porters, old age homes and residential schools for the poor.

The question of rebuilding the economic intrastructure and modernising it is supposed to have been a priority for Chidambaram's budget. To the already existing financial institutions, two more are proposed to be added to facilitate the inflow of foreign investment for the development of modern infrastructure. The experience of the last five years, however, is that MNCs are interested essentially in the exploitation of Indian labour and consumers. The inflow of direct foreign investment to set up production capacities and infrastructural facilities has been tardy and on terms and conditions (such as guarantees of security, counterguarantees for high rates of return and their quick repatriation) which eliminate all risks for foreign investors and the costs tend to be even higher than of commercial borrowing. While direct foreign investment has been eagerly awaited, further policy adjustments have now been made for the inflow of hot money for speculative trading in stocks and shares. But lags in the development of economic infrastructure have only become more and more intolerable in the last five years.

In the scheme of Chidambaram for building and strengthening infrastructure for economic growth, the role of industrial enterprise in the public sector is totally missing. The dilution and eventual elimination of public sector industrial and commercial enterprises is indeed the major aim of the IMF/World Bank reform programme. It seems to be beyond the comprehension of the IMF/World Bank tutored reformers in India that direct investment by the Indian state in industrial and commercial enterprises in the planning era pioneered the establishment of modern

infrastructural facilities and capacities. The production of vital inputs, such as heavy engineering and machine-making, intermediate goods, among them steel, aluminium and metals, oil exploration, refining and marketing of petroleum products were taken up on this basis. This was indeed the only option available and a solid basis for industrial development in India. Further expansion of industrial enterprise in the public sector, nursing of its managerial abilities and technical expertise, removal of bureaucratic control and interference which could have enabled its full potential to be exploited for the rapid development and modernisation of the Indian economy are, however, no part of the economic reforms launched in 1991. On the contrary, industrial enterprise in public sector has been attempted to be smothered. It may not be amiss either to mention that investment in public sector industrial undertakings and public financial institutions played a major role in the development of private industry, both large-scale corporate and small-scale, as well through the supply of first rate inputs at subsidised prices. Those who condemn the inefficiency of industry in the public sector for not making high profits forget that but for price controls, strictly observed, for the supply of goods and services in the domestic market at cheap rates, often at less than the cost of production, public sector undertakings could have extracted huge profits from private industry and Indian consumers. Even in the so-called reformera of liberalisation and globalisation, the public sector is still being decreed to supply its goods and services at controlled prices for lower than what is allowed to private Indian and foreign suppliers. The price of crude oil for ONGC and electricity from the State Electricity Boards are cases in point. The past five years, however show that while waiting for MNCs to invest in the development of infrastructure, including the critical energy sector, public sector capacities have been kept idle even while their profits as well as funds raised by selling their shares at throwaway prices have been used for the current consumption of the government. Chidambaram has chosen to tread the beaten track by further cuts in public investment and squandering the existing productive assets for current consumption of the government. He has not honoured even the stipulation in the Common Minimum Programme to use the Rs 5,000 crore to be raised by disinvestment of the shares of public sector specifically for technologically upgrading the public sector and for education and health services. The starting point really for any meaningful effort to develop and revamp infrastructure for economic development is to utilise the full potential of the public sector industrial undertakings. The private industrial enterprise and foreign capital has to be drawn in for only a supplemental role.

The inflationary pressures which have been dormant for some time will admittedly be felt strongly in the current year. The finance ministry officials expect that the inflation rate will rise to 6 to 7 per cent in the coming few months. This seems to be an optimistic assumption. More significant, however, is

that a rise in the inflation rate has been proclaimed by them to be a concomitant of the growth process in the market economy and as unavoidable. But the position of the Left parties on the question of prices, in particular their more articulate trade unions, is curious. They are clamouring for price controls for all essential commodities of mass consumption. This presupposes an elaborate system of administered prices which totally contradicts the philosophy and concerns of the market-oriented economic reforms to which the Deve Gowda government is unreservedly committed.

The question of inflationary pressures and management of the structure of relative prices is, therefore, bound to cause much triction between the constituents of the United Front in the coming months. But what must not be attempted to be obfuscated is that the official policy prescription for promoting economic growth also requires active measure for the development of the market for goods and services of elitist interest which alone can attract foreign capital. Investment priorities, price adjustments and fiscal incentives will be accordingly determined. The selective reduction in customs and excise duties proposed in the budget only emphasises this position. The protests of the Left parties and TUs against the 'antipeople' austerity measures and the price adjustments have been weak and ineffective and will remain so if they remain associated

with the UF government.

Mindful of the resources constraint and political fragility of the Deve Gowda government, Chidambaram had to do a lot of tightrope walking. His options were limited and he has wisely chosen to put off more complex issues by the time-honoured method of appointing an Expenditure Commission, a Tariff Commission and a Disinvestment Commission for public sector enterprises. In addition he proposes to come forth with a paper for discussion on subsidies and hold fresh consultations with the Reserve Bank of India on the elimination of ad hoc treasury bills, that is created money, to finance the expenditure of the government. The opening of the insurance sector for multinational corporations too has been deferred. In many ways, therefore, Chidambaram has presented what may be called another 'interim budget' to be updated as he goes along during 1996-97 and beyond. That Indian economy will grow at 7 per cent and the rate of inflation contained at 6-7 per cent should be treated as only hopeful projections. The estimates of revenue and expenditure, with the fiscal deficit at 5 per cent GDP, need not be given much credence either. Chidambaram has been well-advised not to say or do anything which may endanger the survival of the Deve Gowda government. But he is neither willing nor able to weaken or disrupt the ongoing economic reform programme to which he is fully and firmly committed. The question before those, including the Left, who are associated with the Deve Gowda government, however, is whether they have been wise to hitch their wagon to a rickety political arrangement and in the process marginalise their relevance, especially in the vital economic policy-making arena.

Extremist Challenge and Indian State

Case of Assam

Hiren Gohain

The ULFA phenomenon is the product of the total alienation of Assamese youth from the Indian state. The vast majority of young people find in the Indian Constitution no guarantee of a right to a reasonably decent life. But the support for ULFA does not mean necessarily support for secession from India. The weakness of the Assamese national base has made it impossible for the ULFA to formulate a programme for national reconstruction. And in the past, it was easy for Congress(I) governments at the centre to find support among the conglomeration of ethnic groups and maintain a semi-Fascist regime by suppressing the Assamese with virtual army rule. Given this, talks initiated by a genuinely democratic government sympathetically aware of the crisis of the Assamese nationality but capable of firmness when it degenerates into chauvinism is the best hope of solution to the problem posed by ULFA.

THE hottest question in Assam today is whether talks between the government and the ULFA will materialise. The AGP ministry has time and again offered to talk to the militants without pre-conditions, only to come up against a deafening silence. From the very beginning the ULFA did not appear keen on talks, partly because a section among them considered any kind of talks a sell-out, partly because the last time such talks were held the negotiations seemed only to advance the personal interests of the 'surrendered' (sic!) ULFA. Yet the people of Assam are overwhelmingly in favour of a dialogue between the government and the extremist organisation, and sharply hostile to the line of extermination popular with certain sections of the central government and the army. That does not mean that they are eager to endorse widespread extortions and sundry killings by ULFA in the name of revolution. Now it is this ambiguity in the Assamese response to the extremist challenge that outsiders, whether resident in Assam or not, find exasperating.

To the common man in Assam the machinery of the state appears only as an instrument of repression and exploitation, and the ULFA enjoys grass roots support to the extent the expectations from the state are frustrated. Most of the primary health centres of the state are without any stock of medicine. The harassed doctor prefers leaving the PHC in the lurch to facing the wrath of deprived villagers. Annually gastro-enteritis claims hundreds of lives among the poorer sections of the people. In the tea-gardens healthservices are not under the health department of the state government, but under the labour department, which happily ignores the fact that in certain gardens making crores of rupees in profit there is no qualified physician in charge of the garden hospital! This year, as on earlier occasions, floods have affected the lives 30 lakh people, destroyed standing crops on two lakh hectares of land, and taken a heavy toll of human lives and livestock. When floods recede, the rural economy over large parts of the state seems to be devastated. Nearly one-third of the industries in the state are 'sick', and lakhs of unemployed youths who cannot afford the high price of jobs in the informal job-market managed by corrupt politicians, officials and their brokers, and who lack even the small capital required in small business, look up to the ULFA. Some of them join in sheer desperation. An unexpected fall-out of this situation has been the phenomenal increase in criminal activity among youths and adolescents. Recently the police foiled the grandiose plans of nearly a dozen school students who planned to leave home under the pretext of joining the ULFA only to receive training in the use of fire-arms from professionals with the eventual objective of setting up a gang of robbers. The incident was reported from the oil-town Duliajan, but it might have happened anywhere in Assam.

It is no surprise therefore that funeral ceremonies of ULFA cadres killed by the army or the police are attended by thousands of people in the countryside. Recently when the police killed a member of the ULFA from upper Assam in a shoot-out near Nalhari in lower Assam and took his dead body to the local police station, thousands of villagers milled around the police station and forced the OC to hand over the body to supporters of the ULFA. One is not certain what proportion of such supporters will go the whole hog, to the point of supporting secession from

India. Since a referendum is at this stage impracticable, the question remains academic.

This bleak scenario is unknown to the outsiders, even those settled in Assam, who make it good in trade and business. Using a very simple logic they reason that the local people fail because they are lazy and drawn by prospects of easy money, leaving out the question of social milieu and training that motivate individual behaviour. The nature of the economy, dominated by outside capital and skills in tea and wholesale business and in industries that thrive on plunder of natural resources of the state, does little to foster local initiative and industry, as the local people play only a marginal role in them. The state government, dominated in its turn by a bureaucratic and feudal ethos, also does precious little to change the mind-set of the people. The centre-state relations, as they have developed so far, leave little scope for efforts to lift the state up by the boot-straps. In any case, the political culture of the state in an environment of persistent stagnation tends towards plunder and nepotism rather than development. The frustration of the youths has naturally found expression in acts of violent rebellion and terrorism. Pace the favourite line of government propaganda, the ULFA simply cannot be dismissed as a band of anti-socials and goons. (To cite an instance of the way present-day political culture subverts development in the state, the AGP government is reportedly proposing to appoint as chairmen of the scores of semigovernment and autonomous development corporations in the state all their MLAs who have been denied a ministerial berth, even though many of them have not the faintest idea of the work in which they are supposed to provide leadership!)

The ideological immaturity of the ULFA, which had carried away the dying embers of the militancy of the Assam movement, has attracted the scorn and ridicule of established Left parties. They are now waking up to the necessity of ideological orientation, and in the process of acquiring the trappings of a Marxist-Leninist system of ideas. To some extent they have received help from Naxalite splinter groups, though they try to adapt Marxist ideas to the overriding goal of 'liberating Assam from Indian imperialists'. For some time there was even division of labour between city-based journalists taking charge of the ideological work and militant activists carrying out concrete revolutionary tasks - a patently unmarxist idea. Unfortunately its revolutionary activity appears to be largely confined to political assassinations, abductions for hefty ransoms, extortions and intimidations. Only occasionally have there been attacks mounted on the Indian army. The army in its turn has cast wide its intelligence net, and it often gathers accurate information about the whereabouts of the ULFA cadres. Several middle-level ULFA leaders have been caught or killed with a view to putting the fear of the state in the minds of the local people. People deeply resent the combing operations of the army which treat them as already guilty of treason. Now and then there are also confirmed reports of rape and torture of innocent suspects. Political parties dislike the whole business but prefer to keep quiet as they themselves are repeatedly threatened by the ULFA for siding with 'the Indians'.

Shortly before elections the district SP of the Tinsukia district travelling with a heavily armed escort was gunned down by the ULFA in a well-planned guerilla-style operation, though the reasons for the attack are still not clear. The Congress candidate from the same constituency was also killed a little later. Likewise, a former minister in Hiteswar Saikia's cabinet along with nine armed guards (all of them from poor families) was murdered on the road. It puzzled many at that time as to why the ULFA was queering the pitch for the AGP, which it used to regard as a friendly party. Perhaps those acts were calculated to terrorise the thugs and ruffians the Congress(I) candidates in their love for democracy had gathered around themselves. However, those acts not surprisingly, put the army on their trail. The army arranged some gruesome acts of counter-terror, particularly after a couple of army officers were ambushed in the Kamakhya temple, a well known tourist spot.

Recently a dedicated ULFA leader of Rangiya, Torun Deka, whose family of poor farmers has reaped no economic benefits from his activities despite his high rank in the outlawed organisation, was killed in cold blood by armymen, according to eyewitness reports. The 'interrogation' of suspected ULFA supporters in army camps is so 'intense' that it has left quite a few crippled for life A few have died shortly after their release from those camps.

Another group disturbed by the shaky Congress(1) prospects in the assembly elections was the SULFA, or 'surrendered' ULFA cadres. Many of them had, with help from late Saikia, then chief minister, muscled into coal and timber trade, amassing huge fortunes with goonda-tax. A few had forgotten to deposit huge amounts extorted from tea-gardens and other businesses with their original ULFA linkmen. Since some of them joined the army in its campaigns against the ULFA as escorts, scouts and informers, there was no love lost between them and their former comrades. In the Nagaon district the ULFA killed and buried in makeshift graves seven SULFA men, said to be innocent of any anti-ULFA designs, in brutal retaliation against such SULFA help in detection and murder of ULFA district leaders like Prabhat Saikia. While the late Hiteswar Saikia and his sycophants proclaimed the 'return of peace to the state', in fact there were more than a thousand murders during that time, many of them with political overtones. Bimal Bhuyan, an ambitious student leader who became close to Saikia and appointed by him the director of publicity for the state was killed in broad daylight. Lachit Kolita a former Congress(I) youth leader formerly on ULFA's hit-list later fell out with Saikia and soon after met a gory end. Cotton College, premier institution for undergraduate education in the state, and with several departments running PG classes as well, became a hotbed of politics when Saikia started bestowing political patronage on certain student leaders. The result was a spurt in political violence, which cost a student, Uttam Barua, his life. Thus during the period before the elections there were allegations of the Congress(I) government of the state calculatingly creating an atmosphere of insecurity and violence in the state. The ULFA in its turn was more or less on the defensive, making people forget their own blood-spattered record during the AGP regime.

Against this background there took place the murky business of the murder of Parag Kumar Das, an ambitious, fiery and talented journalist and human rights activist, who had not only become a spokesperson of the ULFA but also the voice of the angry and frustrated youth of the state. On May 17, as he was waiting outside a school to collect his young son and escort him home, he was knocked down by a deadly hail of machinegun bullets. His dead body was followed to the cremation ground by thousands of outraged and grief-stricken people. Agitated friends and supporters demanded immediate detection and arrest of the murderer. Under intense public pressure the police revealed that they had conclusive evidence of the identity of the culprit, alleged to be one Prafulla Bora, a SULFA hitman. Mysteriously the police also stated that certain high-ranking police officers of the state had intervened to release the culprit from police custody and help him to escape! Despite this extraordinary revelation the high-ranking police officers said to be involved in the escape of the suspect have not been suspended and chargesheeted. There have been a spate of rumours linking the murder wih the army intelligence. the RAW and even the ULFA! The situation has become more intriguing with the suspect claiming from his hide-out that the police were falsely accusing him and were planning to bump him off to protect the real culprit.

Incidentally these events have lifted a corner of the veil that has hidden the deep and strong links forged between sections of the police and assorted anti-socials during the Congress(I) regime. In fact the moment

it became clear that the AGP was winning the assembly elections, both the chief secretary of the state and the DGP of the state police hastily applied for leave and sought shelter in Delhi. During the regime of the ruthless Congress(I) CM, Saikia, several high-ranking senior police officers were allegedly involved in harassing and torturing Saikia's opponents, and further, were also suspected of involvement in a few kidnappings and murders. With the flight of the top-ranking officers and change in political leadership of the state government, the police now stand thoroughly demoralised. with hardly any spirit left to bestir out of their thanas. They are hardly in a position to look after law and order in this chaos. Army withdrawal, the main demand of the ULFA and their friends, will only compound this dangerous confusion.

ARMY CAMPAIGN

The army's campaign against the ULFA has put the AGP government led by Mahanta in a serious quandary. Given the current paralysis of the police, the departure of the army will leave a vacuum inviting not only the carbine-toting ULFA, but all manner of ruthless, rapacious adventurers and lawless elements. On the other hand, it is reliably learnt that the ULFA had lent its considerable support to the AGP during the last elections. MLAs who won by grace of ULFA were obliged to put pressure on Mahanta to send the army back. In fact, even before they formally took the oath of office the AGP leaders had met the governor of the state to demand withdrawal of the army. But once Mahanta found himself in the CM's seat, he developed cold feet. The army also forced his hand by intensifying its campaigns at that point and compelling him to take a stand. Mahanta, a past master in the contemporary politics of manipulation, can seldom be pinned down on any vital issue, and he always gets away with bland generalities. But this time, very much against his will he was forced to concede that the army had a role in maintaining peace.

Yet the situation does not warrant giving the army a clean bill. It also launches propaganda barrages from time to time. A few months back it organised a seminar on human rights in Calcutta. It has held a number of press conferences in Assam explaining the army's attitude, and presenting before the public alleged evidence of the ULFA's involvement in narcotics smuggling and gunrunning. But people are still far from convinced, many dismissing such evidence as manufactured. Again, the army itself recoinmends in the same breath a 'political solution' to the ULFA problem. It is not clear what the army means precisely by that. One hopes it does not mean the government's assistance in those illegal activities in return for peace. youth organisation of the state, the AASU, has been forced by the vehement protests of its grass roots members to demand withdrawal of the army from the state, though the AASU has always maintained its clear opposition to the ULFA. Privately, however, the leaders of AASU remain sceptical about the wisdom of that demand.

Faced with the storm of public indignation and protest against army excesses, chief minister Mahanta announced that while he was for removing the army from the scene, only the central government had the authority to do so. When it was pointed out that the army was bound to act in consultation with the civil administration of an elected government, he shifted his ground and admitted that the army could not be withdrawn as long as the countryside remained plagued by individual terrorism and extortion-drives. This was at first widely condemned as typical doublespeak. But gradually sensible middle class opinion veered round to his support.

However, Mahanta's refusal to send the army packing had the friends and supporters of the ULFA up in arms against him. The Manav Adhikar Sangram Samity (MASS) which was openly pro-ULFA and which used to be led by the fiery Parag Das, demanded a categorical assurance from Mahanta, who refused to oblige them. The MASS also made an issue of the Mahanta government's failure to nab Parag Das's killer. While the MASS had been vociferous in its support to Mahanta before the elections and played a significant role in isolating his rival former home minister Bhrigu Phukan from the rank and file of AGP (Bhrigu Phukan had been the other most prominent leader of the Assam movement, which had given birth to AGP), it now declared him a traitor to the cause of Assam. In fact Mahanta's police lathi-charged MASS demonstrators in front of the Janata Bhavan at the state capital Dispur, when they demanded that the chief minister should come out in person to talk to them, a demand Mahanta found inappropriate. Thus, MASS and AGP came to a parting of the ways. The AGP, which included a demand for 'selfdetermination for the Assamese' in its election manifesto, apparently under pressure from ULFA, now declared a loss of confidence in the MASS and instructed its members to keep away from that organisation. Mahanta clearly stated that secession from India was not on the agenda, and that the AGP was a 'regional party with a national outlook'. Thus, Mahanta, who only a short while ago had aroused the fears of certain circles that he might stoke up secessionist militancy, almost overnight became the custodian of the sacred Indian constitution in Assam. The ULFA C-in-C,

puppet from which Assam could expect • nothing.

These twists and turns have left the people thorougly bemused. The blood-stained confusion has exposed all political rhetoric as hollow. The middle class, which has for long regarded ULFA as the last bastion of Assamese interests, has now grown tired. There is an increasing desperation in the clamour for resumption of talks with the government. The Naga NSCN (Muiva group) has also appealed to the newly-installed UF government in Delhi to settle the question of the north-east through talks. The author of this article was in the unenviable position of receiving a dire warning from the ULFA a month or so back for opposing the ULFA line. To his grateful surprise meetings were held in different corners of Assam, including places in the heart of ULFA's base areas, condemning that warning. It is here that the situation in Assam differs from that in Jammu and Kashmir or the Punjab. The democratic voice in Assam defied the terrorists, and kept on criticising the ULFA in spite of the grave risks. Thanks to those protests from democratic quarters one of the top ULFA leaders spoke to the author on the phone and assured him that no such threat had been intended. The author of this article seized the opportunity to press the young leader to consider the option of a dialogue with the government. The ULFA leader (the redoubtable Paresh Barua, in fact) said that talks had not been ruled out, but as a political organisation the ULFA too had to take decisions within certain practical constraints

A few days later Mithinga Darmari, the publicity secretary of the ULFA, announced that the organisation was agreeable to holding talks, provided (1) they were held in a third country, (2) there were UN observers present during the talks, and (3) they were specifically on the subject of 'a sovereign, independent Assam'. Unfortunately at about the same time the union home minister Indrajit Gupta declared equally stoutly that talks could be held only if the ULFA abjured the path of violence and accepted the Indian Constitution. At this point Mahanta showed rare initiative to break the stalemate, and apparently persuaded the prime minister to agree to talks "without any preconditions". The ball now seems squarely in the ULFA's court, though there is an undercurrent of anxiety regarding the veracity of Mahanta's claim. Likewise there is also an anxiety that the uncompromising stand of the two district committees of Nagaon and Nalbari, both hostile to any negotiations with the government, might undermine the prospect of talks eventually.

The ULFA phenomenon is thus the product of the total alienation of frustrated Assamese youths from the Indian state. While the older generations are bound by memories of the

meeuom struggie to the rest or mura, and the children of the privileged sections are attracted by career opportunities in metropolitan areas, the vast majority of young men and women find in the Indian Constitution no guarantee of a right to a reasonably decent life. The persistence, indeed aggravation of the colonial pattern of underdevelopment in the state, with the Indian state filling in the void left by the departure of British imperialism, has provoked this type of response. To be sure the Indian Constitution also allows a certain measure of self-government to the states. But in the absence of a proper strategy of development for neglected regions in the centre where power is concentrated, a set of power-brokers have arisen in the north-east without any concern for genuine regional development. Since their given task is to act as watchmen of so-called all-India interests, they too let their own people down by sabotaging future development of the region. This is the background for the fairly widespread support for the ULFA among the people in Assam, even though independence from India is not a very popular goal. Despite certain terroristic, indeed criminal distortions in the activities of the ULFA, it still represents a genuine sense of injustice and exploitation.

But the weakness of the Assamese national base, with numerous ethnic groups suspicious of Assamese hegemony and no longer willing to find a greater common identity in Assamese nationality, and vast numbers of immigrants disturbed by the ambiguity in their heritage and position, has made it impossible for the ULFA to formulate a programme for national reconstruction. The central government is making the best of every such opportunity to sow discord among conflicting ethnic groups at moments of its choice. Indeed, it is possible for a Congress(1) government to find support among such a conglomeration of ethnic groups and communities and maintain a semi-Fascist regime by suppressing the Assamese with black laws and virtual army rule, as the late Hiteswar Saikia did. Elements in the bureaucracy in Delhi, indian big capital and state-sponsored Indian intellectuals probably find nothing wrong in such a perspective. But such a set-up is a perfect mockery of democracy. On the other hand the ULFA's dream of 'a sovereign, independent Assam' also appears to be a mirage, given the political and economic weakness of the Assamese middle class, who spell out that dream without sharing the sacrifices of the cadres. Under the circumstances, talks initiated by a genuinely democratic government, sympathetically aware of the crisis of the Assamese nationality but capable of firmness when it degenerates into chauvinism, is the best hope of solution of the problem posed by the ULFA.

Archana Guha's Fight for Justice

Biren Roy

After 19 long years Archana Guha who barely survived police torture as a suspected naxalite has received 'justice' – her torturer has been sentenced to a year's simple imprisonment!

THE proverb goes, justice delayed is justice denied. But at least partial justice has been done in Archana Guha's case though justice was delayed for 19 long years. It may be recalled that Runu Guha Neogi, former deputy commissioner of police under West Bengal government, earned notoriety for his alleged torture of the naxalites in the early 1970s. Guha Neogi was responsible for torture of Archana Guha, one of the worst victims of torture in post-independence period. Archana Guha's case became well known not only in India but also at international fora.

The seventh metropolitan magistrate of Bankshall court, Calcutta, sentenced Runu Guha Neogi and a co-accused constable to one year's simple imprisonment and fined them Rs 2,000. In case of failure to pay the fine, the jail term would be extended by another two months. Two other accused had died during the trial while another is still at large.

The gruesome incidents of Archana's case began on July 17, 1974 when a police party led by Runu Guha Neogi raided Archana's flat in search of her brother Soumen who was in hiding. The police picked up Archana, her sister-in-law Latika (Soumen's wife) and a family friend Gouri Chatterjee who happened to be there by chance. Archana was head-mistress of a junior high school at Howrah, and Latika was a college teacher. They were taken to a 'special cell' at Lalbazar, Calcutta police headquarter. This cell was created to deal with 'naxalite prisoners' and was known as 'torture chamber'. These prisoners were subjected to 'third degree' methods for three days in Lalbazar lockup to extract confession. Torture inflicted on Archana and other women was severe and inhuman. As a result, Archana's lower limb got paralysed. She survived, though detained under difficult conditions.

When the Left Front government led by the CPI(M) assumed office in 1977 in West Bengal, most of the political prisoners including the naxalites were released. Archana came out of the jail in a wheelchair.

Archana Guha is not the only person who was subjected to inhuman torture in those days. But it is Archana and her family who were bold enough to file a case against Runu Guha Neogi and others in the metropolitan magistrate's court at Calcutta. Then begins a history of protracted trial. Guha Neogi

resorted to every legal step to delay the case. It was delayed due to appeals in session court, Calcutta High Court and the Supreme Court. This case is one of the longest trials in the state judicial history. Ultimately, in 1994, the Supreme Court ordered the trial court to conduct the trial expeditiously.

In the meantime, with the help of Amnesty International, Archana was sent to Denmark for her treatment in 1980. The Left Front government also extended monetary help for her journey. In Denmark, Archana received treatment of her ailments and was married. The Association for Protection of Democratic Rights (APDR) from the very beginning of the case demanded suspension of Runu Guha Neogi and made repeated representations to different authorities of the Left Front government. But the Left Front government instead of suspending Guha Neogi, then a sub-inspector, promoted him to the rank of deputy commissioner of police from which he retired in 1992 with full retirement benefits.

During the long trial of 19 years, the family suffered much. Besides the family, eminent lawyer like Arun Prokash Chatter (foriner standing counsel of the Left Front

government) and others worked selflessly for conducting the case. The APDR helped the conduct of the case in various ways. It considers a moral duty to extend its help in Archana's case as it does in many other cases. In the last leg of the case, the argument on behalf of Archana was taken up by her brother. Soumen — this was no doubt praiseworthy.

The judgment was delivered on June 5. In the judgment, the judge said he was convinced that the torture had been carried out on the instructions of the accused, Runu Guha Neogi. The judge further said that the police officers under the instructions of the accused threatened Archana that if she failed to reveal details about her political activities, four drunk men standing outside the Lalbazar torture chamber would rape her.

Guha Neogi was on bail throughout the trial; even after the sentence, his bail term has been extended. He has preferred an appeal to a higher court against the judgment of the metropolitan magistrate. So, final outcome of the case is yet to come.

Inflicting torture or injury to any person by the guardians of law is a gross violation of basic human rights according to international covenant to which India is a party. Guha Neogi is guilty of violating basic human rights. The judgment, though not harsh, has vindicated the common man's cause for protecting human rights. It will surely embolden the common man to stand up in defence of human rights against the guardians of law and order who resort to various kinds of repressive measures against the common man nonchalantly and with impunity

INDIAN INSTITUTE OF EDUCATION.

128/2, Kothrud, Pune - 411 029

The Institute invites applications for the post of Director, State Resource Centre for AE/NFE.

Qualifications:

Master's degree (I class or II class with Ph.D.); 5 to 7 years' experience in literacy work/nonformal education; command over Marathi and

English.

Age Limit.

40 to 55 years.

Last date for receiving applications: 31st August, 1996

(Conditions relaxable for exceptionally able/experienced candidates) Contract Pay: Rs. 8000/- p.m.

Gandhi-Ambedkar Interface ...when shall the twain meet?

Suhas Palshikar

Gandhian and Ambedkarian discourses are not antithetical. Both are concerned with the issue of emancipation. At present when the legitimacy of the emancipatory discourse is being challenged, and the dominant discourse upholds capitalism, it is all the more essential to broaden the scope of Gandhian and Ambedkarian discourses.

GANDHI and Ambedkar would have agreed on as many issues as they would have disagreed upon. They could not find much ground for co-operation and collaboration. In popular perception - and in the perception of many of their followers too - they remained opponents. Both indulged in verbal duels in order to expose the weaknesses of each other's thought and actions. This legacy could never be abandoned by the Ambedkarite political movement even after the 1950s. The disappearance of both personalities from the social scene, and a change in the political context have not altered the standardised positioning of the two as each other's enemies. Against this background it is proposed to enquire into the differences in the discourses of Gandhi and Ambedkar.

Two general points may be noted before we proceed to a discussion of the relationship between the Gandhian discourse and the Ambedkarian discourse. Movements for social transformation are based on emancipatory ideologies At the present juncture in the Indian society we find that movements for social transformation are weak and localised. Further, the dominant discourse today does not believe in the project of emancipation. In this context it becomes necessary to tap the possibilities of realignment of emancipatory ideologies. It would be inadvisable to be persuaded by the exclusivist claims of any ideology to the project of emancipation.

Secondly, personality clashes need not be the decisive factor in the assessment of thought. Also, we need to accept that immediate political interests of Gandhi and Ambedkar clashed. Ambedkar began his political career as leader of the untouchables and continued to claim to be the authentic representative of the untouchable community. Gandhi, on the other hand, appeared to be denying the existence of separate interests of untouchables in the context of the freedom struggle. Ambekdar was always suspicious of the social content of freedom struggle and believed that Gandhi was not adequately sensitive to this. Since Gandhi was at the helm of the freedom struggle, Ambedkar thought it necessary to position himself against Gandhi. Given these historical circumstances, is it necessary that we sit in judgment to decide the case in favour of either Gandhi or Ambedkar?

The present note proceeds with the assumption that Gandhi-Ambedkar clashes resulted from their personalities, as well as their respective positioning in the contemporary political contexts. However, beyond these clashes and differences of assessment of contemporary politics, there exists some ground where the agenda of Gandhi and Ambedkar might actually be complementary. To realise this, it is necessary to throw away the burden of proving whose political position was correct or incorrect.

The question of separate electorates for untouchables is a case in point. Was Gandhi wrong in opposing separate electorate for untouchables? Was he wrong in forcing Ambedkar into acquiescence through the fast? I would tend to argue that such questions are largely irrelevant given the fact that 'separate electorates' do not form the core of Ambedkar's thought. In other words, Gandhi-Ambedkar relationship needs to be probed in the context not of personalities of political strategies, but in terms of their respective emancipatory projects.

CASTE QUESTION

The centrality of the caste question in Ambedkar's thought cannot be overemphasised. He believed that untouchability was an expression of caste system. Therefore, Ambedkar chose to study the caste system and critically analyse the justification it received from Hindu scriptures His thought does not deal merely with removal of untouchability which was but one part of the anti-caste movement. He was also concerned with the overall annihilation of caste. Gandhi, of course, was in favour of abolition of castebased discriminations. In personal conduct too, he did not practise caste. But caste question does not occupy a place of urgency in his thought. He tended to emphasise untouchability more than the caste question. For Gandhi, untouchability formed the core of caste system. Once untouchability was removed, there will be no caste system. Gandhi was right in identifying untouchability as the most abhorring expression of caste-based inequality and attendant inhumanity. But the crucial question is, would caste disappear if untouchability is not practised? If so, why should there be internal differentiation and hierarchical separation among the touchable castes? Gandhi would argue that untouchability stands for everything ugly in the caste system and therefore, it must go instantly Extending this logic he could further claim that untouchability could be fully and finally removed only when caste-consciousness is removed. Removal of untouchability would thus symbolically bury the caste system. In the light of development of Gandhi's views on the caste issue, there is no doubt about Gandhi's ultimate preparedness to abolish caste. And yet, caste question does not become the core of Gandhi's discourse.

Consequently, Gandhi did not extend the scope of satyagraha to caste and caste-based inequality. Gandhi extended support to temple entry movements but did not allow such movements to occupy centre-stage in his movement. Similarly, Gandhi undertook fast to convince the Hindus of the sinfulness of practising untouchability and exhorted people to abolish the practice. But the philosophy of satyagraha does not adequately answer the question of tackling injustices perpetrated by one's own society and sanctioned by religion. Satyagraha as a political weapon is adequately demonstrated by Gandhi's thought and practice. But it satyagraha is to become a moral purifier what kind of a struggle is necessary against untouchability and caste? In the case of untouchability, Gandhi could argue that the responsibility of removing untouchability lies with the caste Hindus. Hence the reference to sin and penance. However, as Ambedkar put it squarely, untouchability exists as a stigma on the body of the untouchables. As the ones suffering from injustice, how should the untouchables fight against their plight in the Gandhian framework? Even if they were to offer satyagraha, how could this act prick the conscience of caste Hindus who were under the ideological spell of religious sanction to caste and who were getting material advantages from the caste-based order?

Apart from practising untouchability, the caste society presents a number of other possible sites of injustice where different caste groups may be located in antagonistic situations. Gandhi's discourse does not direct intellectual attention and political energies to the question of waging struggle against the caste system and more importantly against caste groups deriving advantages from the caste system. Instead, Gandhi tends to search possible areas of co-operation and integration of castes. Therefore, he refuses to recognise castedivisions even at the analytical level.

Gandhi's constant appeals to caste Hindus not to practise untouchability clearly indicate his awareness that one section of the society was being treated unjustly by another; it was relationship. In spite of this division of society at the empirical level, Gandhi refused to concede separate political identity to untouchables through separate electorates. He would allow 'reservation of seats' but the representational character of those elected through reserved seats would not be 'communal', i e, not as representatives of untouchables but as representatives of the general electorate. Gandhi's relative neglect of developing satyagraha against caste probably derived from this position of not recognising the political nature of social divisions.

Although he uses the term 'harijan' for untouchable 'brethren', Gandhi stoutly refused to recognise that caste-based divisions could actually be analytical categories for understanding the complex network of structures of injustice in the Hindu society. Ambedkar draws the distinction between untouchables and caste Hindus; he also suggests the possibility of using the categories of savarna and avarna where the latter would include untouchables and tribals, aborigines, etc. Before him, Phule visualised the categorisation in terms of 'dvij' status shudraatishudra and 'trivarniks'. The logic behind such categorisation is to locate the main contradiction in the caste-ridden society, either as varna or as 'dvij' status. While Gandhi would accept the empirical reality of caste, he was not prepared to posit in it the ideological basis of anti-caste struggle. Hence, his insistence on identifying the untouchables as part of the Hindu fold. The relative unimportance of caste question in the Gandhian discourse is prominently expressed in the writings of almost all Gandhian intellectuals who tend to virtually exclude the issue of caste from their expositions of Gandhism.

BANE OF CAPITALISM

The Gandhian discourse evolved through and along with his struggles against racism and colonialism. These struggles amply acquainted him with the evil side of western society. Yet, Gandhi was not trapped in formulating anti-west nationalism. He realised that the malady of the west lay in its peculiar production process. The modern process of production led to commodification and consequent degradation of human character. Therefore, Gandhi directed his attention to the modern lifestyle and the artificial generation of false materiality. The transformation of human beings into consumers from producers was the main step. in the degeneration of human society.

In this sense the Gandhian discourse can be squarely situated in the context of the problematique of capitalism. Although Gandhi rarely attacked capitalism directly, his analysis of modern civilisation unmistakably indicts capitalism. His assessment of the exploitative nature of modern process of production, dehumanising effects of consumerism and his overall assessment of the modern society do not make sense

uniess understood as analysis of the capitalist social order. Similarly, were not Gandhi demolishing the claims of capitalism, he would not have given so much prominence to the 'Daridranarayan'. His entire project hinges upon the juxtaposition between 'Daridranarayan' and the satanical nature of capitalist enterprise. Gandhi's advocacy of a simple life, insistence on abnegation of wants, and swadeshi must be seen as counterpoints to crass materiality and instrumental interdependence nurtured by capitalism. In this sense, Gandhi's swadeshi calls for redefinition of the scope of material development and an outright rejection of capitalism as the instrument of development. It must be borne in mind that Gandhi was not opposed to modern civilisation per se but as a social order based on capitalism.

Where does Ambedkar stand in relation to this Gandhian position, regarding capitalism and modern civilisation? Two points are striking in this context. Firstly, for the most part of his political career, Ambedkar did not employ his expertise in economics to his political agenda. Secondly, his early economic treatises do not substantially depart from the ideological position and standard wisdom prevalent in economics during his time.

It may be said that the main concern of Ambedkar was to understand sociologically the operation of caste system and to understand the socio-religious justifications of the same. His political struggles, too occurred on very different terrain from the economic. Thus, though he was aware of the economic aspects of caste system the chose to concentrate on the social, cultural, religious and political aspects of caste. Besides, Ambedkar's writings manifest a constant vacillation on his part as far as assessment of modern capitalist economy is concerned. For one thing, he was not persuaded by the soundness of communist economics. For another, Ambedkar was wary of any alternative that would tend to glorify or justify a semblance of the 'old order' in which caste occupied a-pivotal role. Thus, autonomous village communities, small industry, mutual dependence, etc, were not appreciated by him for fear of indirectly furthering caste interests. He might have looked upon forces of modernity as cutting at the root of caste society and therefore was not convinced of the 'evils' involved in modernity.

And yet it would be wrong to believe that Ambedkar upheld capitalism uncritically. Not only was he critical of many aspects of capitalist economy. Ambedkar was even prepared to reject it for a more egalitarian and democratic system of production. Ambedkar has noted the political fallout of capitalism, viz, sham democracy. He was not averse te a search for alternative economic system although he did not devote his energies to this project. Thus, Ambedkar would have no hesitation in either taking up economic issues to the centre-stage of popular struggles or in developing a critique of capitalism. But his emphasis on caste question gave an

impression that he had no sympathy for radical economic agenda. Unfortunately, this resulted in many of his followers literally seeing 'red' at the mention of economic issues! This has led to a false dichotomisation between caste question and economic question. Ambedkar's speeches and Marathi writings suggest that he did not subscribe to such dichotomisation. He was aware of the threat to liberty, equality and tratemity not only from brahminism but from capitalism also.

Perspectives on Tradition

It is interesting to see how Gandhi and Ambedkar negotiate with tradition. Gandhi engages in a creative dialogue with tradition. He tries to find out the element of truth in tradition and emphasises it. In many cases he attaches new meanings to traditional symbols. He gives an impression that he is asking for nothing new in substance, but for the continuation of the 'old' tradition. The secret of Gandhi's ability to arouse revolutionary potential among the masses lies partly in this method of not claiming anything revolutionary, and in the appeal to the conscience of the masses through tradition. For this purpose, he not only chose popular traditional symbols but those symbols which have been associated with truth and justice. Assuming the role of interpreter of our 'great tradition' Gandhi takes the liberty of developing his own normative framework on the basis of tradition.

Ambedkas, on the other hand, was in search of the ideology of exploitation. He felt that tradition was this ideology. Injustice hased on caste could not have continued unless it was legitimised by tradition. He also believed that the tradition of Hindu society was predominated by brahminical interests. As such, he could not ignore the role of tradition in situating caste as a moral code of Hindu speicty. This prompted Ambedkar to take a critical view of the entire Hindu (brahminical) tradition. It is also possible that Ambedkar realised the role of tradition in the contemporary context. All reform was stalled throughout the 19th century in the name of 'our great tradition' and its correctness. Thus, it was not tradition but forces upholding tradition that must have made Ambedkar a staunch critic of tradition. Yet did he really forsake tradition in its entirety? Much of Ambedkar's critical attack on tradition was either directed against glorification of brahminical tradition. It is possible to argue that Ambedkar was engaged in demolishing the tradition of brahminism and rejected the vedic ideological tradition. But he was not rejecting all traditions or else how could be search in that same tradition the path of the dhamma? Nor was he opposed to liberating traditions in the form of different sects. He was complaining against a lack of adequate emancipatory space within the traditional framework.

Tradition in an unequal society will always be caught between crossfire. Inequality will be cogently placed as part of tradition and tradition will be glorified as 'anadi', 'sanatan' and infallible. The same heritage will be sought to be condemned for all sins of the society. Gandhi, sensing the emotional power of tradition, appropriated it in order to save it from chauvinist glorifications. But even an appropriation of tradition requires a strong critique. Such critique is a constant reminder that tradition may have the potential of aligning with forces which perpetuate inequality. An all-round criticism of tradition further sensitises us to the fact that in many cases tradition actually gives credence to the system of exploitation. In other words, the supporters of inequality are always comfortable under the aegis of tradition. Thus, appropriation of tradition and employing it for purposes of building a just society requires a strong will to reject large parts of tradition and situating tradition in a different context from the one historically associated with it. In this sense, Ambedkar's critical assessment of tradition provides a useful counterpoint to the Gandhian attempt of appropriating tradition. And the Gandhian project too, does not presuppose an uncritical appropriation of all tradition.

MEETING GROUND

In a very general sense both Gandhi and Ambedkar strived to visualise a community based on justice and fraternity. The Gandhian discourse identities the elements of community in the form of love, non-violence, dignity of human life and dignity of physical labour and a non-exploitative process of production symbolised by rejection of greed. From the vantage point of this vision of the community, Gandhian discourse makes an assessment of colonial and capitalist reality. It develops a trenchant critique of modernity. The Ambedkarian discourse unfolds in a different manner. It commences from the critical evaluation of Indian social reality. Therefore, it concentrates on Hindu social order, its religious ideology and Hindu tradition. Thus, Ambedkar's discourse takes the form of critique of Hindu religion and society. Ambedkar was constantly aware of the need to situate this critique on a solid basis of communitarian vision. Although liberty, equality and fraternity beckoned him constantly, Ambedkar transcends liberalism and socialism to finally arrive at the conception of the dhamma.

The difference in the structures of their discourses notwithstanding, Gandhi and Ambedkar thus came to share similar visions. Both believed that social transformation could come about only by social action. Therefore, they relied heavily on mobilising people against injustice. Social action perceived by Gandhi and Ambedkar was democratic; it was in the form of popular struggles. Gandhi many times appeared to be favouring compromises and avoiding 'conflict'. Ambedkar, too, is seen by many (even his followers) as a supporter of non-agitational politics. But the core of their politics as well as their position on social action leave us in no doubt that Gandhi and Ambedkar not only pursued popular struggles but they valued struggles as essential and enriching. They did not visualise removal of injustice without struggles and without popular participation. Further, Gandhi and Ambedkar would have no difficulty in agreeing upon the value of non-violence.

The discourses of Gandhi and Ambedkar respect the materiality of human life. Fulfilment of material needs, and a stable and enriched material life are seen by both as forming the basis of human activity. Therefore, they would not deny the legitimacy of the goal of providing material basis to society. Moreover, Gandhi and Ambedkar have a striking similarity in their views on morality. They believe moral values to be eternal and necessary for co-ordinating material social life.

At the root of this similarity is the common conception of secular religion. This conception rejected all rituals, bypassed the question of existence of god and other world, and brought morality to the centre-stage of discussion of religion. It is not a mere coincidence that both Gandhi and Ambedkar should be treated as heretic by religious orthodoxies of Hinduism and Buddhism, respectively. Both claim that religion and scriptures need to be understood in the light of conscience and morality. Wherever scriptures contradict conscience, religion demands that conscience should be followed. In this sense they were sceptical not only about scriptures, but 'priestly authorities' deciding the meaning of scriptures. This view cut at the root of any notion of an organised, closed religion. Gandhi and Ambedkar shift religion from the realm of metaphysics and situate it onto the terrain of secular matters such as truth, compassion, love, conscience, social responsibility and enlightened sense of morality. Understood thus, Gandhi's sanatan dharma and Ambedkar's dhamma do not confine to individual and private pursuits of good life but operate as the moral framework for social action. Religion becomes secular and part of the 'public' sphere. When the so-called religious people were busy counting numbers, Gandhi and Ambedkar tried to turn religiosity of common man into a force for social transformation.

Struggle for truth and non-violence has to incorporate caste struggle because caste is a structure of violence and injustice. Just as Gandhi denounces the satanic culture of the west, Gandhism can be a denunciation of caste-based injustice. Gandhi does not forbid the use of soul-force against the satanic tendencies in one's own society. If contemporary Gandhism tights shy of caste struggles, it has lest the core of Gandhi's discourse. The restrictive interpretation of Gandhi will have to be rejected in favour of a creative interpretation. Non-recognition of categories like shudra-atishudra does not form the core of Gandhism. In fact, use of a term like 'daridranarayan' presupposes readiness to understand social reality on the basis of exploitative relations. Therefore, political

mapping of social forces on caste basis can be incorporated into Gandhian discourse. Gandhi's strong rejection of religious authority behind untouchability, his later views on intercaste marriage, his nonorthodox interpretation on varna in early years and loss of interest in varna in later years, and the constant exhortation to become 'shudra', - to engage in physical labour all point to the possibility that caste question can form legitimate concern of the Gandhian discourse. It should be of some interest that Gandhi does not culogise the 'trivarniks' or their roles while constantly upholding dignity of labour. His sanatan dharma is characteristically uninfluenced by brahminism.

Similarly, Ambedkar's position on capitalism and modernity can be extended and reinterpreted. He located the primary source of exploitation in the caste system in the Indian context. But he never disputed the exploitative character of capitalism. His espousal of socialism (e.g., Independent Labour Party) and state socialism apart, he tended to take the view that concentration of wealth and exploitation gave rise to 'dukkha'. His conception of dhamma makes it clear that Ambedkar made a distinction between material well-being and insatiable lust. This is the ground on which critique of modernist life can be figured within his discourse. It is true that Ambedkar's rejection of tradition and traditional life-style appears to be modernistic. But it must be conceded that Ambedkar had to take into consideration immediate interests of untouchables. Thus, his plea to move to cities need not be understood as a modernist project. Also, Gandhi's espousal of village life should not be seen as justification of existing village life. Grounding Ambedkar's interpretation in his conception of dhamma can open up the possibility of bridging the distance between Gandhi and Ambedkar.

The discourses of Gandhi and Ambedkar were not antithetical. Therefore, it is possible to think in terms of common concerns and potential grounds for dialogue between the two discourses. Further, both Gandhi and Ambedkar were concerned with the question of emancipation. As such, a broadening of the scope of their discourses is all the more essential. As mentioned earlier, at the present moment, legitimacy of emancipatory project is being challenged. The dominant discourse today tends to underplay the caste question and legitimises capitalism. In contrast the movements of social transformation appear to be fragmented or stagnant. The theoretical strength required to meet this challenge can be gained partly by building bridges between the two rich discourses of our times.

[A paper presented at the seminar on 'Gandhi's Relevance to Contemporary Theory and Politics' organised by the Department of Politics and Public Administration. University of Pune; October 9-10, 1995. I have drawn liberally from my Marathi article on this theme published in Samaj Prabndhan Patrika, January-March, 1995.]

Walking on One Leg India's Software Industry.

R Narasimhan

India's Software Industry: State Policy, Liberalisation and Industrial Development by Richard Heeks; Sage Publications, New Delhi, 1996; Rs 450.

THE high-visibility success of the Indian software industry surprises and puzzles outsiders. There are several reasons for this. Two of the more important ones are these: Software is a glamour industry. Designing and producing software is an example, par excellence, of a highly professional, hi-tech, cutting-edge activity. India's success in this sector is difficult to reconcile with the country's overall poverty-ridden, developing country image. Secondly, India's software industry is predominantly export-oriented and its major export market is the US, the acknowledged world-leader in all aspects of information technology, especially in software technology.

Predictably, in the recent past, a variety of studies (policy-oriented, technology-oriented, business-oriented) have been initiated by academic groups in the west to understand the reasons behind the sustained exceptional performance of the Indian software industry. The book by Richard Heeks on India's software industry is the result of undoubtedly the most substantive such study. According to the author, the main funding for the study came from UK's Science and Engineering Research Council (SERC) and Economic and Social Research Council (ESRC).

The information collected to support Heeks' study is astonishing in its variety and coverage. Following an initial field survey in India in 1988, four further periods of fieldwork were undertaken by the author and co-workers in 1989, 1991, 1992, and 1994. During this time, over 250 semi-structured interviews were conducted with roughly 150 persons in over 100 organisations. In addition, managers of six leading hardware firms, five leading public sector users of local and imported hardware and software, 30 government officials from a variety of government departments and agencies, persons responsible for software in the three leading industry associations, nine academics, and editors of four leading Indian computer journals, were interviewed. A whole variety of secondary material was compiled from libraries, bookshops, government agencies, newspaper offices, and so on. A set of short-term studies on software industry development in China, Cuba, Kenya, Malaysia and Singapore was also carried out between 1989 and 1994 (p 371). I am personally not aware of any study, either from within India or outside, that can

match Heeks' in its data coverage in depth and width.

Some of the questions for which Heeks seeks answers in his study are the following: (1) On the vexing issue of state versus market. it is generally taken for granted that the performance of the Indian software industry argues tellingly in favour of a free-market and against state intervention. To what extent is this true? (2) Through import liberalisation and export incentives, the Indian government has been single-mindedly pushing for software exports. What have been the shortterm gains to the country, if any? What are the long-term dangers one should be aware of in continuing with such an exclusively export-oriented policy? (3) What have been the spin-offs, if any, from the software industry to the other Indian industries, and the other facets of the Indian economy?

I shall discuss in this review Heeks' answers to some of these questions based on his study. The software industry cannot be studied in complete isolation from the hardware industry. Right from the early years of the information revolution, India has made a determined effort to build up a viable base for manufacturing computer hardware. Indian government's liberalisation policies, and its over-enthusiastic support for software export have, more often than not, resulted in adverse fall-outs to India's hardware industry. Heeks' study includes a detailed analysis of these fall-outs. I shall not deal with this aspect of Heeks' study in this review. His recent article in EPW [Heeks 1995] covers this ground in some detail. This should be consulted by those interested in issues in this domain.

INDIAN SOFTWARE INDUSTRY AND GLOBALISATION

The data available in India concerning overall software production, consumption, trade within the country, and even export are notoriously incomplete and often unreliable. Available figures take little account of inhouse domestic software production, of software sales that are bundled with hardware, of software piracy, and of the lower value of domestic software products and contracts compared to exports (p 72). This feature must be constantly kept in mind when trying to make fine quantitative inferences.

It is clear, however, that mainstream software industry has deliberately neglected the domestic market in favour of exports. Out of the top 25 software producers in

" white-term is at the second

1994-95, 15 earned less than 20 per cent of their software revenue from the domestic market, of which the major part came from trade in imported packages. "Only five firms earned more than half their revenue from the domestic market, but apart from the public sector CMC and ECIL, well over 90 per cent of that domestic income came from the trading of imported software packages. Roughly onethird of India's software export carnings came from firms which had no domestic market base for software services and sales" (p72). This picture is very much corroborated by the summary of software industry performance for 1995-96 recently published by NASSCOM, the apex industry association in the software domain in India.

"Software exports grew from under 10 per cent of total electronics export in 1980...to 40 per cent from 1991-92 to 1994-95. Software export also rose from just 0.05 per cent of all Indian exports in 1980 to just over 1.8 per cent in 1994-95" (p 75). Heeks points out that the Indian software industry's growth rates, although seemingly high in the Indian context, may be seen in world perspective by noting that Indian software exports formed less than 0.15 per cent of the total world computer service and software market in 1994-95.

It is convenient and tempting to focus publicity on gross earnings through software export than net earnings taking into account expenses incurred in foreign exchange to pay for travel, living allowances, marketing and so on. Additionally, expenses are incurred in import of software tools and hardware for software production. Heeks conjectures that India probably has a negative balance of trade in software after 1986. All those interviewed after this date, including those in the government who expressed an opinion, felt that India was a net software importer. The figures for 1987 suggest that there was a net outflow from India of something over US \$ 100 mn in software (pp 77-78). This trade gap is very likely being narrowed and even reversed during the 1990s.

That a trade gap should develop and persist in the software sector is in itself not an adverse reflection on the performance of the Indian software industry. Information technology in general, and software in particular, are infrastructural resources. Information technology (IT) is a means to an end and not an end in itself. IT's large multiplier effect comes about when it is used to improve the performance of the other industrial and service sectors of the economy. It is precisely for this reason that the deliberate neglect of the domestic market should be considered a grave failure on the part of both the government and the intended in industries.

Software and service exports could be categorised into one of four kinds. (1) sale of software packages; (2) data entry and

digitisation: (3) customised conversion works and (4) customised application building. India's export profile during the 1990s is made up of 2-5 per cent of the first two, and close to 95 percent of the last two. Customised services (3 and 4 in the above list) can be provided by loaning people to work in the customers' sites (on site work, also referred to as 'body shopping', which is really a misleading characterisation since what are shopped are not bodies but brains and skills) or by doing the bulk of the implementation work offshore, i.e., in India. It is generally conceded by all - including the Indian software industry - that providing services on site forms still an undesirably large part of our export.

Heeks concludes rather pessimistically: "Indian workers have far more often been used as programmers, rather than as system analysts or designers, working to requirements and design specifications set by foreign software developers... Such a division is also seen when packages are developed by Indian firms for the export market" (pp 82-83). Fortunately, this conclusion would seem to apply decreasingly to the larger Indian software companies, although it continues to be true of smaller groups and fresh starters.

Another disturbing factor is that the interaction with the external partners is also very narrowly circumscribed. "Figures collected from the top 25 exporters of 1989-90 to 1994-95 indicate that all but seven of these undertook the majority of their software exports for a single foreign company with which they were collaborating" (pp 83-84). This dependence on one foreign company was even greater during the formative years of most exporting firms.

"Software cannot be described as a significant employer in general terms. Employment in the mid-1990s represents about 8 per cent of the total electronics industry employment (up from about 1 per cent in the early 1980s), and just over 0.5 per cent of total manufacturing employment in India. It has employed a few thousand people, against which one may compare India's total of around 3 million registered unemployed graduates in the 1990s" (pp 93-94).

Another notable factor is the heavy turnover of skilled employees in software companies. On an average the turnover rate is 15-20 per cent; in some companies the rate is as high as 50 per cent in one year. 10-15 per cent of the staff from the industry leave permanently or semi-permanently by opting to go to work or study overseas. Staff leave particularly when on site because of constant 'head-hunting' by overseas software agencies (several of them run by NRIs) and because of a sense of exploitation.

Staff turnover, in itself, is not a loss to the economy, although it is undoubtedly a serious destabilising factor to the companies affected. So long as staff movement is contained within the country, it is a positive means of technology and skill diffusion in the economy.

However, when 'brains' are lost due to permanent or long-term emigration, the loss to the economy is not easy to compensate. As Heeks notes, "the lack of experienced project managers, analysts, and designers has made it difficult for Indian companies to accept turnkey contracts" (p 97). Another consequence that Heeks does not emphasise is that the shortage of skilled and experienced staff is resulting in artificial inflation of software staff valaries, especially salaries at the entry and middle levels. This is making it difficult for smaller firms to survive, and is beginning to affect adversely the performance of even medium-to-large firms.

How does the productivity of Indian software workers compare with productivity levels reached in the west? Measuring productivity in terms of the lines of software code produced per person-day, "when working overseas, Indian software developers achieve productivity levels as high as those of their western counterparts and sometimes higher by 20-25 per cent... Within India the productivity level varies widely between companies but, on the average, it may be somewhat less than that achieved in the west" (p 100).

'Out-sourcing by highly industrialised countries has been the principal factor driving the growth of software exports from India. "Something like US \$ 40 bn of IT work was out-sourced by US-based organisations in 1995" (p 110). Among developing countries, India has so far enjoyed a decided advantage because of its high quality software professional skills available at relatively low costs, coupled with its facility in using the English language. However, as one of the leading actors in the Indian software industry once observed, these advantages are unlikely to last once the Chinese begin to catch up with us in their facility to use English!

More serious consequences of India's continued dependence on out-sourcing as a major export opportunity are pointed out by Heeks. Innovative and strategic applications are unlikely to be out-sourced. Recession may slow down growth in out-sourcing. Too much global out-sourcing may lead to protectionist reactions in developed countries. One can already begin to see the signs of these consequences on the horizon. In addition. Heeks cautions that Indian export opportunities could be squeezed "if co-operative export initiatives expand such as that between Singapore and China which aims to address the Japanese market by combining Singapore's management expertise, ease of business, and good infrastructure, with China's low labour costs" (p 114).

Heeks devotes two chapters to deal with the pros and cons of collaboration with MNCs and the government interventions needed to ensure the ready availability of working capital, sufficient supply of skilled professionals, viable telecommunications infrastructure, promotion of R and D and marketing. For the most part his analysis of the need

٠.

for intervention and also of the nature of the interventions called for add nothing new to what the Department of Electronics and the software industry here have been aware of and have been trying to grapple with.

As regards foreign collaboration, Hecks recognises that "collaborations have been encouraged in order to try to overcome some of the skill, capital, technology, and marketing constraints that have beset the software industry. Many collaborations have helped to supply these inputs and they have formed a vital part of India's software export growth. However, they have been of relatively little benefit to domestic-oriented needs; have been associated with export vulnerability and technological dependence; and their growth increasingly constrains the policy options available to the Indian government" (p 236). Heeks nevertheless feels that many of these constraints could be met through imaginative and effective government interventions.

One of the most valuable and significant contributions to the study of Indian software industry that Heeks' book makes is contained in the Appendix where Heeks lists exhaustively all the foreign collaborations relating to information technology known to have been active in India up to mid-1995. These may be grouped as follows with an indication of the number of collaborations in each category:

Computer collaborations (101), Specialist computer collaborations (24), Peripherals and related collaborations (124), Software distribution agreements (181), Software export collaborations (132), Training collaborations (15)

These comprehensive listings make clear – as no mere textual discussion can – to what extent our information technology industry (which, of course, includes the software industry) is riding piggyback on foreign collaborators and is, therefore, in a strate, gically vulnerable position.

SOFTWARE INDUSTRY AND THE DOMESTIC MARKET

Why did Indian software companies choose to set up export operations—either exclusively or as their primary business—neglecting to cultivate the domestic market, and what was the influence of government policy in such decisions?

The contrast between the domestic market and the export market was a major factor in moving firms into export-oriented work. The perception was that exports offered a huge market and possibilities of quick returns and high earnings. Other influencing factors were: up-to-date technology awareness and skills; staff motivation and good company image and track record. The new entrants invariably chose on site service exports rather than offshore work or export of software packages because of fow risk, low barriers to entry, low investment, and quick returns (p 131).

The negative aspects characterising the domestic market provided additional argu-

here. The majority of customers in the domestic market were either government departments or quasi-government agencies. Among them the culture of a willingness to pay for software and services was poorly developed. "The ratio of software to hardware spending in India in 1994-95 was still only 1:3 – a long way below the global market" (p 136).

Also "the revenue per worker in the domestic market is at least two to three times lower than that for exports and profits are similarly lower—the opposite to the situation in most Indian industries. Loss-making firms earned an average of over 80 per cent of their turnover from the domestic market, while the profit-making ones earned an average of over 60 per cent of their turnover from exports" (p 131).

Coupled to these positive and negative aspects of the external and domestic markets, respectively, government policies – either intentionally or otherwise – all seemed to be formulated to promote export operations and penalise cultivating the domestic market.

"One specific set of policies aimed directly to promote software exports has been export incentives" (p 139). Export profits have been wholly tax-exempt since 1990 for software exports. Of course, this has been the case for all manufactured exports and also some services. Because of the way in which the tax-exemption formula is calculated, it is claimed that it provides a strong disincentive for software companies to address the home market.

The steep devaluation of the Indian rupee (from Rs 7.75/US\$ in 1980 to around Rs 35/US\$ in 1996) by over 350 per cent, in combination with import liberalisation and rising import-intensity of production, has resulted in rising import costs, rising production costs, and higher debt-servicing charges. Heeks comments: "Devaluation is too much of a blunt instrument and needs to be replaced by a more selective approach" (p 141).

Another set of export incentives centres on Export Processing Zones (EPZs), Export-Oriented Units (EOUs), and Software Technology Parks (STPs). Some of the benefits differentially available to businesses operating from these privileged areas, as opposed to those from Domestic Tariff Areas (DTAs) are: fast duty-free imports and exports; a quick 'single-window' for all bureaucratic dealings; exemptions and subsidies on sales and excise tax, rent, power, water; a five-year tax holiday; greater access to foreign exchange and infrastructural facilities (than those available to domestic units); and permission for wholly-owned foreign firms which can freely repatriate profits.

Heeks is rather critical of the performance of STPs claiming that "the majority of [business] units approved are yet to be set up or are exporters in name only; and most of the STP exports — which were intended

come from body shopping" (p 143).

Neglect of the domestic market, however, is bound to lead to serious consequences in the long-term, if not in the short-term. Several of the major actors in the software industry are fully aware of this. One of them is quoted as having pointed out that "there has been an overemphasis on exports rather than on building an industry which could meet both internal demands as well as export requirements" (p 150).

For companies trying to break into the export market and for those still new to exports, credibility and track record must come mainly from their achievements in the domestic market. Foreign clients prefer to work with companies with a domestic base (p 146). Domestic work is also used by many software export companies as a training ground for their new recruits. Domestic market could also act as an export buffer.

In addition to all the above reasons, one essential and fundamental reason for nurturing a domestic market for information technology and software is the critical infrastructural role played by these technologies, as pointed out earlier. As Heeks emphasises: "...domestic-orientation for software brings greater returns to the national economy, even in terms of foreign exchange, than exports. Net carnings from exports are relatively low and much of the software produced assists foreign competitors who can then, among other things, export more efficiently to India. Software for domestic consumption, on the other hand, can improve the competitiveness of Indian firms who can then, among other things, export more efficiently from India" (p 157).

WALKING ON TWO LEGS

What are the lessons to learn from the above detailed analysis of the history of the growth and performance of the software industry in India during the last decade and a half?

First, Heeks emphasises the futility of endlessly arguing about the relative merits of structuralist versus neo-liberal models. The market does not know best; nor does the state. The state, however, has the ultimate responsibility to imaginatively monitor the performance of the market, and take promotional and/or corrective actions wherever and whenever needed.

In the Indian case, as discussed earlier, either intentionally or through neglect, a dangerous imbalance has been allowed to develop between the export market and the domestic one. It would be counter-productive at this stage to introduce measures to cut down exports. Rather, one should take all the steps needed to build-up the internal market. "...the overriding recommendation for Indian software policy to emerge from this study is that the industry be developed in future to 'walk on two legs' (a phrase

carner used in this context by Schware (1992); that is, by striving for greater balance and integration between production for exports and for the domestic market" (p. 363).

Heeks maintains that "this will be achieved through government intervention and not through liberalisation. It will also be achieved by ensuring that domestic market production is not disadvantaged at the expense of exportoriented biases" (p 363). Some of the intervention possibilities that Heeks cites are the tollowing: (1) expansion of the domestic market through government procurement; (2) firm action on piracy; (3) encouragement of local R and D; (4) substitution for other multinational inputs; and (5) some form of continued protection for local software packages and service.

He further argues that the domestic custom software market does need to be protected because of its importance as a source for building local technological capabilities. Imported software services should, therefore, not be encouraged (p 364). He also feels that an expansion in the numbers of wholly foreign-owned and wholly export-oriented software companies should not be encouraged. He is also in favour of the government facilitating investment by Indian software companies in foreign consultancy and marketing firms.

Other measures suggested by Heeks are not novel and have been knocked around a lot, inconclusively, in discussions in various for a in India. For example: (1) encouraging small-scale entrepreneurial groups by providing them, at low cost, technology, consultancy, marketing, and skilled professional inputs; (2) providing support for software application development in noncommercial areas: for example, to support basic-needs programmes: (3) improving training facilities outside metropolitan areas; and (4) improving linkages between academia and industry. The list can be made very long. The critical point to ponder is why such obvious intervention measures have not taken off. And why, where they do take off, they are condemned to an early death.

Globalisation and liberalisation have become trendy, vogue words. One reason for this is that the concepts behind these words are conveniently fuzzy for interested parties to manipulate them in self-serving ways. Given this background, Heeks study of the Indian software industry is valuable and timely, not the least because of its convincing analysis of the dangers of walking on one leg.

Muslim Society in South Asia

Nasreen Fazalbhoy

Muslim Communities of South Asia: Culture, Society and Power edited by T N Madan; Manohar, New Delhi, 1995.

THE book under review is a revised and expanded version of articles published in Contributions to Indian Sociology in 1972. The articles have been written at different times, and with different concerns and perspetives, but the editor has identified three broad themes as emerging in the collection: attributes of cultural identity, modes of social organisation and dimensions of power. These themes are distributed throughout the book which is organised by country. Pakistan (three articles), Bangladesh (two), Nepal (one), India (six) and Sri Lanka (two).

For a long time studies on Muslim societies tended to assume a correspondence between religion and culture, as if everything in a Muslim society ought to approximate the model of society set out by Islamic texts. Not only did this result in the kind of Orientalism pointed to by Edward Said where religion was considered the main source of all social attitudes and institutions, but even sociological studies tended to look at the divergence between theory and practice as the major problematic in Muslim society. During the last 20 years or so, with more access and exposure to Muslim societies and the emergence of more localised and contextualised studies of Muslims, the issues and concerns have broadened considerably. The present volume too is an effort to put together and expand the available material on Muslims in south Asia, a much neglected area of study in the sociological study of the Islamic world.

One great advantage of this collection of papers is that they are all based on field work, so that they give some texture to the theoretical issues concerning Muslim societies. How do Muslims and Hindus mutually categorise each other? If Islam has an egalitarian ideology, how do Muslim societies handle hierarchy? In south Asia, a society where a caste mentality dominates. have Muslims resisted the cultural milieu or have they incorporated it? Social organisation among Muslims in south Asia for instance has been little investigated except for the question of caste. In this collection the articles throw light on 'biraderis' (lineages, clans), tribes and brotherhoods, in addition to caste. Though definitions on what is caste differ between the different authors, the articles throw light on different dimensions of the problem.

Gaboricau and Madan take as their problematic the ascription of the 'other' in Nepal and Kashmir, respectively. In the Hindu-dominated society of Nepal, Muslims are ranked differently by the pure and impure castes, and seem to share and participate in such ranking. In Kashmir where Muslims are in a majority, two social and ideological

orders coexisted (at least till the last two decades), which actually excluded one another, but also mutually reinforced one another. Pnina Werbner finds that caste practices continue among Punjabi Pakistani Muslims even atter they migrate to the United Kingdom and that in fact relations of power and economic dominance are articulated in the idiom of caste and ratified through marriage alliance. 'Islamisation' also becomes constitutive of the existing caste hierarchies. Lindholm's article summarises the issues and also makes the novel suggestion that caste practices among Muslims in India need not be seen as a diffusion from Hindu societies, but could be a diffusion from Muslim societies of West Asia which also practice commensality. In Bangladesh Bertocci finds ranking is not so dependent on caste, as does Mauroof in Sri Lanka.

The articles by Alavi and Rao on the biraderi system in Punjab and Kashmir, respectively, are especially rewarding for their theoretical comments and excellent field work. Alavi takes issue with Levi Strauss on the question of patrilateral parallel cousin marriage, which is characteristic of Muslim societies, but considered by Levi Strauss not to be a viable system of kinship at all. More stimulating is the detailed discussion of the sliding semantic structure of birarten, as clan and lineage, and the structural role of giftgiving in maintaining the biraderi. Rao takes up problems of the translation of local terms relating to the organisation of community and domestic group, and how the changes in these terms reflect socio-economic transformation in the area. There is a fascinating discussion of boundaries, their context specificity, and the variation of meanings taking into account the time dimension. The theoretical issues raised by these two articles go beyond the specifics of Muslim societies In fact religion barely enters into the accounts, reflecting probably the field situation where people do not turn to religion to legitimise these aspects of their lives.

Madan's discussion on the social construction of cultural identities is as always, impeccably presented. He systematically discusses the social construction of identities by looking at self-perceptions of each community (Hindus and Muslims) the perceptions they have of the other community, the ideological positions of each, and the empirical situation that they face. From his account we see the dual social organisation that existed in Kashmir, in which Hindus and Muslims actually excluded one another ideologically, but empirically had worked out a compromise, in which both could be accommodated within an

everarching framework, defined partly in caltural terms and partly in terms of the politico-economic setup, which was not Hindu or Muslim, but Kashmiri. However, the underlying and unresolved tension arising from such ideological exclusions is indicated perhaps in the fact that this society has fractured so competely in the past two decades.

In this collection of articles the definition of power is not restricted to secular power. but includes also the spiritual authority of the mullah and the 'pir', two typical institutions found in Muslim societies. We have here a descriptive account of Ahmad Riza Khan by Usha Sanyal, a Sufi pir and a 'mufti'(jurisconsult), which shows the multiple roles associated with religious leadership and the charismatic sources of legitimacy. A more contemporary account by Katy Gardner of the pirs in Sylhet who are now getting transformed into traditional scholars under the pressure of Islamisation shows us the effects of Islamisation 'on the ground' so to speak. Akbar Ahmed's lively account of the strategies used by a mullah who sought to expand his authority from the religious sphere into the secular political sphere in the tribal area of Waziristan is perhaps indicative of similar movements elsewhere in the contemporary Muslim world.

A number of additional and valuable aspects of contemporary Muslim society in south Asia are documented in the different articles. I found especially useful the discussions in various articles pertaining to the connection between Islamisation and status, and the lexical analyses of terms such as 'zat', or biraderi, which show the impact of time, space, ideology on the connotations of these terms.

Notwithstanding the wealth of material in this book there are a few problems that are unavoidable in a collection of articles of this kind. Since the articles in the book have been written at different times, and with different concerns there is inevitably a lack of continuity and development of themes. The issues of power, identity, and cultural organisation are not specifically developed, and the fact that the articles are organised according to geographical area also does not help to identify each theme in terms of its dynamics, or in terms of the tensions that exist in Muslim societies on these issues. Each article takes up its own theoretical perspective and addresses a different issue. Terms like 'caste', 'purism', 'Islamisation' for instance are defined differently by different authors. Some articles are dated in terms of approach and issues addressed and would have contributed more if a comparative perspective had been introduced, particularly in the light of recent political events in India. However, these are minor points. The collection provides invaluable insights and information, and gives a feel for the variety, the differences and the continuities in south Asian Muslim societies. It should be required reading for anyone interested in the area.

Educating the National Imagination

Shalini Advani

This essay seeks to examine the construction of nation by our educational system as reflected in the intentions and visions of policy-makers and in the nature and structure of ideas embedded in textbooks. By analysing the various contradictory and complementary discourses that inhabit the curriculum, the essay notes the process of essentialisation, mythificultion and romanticisation of Indian history, society and economy which denies interrogation by alternative paradigms of development and social justice

1

of the Atlantic Ocean

II is a truism today that the structuring of knowledge is an exercise which is intimately linked to the structuring of power In a colonised nation, this is played out on the political and economic terrrain of the coloniser, but post-colonial nations seek to redefine and reinvent themselves via alternative definitions of what is worth knowing In India the project of nation building has lain at the heart of educational policy since 1947. It has been however an uneasy and contestatory process Between the conflicting claims of the English speaking intelligentsia and the proponents of Hindi, the secularists and the revisionist BJP governments of Madhya Pradesh and Uttar Pradesh, the urban middle class and the newly powerful rural elite, education has been the site of multiple definitions of the nation as various claimants to power have attempted to lay their imprint upon it

What is the nature of the nation which emerges and who defines it? The question of defining the nation is more complex than is at first evident. For the nation, like any idea, is imagined into existence in different ways for different reasons at different times, it is not an objective entity which transcends time nor is it fixed in its nature.

The most powerful single element emerges because of the bureaucratic structure of post-colonial India. This has meant that at least overtly, the definition of the nation is overwhelmingly dictated by the imperatives of state policy. A number of recent studies

have highlighted the hegemonic nature of state controlled education though they have tended to define the state as essentially middle class and as overwhelmingly powerful. As we shall see however, what has emerged today is an elite and pervasive agenda but also one which is constituted of rival definitions which are only partially shaped by state policy. The multi-sided struggle among various status communities for domination for economic advantage and for prestige is played out on the terrain of education.

There are two distinct if connected ways in which the education system seeks to construct the nation. One is through a conceptual definition and the constitution of a national cultural imagery which locates the nation in the realm of loyalty emotion and myth. The second is through a description of the nation in motion, its activity, social ordering and progress defining its parameters.

In this essay, I examine this process by considering first the intentions and visions of policy makers and second, the nature and structure of ideas embedded in government textbooks. I therefore look at various education reports commissioned since 1947 and the state produced English textbooks of UP Kerala and the all India NCERT While some study has been done of the history textbooks in use in schools, little attention has been paid to the language books. Yet precisely because the exact content of language books is less rigidly defined, it is possible to examine the assumptions and ideology which underlie the system of edu cation at large. Through the stones and poems found in language textbooks it is possible to glean a discourse which is altogether less obvious and therefore more powerful than that found in the social science books

I

To explore the articulations of state policy on education as well as its implementation in textbooks is to uncover a variety of discourses. On the one hand, there is the in evitable emphasis on defining and celebrating the nation, on the other, the silences and assertions reveal a profound unease with potential challenges to this over arching

definition, an attempt to negotiate the conflicts

This is evident in nearly every education report commissioned since 1947. Overwhelmingly education is seen as the holy grail the crucial element in shaping national culture. As early as 1952, this is spelt out in the Mudaliar commission report on secondary education.

The aim of secondary education is to train the youth of the country to be good citizens who will be competent to play their part effectively in the social reconstruction and economic development of their country ⁴

It is interesting to note that the notion of the nation in this report as well as elsewhere within the system is that of a single and undifferentiated entity. The Mudaliar commission report sets the tone for the next four decades at sees the nation as a monolithic and unitary whole and is reluctant to conceive of an entity which is made up of fragmentary and diverse elements. In fact, the conflicting and contesting identities which inevitably exist are generally seen as divisive and dangerous.

There has been an accentuation in recent years of certain undesirable tendencies of provincialism regionalism and other sectional differences. This situation is friught with serious consequences and it is as much the duty of statesmen as educationalists to take steps to re-orient people's mind in the right direction. If education fails to play its part effectively in checking these tendencies if it does not strengthen the forces of national cohesion and solidarity we are afrain that our freedom our national unity as well as our future progress will be seriously imperified

It is worth quoting this in some detail because it strikes a note which resounds till the present day. The inxiety for a strongly centralised identity is comprehensible in a newly fledged nation, five years after the partition. It is however echoed with equal vehemence, over three decades later in the 1986. National Policy for Education (the New Education Policy as it is popularly termed) suggesting that years later the anxiety to define a coherent and unified nation remains equally compelling. While stressing the need for education to teach the values of secularism and tolerance, the policy

recommends a pational system of education with a core curriculum including the history of India's freedom movement, constitutional obligations and 'other content essential to nurture national identity'. It hopes that

these elements [of the core curriculum] will cut across subject areas and will be designed to promote values such as India's common cultural heritage, egalitarianism, democracy and secularism, equality of the sexes, protection of the environment, removal of social barriers, observance of the small family norm and inculcation of the scientific temper.7

There is a great deal here which is important for any society, and yet it is an odd list. As aspects of a common core curriculum, cultural nationalism (an emphasis on a common Indian heritage) nestles up to universal liberal values such as egalitarianism and democracy, which in turn is on par with specifically state policy such as family planning. More to the point, there is a clear conception of a flat national identity which it is possible to develop through a specific national culture which can be taught.

The nationally integrative aim of education is faithfully transmitted from policy to implementation. In 1984 the NCERT embarked on an exercise to put together a national curricular framework. The document entitled, National Curriculum for Elementary and Secondary Education: A Framework, was the result of the deliberations of an NCERT steering group, one national and four regional seminars. The final policy that emerged gave enormous weight to the role of education in the 'strengthening of national identity and unity'. It states:

At this point of our history, the most urgent need is to consciously develop national spirit and national identity. Education, as an instrument of social transformation, should ensure that its beneficiaries and products demonstrate a national consciousness, a national spirit and national identity which are considered essential for national unity."

Apart from the tautology ('national' and its variants occur six times in two sentences), the document is significant because it provides a framework for the curriculum as it is implemented on the ground, going beyond a broad definition of general policy. Its aims are consistently visible in the construction of textbooks, as is apparent from the rationale for the readings included in a UP board English reader. First published in 1976, the book precedes the NCERT document, but its intentions are identical. The introduction spells out:

While selecting and adapting the themes, effort has been made to provide good reading material, so that the students imperceptibly imbibe higher human values such as devotion to duty, service before self, fidelity, a love of adventure and patriotism and thus help them to become ideal citizens of the motherland."

Ш

Let us move now, to the textbooks themselves, to what is actually read and learnt within the classroom. It is important to see how exactly this sense of being a citizen is conceived of, who it empowers, who it silences and what use it makes of its myth and history. An examination of textbooks produced by the all-India textbook-writing body (the NCERT) and those of the different state bureaus (the SCERTs) produces surprisingly uniform answers to a large number of these questions. Three different groups of hooks - these produced by the UP board, the Kerala beast and the all-India NCERT - suggest that cortain themes recur in the definition and fleshing out of what India is, and what it means to be a citizen

UNITY IN DIVERSITY

One of the strongest markers of postcolonial Indian identity is an apparently overt recognition of its cultural diversity and regional variance; the theme, however, is simultaneously emphasised and uneasily subverted. In emphasising this diversity, there is a clear attempt to outline the uniqueness which this bestows on India and to teach students the value of this. For all their emphasis on national unity, every education report since Independence also contains a section on opening up the minds of students to the variety and richness of India's cultural heritage: the English textbooks produced by Kerala's state board of education (SCERT) for instance, include the national pledge on the front page so that students learn to say early in their school lives: "I love my country and I am proud of its rich and varied heritage.

This construction of the nation is strongly reflected in a variety of textbooks. In a UP board textbook, for instance, three friends, Seema from Bengal, Shama from Punjab and Sonia from Madras share a room. Their friendship suggests the happiness achieved by national integration even as they are carefully and stereotypically differentiated: 'Seema is from Bengal, Her hair is long, Her eyes are big and black. Shama is from Punjab. She is very fair. Her hair and eyes are brown. Sonia is from Madras. Her hair is black and curly. Her eyes are black."

In attempting to conceive of a nation which defines itself by its cultural variance, the textbooks clearly intend to give space to a multitude of voices. Cultural nationalism, a concept with which these books flirt, sees the essence of a nation in its distinctive civilisation, demanding that the natural divisions within the nation - occupational, religious and regional - be respected in the belief that the impulse to differentiate is the dynamo of national creativity. In a country with such huge variation in regional, religious and social culture it seems like a sensible inspiration for defining the nation."

And yet, ultimately the textbooks do not carry it through. They fail to impart a lived sense of cultural variation and difference. because of a fundamental and misrecognised discomfort with the very notion of a federated and diverse nation. The contradictory notions of what it is that constitutes India, are markers of a profound unease: post-colonial differentiated identity battles with the underpinnings of a unitarian colonial and western definition which traditionally sees the nation as a monolingual and homogeneous culture. Thus, although at one level there is an acknowledgement and even a celebration of cultural diversity, there is a contradictory impetus to obscure and marginalise this difference.

Thus, regional and cultural variation is restricted to its external and most obvious manifestation. There is no attempt to create an awareness of cultural difference other than that which is reflected in skin colour and names. Rashid, Manjeet, Seema, Shama all seem to live identical lives, share identical recreational activities, worship an undifferentiated god to whom they pray together and feel proud of the India which is constructed for them by their teachers and other adults.

What is never represented are the signs and practices which give meaning and reality to cultural differentiation. Culture is visible in a system of symbols and for it to be communicated, what is required is detail, the thick description which enables it to be understood and shared by students. Within the immediate experience of school students, it is visible in eating habits, games, attitudes to family members, ceremonies and festivals and dress.

The confusion between a valorisation of both difference and sameness is largely located in colonial and orientalist assumptions. Orientalism sets the framework by which nationalism defines itself - national as opposed to regional, as a concrete and unmixed identity. Underlying the need to celebrate diversity there lurks a concept of a nation as possessing a homogeneous culture which shares common intellectual ground with a nationalist search for continuity and a uniform cultural identity.12

In many ways therefore, the confused message of the textbooks arises from a profound anxiety about the inability to define the nation, if it is not spelt out in specifically homogeneous and unitarian terms.

THE SYMBOL AS THE NATION

Running parallel to the portrayal of a diverse cultural identity therefore, there exists an equally powerful rhetoric of the nation as a centralised and specific entity which can be synecdochially encapsulated. One means of doing this is to use public buildings and monuments as a mark of the grandeur and glory of India. As Eric Hobsbawm argues, conceptions of the nation, nationalism and nation states rest on exercises in social engineering; modern nations 'invent' tradition to locate themselves in a community so 'natural' as to require no definition other than self assertion." This assertion of self is played out on the site of visible symbols of the nation: popular monuments, buildings and statuary.

School textbooks, since they cannot bring these into the classroom, do the next best thing — they describe them in carefully nationalistic terms. Thus, in a Kerala state board textbook, a chapter on the Taj Mahal juxtaposes its beauty to its unique status as a source of national pride: 'Its beauty attracts thousands of travellers to our country. They come every year from all parts of the world to visit Agra and see the Taj.'14

Similarly, a chapter entitled, 'Letter from Delhi' is enthusiastic about the capital's unique status as "It is one of the most ancient and historic cities in the world."15 It is significant that it is the only city in the country which is so valorised. For, Delhi is not of course, just a city: as the capital, it is India. Deriving symbolic value from both antiquity as well as its status as the hub of a modern democracy, the lesson draws upon a combination of factors to list the diverse elements of its glory - that it is mentioned in the Mahabharat as Indraprastha, that it contains the Outub Minar, the Ashok Pillar, the Red Fort, the Juma Masud, Chandini Chowk, the Rashtrapati Bhavan, the secretariat blocks, parliament house, India Gate and the Dolls Museum. Here, its implicit status is underscored not by its culture (which could arguably be specific to a region) but its transcendant national buildings which contain within them an encapsulation of history and tradition.

But the importance of symbolising India is visible in textbooks of other states as well. A UP textbook for instance, contains a lesson pointedly entitled, 'Know Your Country' in which various symbols of the nation are introduced. Here, a grandmother quizzes the children with near-fascist enthusiasm:

Do you know our national animal?...Did they' tell you the name of our national bird?...Did they tell you the name of our national flower?th

The children only interrupting her to volunteer their own knowledge of the design of the national flag, the lesson ends with a litany of praise for 'our country':

Ours is a great country. It is a very, very old country. It is the country of Rama, Krishna, Buddha, Nanak and Mahatma Gandhi...Say with me 'Jai Hind'.¹⁷

The point of each of these symbols, whether they are buildings or birds, is to universalise

the nation into an entity which transcends regional distinction and time. The fact that from all over the world people visit the Indian Taj Mahal and that all over India the lotus is recognised as the national flower, implies that the essence of a single, united India can be recognised by everyone in any age. Any regional variation which exists is only minor in contrast to an over-arching central identity.

MYTHIFYING THE NATION

India is further elevated by collapsing the language of religion into a discourse of the nation. In the process, its entity is mythified, with an appeal which is altogether more powerful than that of territory. For instance in the poem 'Mother India', the nation is the divine goddess with 'Kanyakumarı as her holy feet.' IR Similarly in the poem 'My Land', to fight for the motherland has the resonance of a holy war:

No men than hers are braver/ Her women's hearts never waver/ I'd freely die to save her./ And think my lot divine.¹⁹

In yet another poem, 'A Nation's Strength', the heroism and grandeur of nationhood are asserted.

Not gold, but only man can make/ A people great and strong/ Men who for truth and honour's sake/ Stand fast and suffer long.²⁰

It is interesting that so much of the poetry section is devoted to a celebration of the nation. Poetry is of course a singularly effective means of prompting such celebration. the strong metre and rhyme create a rousing and emotive appeal which is both irresistible and uncritical. A transcendant appeal, moreover, transposes the nation to a realmoutside that of ordinary existence; implicitly not only is such a nation constructed as a powerfully unified entity, it is also outside the arena of moral critique.

IV

To locate the nation and its identity in the realm of myth and symbol is one form of definition. Another is to construct its people, its economy and its daily life in specific ways. The organisation of society as it is outlined in a school textbook is essentially mimetic in its intention. Suggesting the parameters of 'normal' society it delineates the structures of social order, the rightful ownership of power and the nature of the subject population.

SOCIAL ORDER

If we remember that the syllabus and textbooks are a reflection of the society in which they function,²¹ it is not unexpected to find that the ideology of bourgeois society runs through all texts, emphasising social order at all costs. All rulers, whether kings of the past or the officials of the modern

state, are constructed as benign, sympathetic and exalted – the power stratification of society seems inevitable and natural. A story in a Kerala textbook summarises this perfectly. "The Monkeys and the Sadhu' suggests that social order and hierarchy is natural and universal, the author discovering that within a tribe of monkeys "there is a King and a Queen of the monkeys, a Prime Minister, and a Commander in Chief".²²

An overwhelming number of lessons being set in the past, the king and queen are recurring signifiers of a benign exercise of absolute power. Underlying the narratives is an ideology which celebrates this absolute power as the only reliable dispenser of justice. It is in fact, neither a coincidence nor an unthinking celebration of a bygone romantic age which sets so many stories in the past. The locus of power and authority in the past residing clearly and visibly in the king, it is a simple matter to demonstrate the disbursement of justice through the active intervention and verdical of the king : certainly easier than to track it through the tortuous and more diffuse corridors of contemporary government departments.23 In the process it makes acceptable and even desirable, the exercise of an all-powerful state authority.

The lessons in the UP textbooks, for instance, abound with titles such as 'The Kind Prince', 'Solomon's Justice', or 'The King's Judgement' It is the king as ruler who possesses an unerring ability to glear the truth and dispense justice. Similarly, is the king who can galvanise action to save his people.²⁴

NCERT books repeat the pattern. In "The Righteous King' for instance we are introduced to a king whose problem was that he had no fault.²⁵ Though he scoured his kingdom, even in disguise, he found nothing but praise for his virtue and wisdom Similarly, in 'The King's Choice', the wise king has an uncanny ability to know when his courtiers are tracking him and unerringly depends on his loyal courtier alone ²⁶ Mos assertively, in the oft-anthologised 'The Story of Shibi Rana', we have the ultimate jus ruler who is willing to sacrifice his own life to uphold justice and mercy.

Even in stories which seem to interrogate notions of perfect rulers, existing structure of social order are re-enforced in subtle ways. Kerala books ostensibly produce as interesting contrast to the others. Here, no specific form of political control is reified in the Kerala books, the wise ruler does no emerge as a dominant symbol as happen in the UP books. There are instead, storie of foolish kings like Midas and Lear, as well as tales about others like the cruel kin Dionysius who is reformed by the faithful friendship of Damon and Pythias? or "The Proud King" whose royal arrogance is

humbled. However, these inadequate kings are never dispossessed or deposed. Instead, foolish kings like Midas learn wisdom, cruel kings learn gentleness and proud kings learn humility. The basic fabric of society is thus never seriously questioned or restructured.

RURAL AND URBAN INDIA: MODERNITY AND TIMELESSNESS

The inscription of geographical space in these books strongly reflects a specific construction of the social imagery. We see an India which is modern, technologically advanced and industrialised, but also one which is substantially rural. The rural world with its connotations of timeless and transcendental wisdom is valorised, but as we shall see, the picture is strangely unreal, the gaze strongly urban even when it is most celebratory.

All textbooks devote a significant space to a description of a rural idyll, focusing on the invaluable role of the farmer in contributing to the wealth of the nation. UP textbooks for instance, devote 20 per cent of all lessons on life in the villages. Rural life is constantly constituted as a pastoral ideal: "The Farmer' constructs a contented and harmonious life for Roopa and Kiran who 'have a small house in the village. They have a pair of bullocks, a cow and a dog... There are beautiful plants and flowers in the garden.' In 'Town and Country Life' we are told:

Life in the village is quiet and peaceful and healthy. You can always get very good fresh vegetables and milk and eggs there. 40

Kerala textbooks may describe a different landscape from the UP books but they are identical in their idealisation of the contentment and natural beauty of rural existence. The chapter entitled, 'A Village',31 describes Neema's house in a rural idyll of hills, a river, a church, fruit trees and cows. Ammu's comment, "Neema! Your house is beautiful! The farm is beautiful too. The lime trees are lovely. The cows are also lovely" draws upon a traditionally romantic construction of landscape and natural beauty. The inclusion of poems such as Wordsworth's 'Solitary Reaper' 12 and 'Daffodils' 11 heighten the construction of the 19th century romantic model of rural beauty.

Like the landscape rural people are also seen conventionally as superior to others. They possess a timeless and natural wisdom, frozen into a universal category of virtue. In 'The King and the Farmer' even the king learns from the generous wisdom of the farmer who plants fruit trees for the benefit of his children declaring, "I won't be selfish. I shall work for others too". The king ruminates, "We can learn a lesson from him. Our country needs many more selfless workers like him". The farmer, who is

never individualised, becomes a generic model of instinctive wisdom and virtue.

Discernible beneath the celebration, however, is an anxious acknowledgement of the uneven spread of modernity.35 The country is consistently described in opposition and relation to the city. It is an 'othering' gaze with the dominant vision remaining urbancentric. In the textbooks, the distinctions between the quality of life in urban and rural India are uneasily acknowledged, attempting resolution by positing rural life as superior to urban existence. 'Rules of the Road', for instance, contrasts the peace of rural life ('We don't have big crowds there') with Lucknow ("I see a lot of people everywhere. There is always a big crowd on the roads and in the streets."10) This construction of the rural ideal serves to legitimise the partial modernisation of India: the bucolic world is posited as a manifestation of the uniqueness of India, one in which tradition and modernity march hand-in-hand. It is, in fact, this simultaneity which seeks to define the nation and the tension between the two worlds becomes a means of claiming a special place in the world order.

Juxtaposed to the idealisation of rural India, therefore, there is a concurrent celebration of the march of modern progress. In fact, the essential joy of rural existence is asserted even when there is a partial acknowledgement of hardship. 'Town and Country Life' which admits of a debate about the relative merits of each, is structured as a conversation between those children who prefer rural life and those who prefer urban existence; however, the absence of the authorial voice which is present in the other chapters on the same subject, offsets the critique of rural life which is tentatively offered. In the conversation, the dominant voice emerges in favour of rural existence. Thus the hard physical labour of villagers is counterpoised by the declaration that it is "a healthy life and they like it". 17

In fact, there is a carefully asserted suggestion that villages too, share in the march of modernity: the same lesson goes on to assert, "But there are cinema houses in some villages now"; the absence of shops is irrelevant because "they can get all their food in the villages". Even water and power are not really problems any more: "there won't be any problem of water in the future. There are many new tube-wells in the villages now. Electricity is coming to the villages too."

Similarly, in 'Ashok Replies', a boy writes to his pen-friend in Japan about the rural progress of modern India, asserting that electricity is now available to farmers for all-year cultivation and that ploughs have given way to tractors. He goes on to assert: 'In fact, the villages are becoming better with their electric lights and good roads...Some Indian

villages today have all the advantages of a city without many of its disadvantages.

Textbooks which view modernity as the only paradigm of development, also inevitably construct a nation's evolution in terms of a post-facto justification of state economic policy. The most stark example of this is in a chapter which contrasts contemporary India with the India 50 years ago. In 'Ashok Replies' (to a Japanese pen-friend), there is a paean of praise to the progress and modernity of the new India. Ashok tells his friend that while in his grandfather's time there were no buses so that he had to walk 30 miles to school, today there is a school in every village. Now education is free and "every parent, rich or poor, is anxious to send his child to school". It is revealing that the site of backwardness and underdevelopment is automatically and invariably located in rural India. In contrast to this we are assured that:

No visitor to our country leaves without seeing and admiring at least a few of the dams we have built. Thanks to the 5-year plans, there are big steel plants and factories for manufacturing railway carriages. w

For all their focus on rural India, therefore, the textbooks speak from an essentially external position. Ironically, in the anxiety to smooth over any possible perception of rural disadvantage, the text does not interrogate the basic assumption that shops, cinema halls and electricity are in themselves signifiers of contentment.

Progress and development is thus narrowly conceived of; restricted solely to roads and lights, it offers no alternative pattern of rural development which suggests a paradigm of modernity which is distinct from industrialisation or access to a commodity culture. There is therefore, a profound chasm between rural and urban India: when it is celebrated, the village is transcendental in its beauty and timelessness; on the other hand its location in the present is a discourse upon the transformation of backwardness through modernisation. This dichotomy is an unacknowledged affirmation of and anxiety about the loss of the rural within the cultural universe of the increasingly hegemonic urban.40

This is visible both in lessons which deal with development in modern India as well as with the types of knowledge and information which it is considered valuable for the modern Indian student to possess. The value attached to such knowledge, the ultimate prioritisation of modernity over tradition, universal truths over local knowledge are indicative of the cultural aspirations of a society.

The problem with such a chapter is that it suggests a single paradigm of modernity, so that the march of urban industrialisation is seen as an unproblematic virtue. It promotes an ideology which structures technological progress as the defining mark of a self-respecting nation. For instance, the devasting demographic shift towards urban migration is treated unproblematically and is even celebrated as a mark of progress: "Many families are rapidly moving to cities and towns in order to find jobs in factories and industries". "I'The stunning blindness of such a statement creates a world in which the problems of land dispossession, the crippling effects of a failed monsoon or the debilitation of migrant workers do not exist.

With this treatment of the subject of technological development, the child reading these texts fails to see the costs of this modernity: social, cultural or ecological. A celebration of this inferiorises alternative modes of development, alternative priorities. In the process, textbooks wilfully blind the middle-class students to whom they address themselves. The beneficiaries of the miracle of modernity and capitalist progress know nothing of its price: the dispossessed peasants, the children who labour in factories and the poor who have no access to the open markets thrown open to international capital. The victims of these systems become forever the unknowable 'other' of modern India, forgotten because they remain hidden from the view of those with the knowledge and power to effect change.

DISTRIBUTION OF CAPITAL

To forget and to ignore this other India is possible only through the construction of an ideology which appeals to different sentiments. The iniquities of the distribution of capital is dealt with through a devaluing of the very desire to acquire wealth. Drawing upon Gandhian asceticism, the other-worldly tenets of brahmanical Hindu scriptures and on a protestant celebration of the work ethic, this discourse seeks to abjure the pursuit of money. On the other hand, the concretely visible poverty and the remnants of an opposing socialist philosophy prompts a concomitant discomfort with existing patterns of economic distribution.

Consequently, school textbooks treat the issue of wealth, its acquisition and its importance with distinct unease. Uneasy with the acquisition of wealth as an ideal, they constantly suggest that it is synonymous with greed - even as they consistently and anxiously return to the theme. A single reader from Kerala for instance, 42 includes the story of Midas, the story of 'Four Greedy Young Men' who treacherously kill each other because each covets the buried pot of gold they find and a story entitled, 'The Finest Thing in the World' in which two brothers achieve wealth and power but the third achieves contentment. The moral of all these stories can be encapsulated in one brother's admission, 'In spite of my wealth I am tired and unhappy' and the other's statement, "He has after all found the finest thing in the world. He has found contentment." Similarly, another reader deals with the same attitude. The Imp and the Peasant's Bread' describes how the devil's disciple can ruin a oncegenerous peasant by ensuring that he has a surfeit of possessions. Conversely, 'Kindness Rewarded' tells of the great reward for two poor peasants who give what little they can, to the visiting gods.

There is here a curiously conflictual attitude to the questions of labour and profit. On the one hand, there is an exhortation towards hard work but on the other, approval for the fruits of labour is absent. Instead, there is an ascetic disapproval of the possession of plenty. Taken 'ogether, the stories suggest the value of maintaining an economic status quo. A sudden access of wealth leads to ruination as in the case of the four young men and the imp's peasant.

A straightforward warning against a hope for easy wealth is found in the story of the miller Whang⁴¹ who is inspired by a neighbour who dreams of buried gold on his land and digs to find it. Whang stops working at his mill and finally one night dreams of gold under the walls of his mill. Inevitably he digs for it, does not find gold but as a result of his act, brings down the mill. Students are prompted to draw the conclusion that it is foolish and destructive to hope for sudden accessions of wealth. A miller's role in life is to produce flour not to search for wealth.

CONCLUSION

If we argue that the construction of the nation in these textbooks is a deliberate exercise in ideological structuring, we need to address ourselves to the question of whose and which ideology is reflected. It seems superfluous to say that these textbooks function as reflections of the dominant ideology of state policy: the more interesting questions are of how this is established and whose state is ultimately reflected in the process.

While no list of the complex power lobbies which seek to imagine a nation in their own image can be entirely complete, it is clear that there are significant conflicts of interest among them. The size, diversity and the particularly segmented nature of Indian society and economy splinter the articulations of these conflicts and this is reflected in the demonisations and celebrations which appear in the textbooks.

One manifestation of this tension is between the urban industrial and professional classes on the one hand, and the rural hegemonic class of rich farmers on the other. A further tension is clearly visible between a centralised political class and regional groups which through a variety of caste alliances have sought to wrest the political

initiative from traditional high-caste and economically powerful groups.

A summarising glance at the configuration of the nation in these textbooks, reveals variety of discourses which simultaneously contest and complement each other, thus both reflecting and shaping the discourse India's diversity is acknowledged but only to be superimposed onto the larger trope of unity - via myth, symbols such as the flag and history such as the freedom struggle and nationalist leaders; the unitary images of flag, bird and anthem holstering the legitid mising claims of a centralised political eliter Similarly, the superiority of rurar India is celebrated, but so is modern, industrialised India, the two aspects appearing in uneasy juxtaposition. Thus the farmer is important in the discourse of the nation, but it is only the rich, independent farmer and not the agricultural worker or the poor peasant who appears. Finally, the social order and strong state power, dear to the heart of the bourgeoisie are valorised and economic disparity is glossed over by the suggestion that wealth is irrelevant to true happiness.

The incorporation of diverse voices only serves to strengthen the dominant, rather than weaken it. The acknowledgement of the presence of different social groups does not bring the student any closer to the reality they inhabit, only deepening the gulf between the dominant and the subject worlds. Through a process of essentialisation, mythification and romanticisation, they make strange the very categories which they appear to celebrate. There is no serious subversion or even interrogation by alternative paradigms set by religious minorities, dalits or even by questions of gender. The fact that these textbooks are produced by state education councils specifically set up to do away with the most blatant forms of caste and religious underpinnings does not alter the privileging and problematic nature of their ideology.

Whither Rural Financial Institutions?

Bhupat M Desai N V Namboodiri

Doubts have been raised regarding the financial viability and developmental objectives of rural financial institutions (RFIs) and there have been proposals to restructure these institutions to address these concerns. This article argues against this approach as it is based on inappropriate understanding and evaluation of the viability of the RFIs. Instead, the article, on the basis on recent researches and studies, makes recommendations to improve the present network of RFIs.

FOR quite some time now doubts have been raised about the desirability of continuing rural financial institutions (RFIs) in their present form. These doubts seem to have been based on concerns related to both the financial viability and developmental objectives of these institutions.

In 1989 Agricultural Credit Review Committee (ACRC) chaired by Khusro recommended merger of regional rural banks (RRBs) with their sponsor nationalised commercial banks (NCBs) precisely on the ground of their financial non-viability. The committee also recommended merger of short-term and long-term co-operative credit structures for similar among other reasons.

In the wake of liberalisation in 1991 Narasımhan Committee recommended creation of rural banking subsidiary of the NCBs by amalgamating their rural branches and the RRBs. Since then several formal and informal proposals have emerged. These even include such ideas as dismantling one of the three tiers of short-term co-operative credit structure, i e, state co-operative banks (SCBs), and integrating private moneylenders as agents of the RFIs. The former is suggested to improve the gross margins of the lower tiers. And the latter is to improve the loan recoveries and appraisal as these private lenders have better local feel and peer pressure. The need to improve loan appraisal seems to have also been prompted by a viewpoint that the RFIs have accomplished little, if any, of their social

Excepting ACRC's proposals, none of these proposals is based on well-studied grounds. Some of them seem to have been even carried away by a viewpoint in international community that the past approach to building rural credit is ill-founded and has caused unviability of RFIs, besides hardly promoting any of its social objectives [see. for example, von Pischke 1983; Adams 1988]. But, as will be shown subsequently neither the proposals of the two committees nor this international criticism has much sound basis. Thus, there is a need to take a dispassionate look at these proposals and criticisms. The paper attempts this, based on first author's recent researches, besides some other major studies.

FINANCIAL VIABILITY

In their 1993 publication Desai and Mellor showed that much of the international criticism is based on a framework and methodology that are deficient in analysing financial viability of RFIs. They further showed that as many as 19 out of 25 RFIs spread over Bangladesh, India, Sudan, Thailand and Honduras have scale economies and/or constant returns to scale in their transaction costs. In other words, their average transaction/administrative costs (i e. per Rs 100 of business volume) are declining and/or constant (Annex 1 gives definition and picturisation of scale economies). This implies that these institutions would improve their viability through expansion in business volume rather than the increase in their gross margin as suggested by ACRC.

Desai in his publication (1994a) provided a more robust framework and methodology than used by Desai and Mellor in addition to providing more recent and comprehensive empirical evidence for all the four grass roots level RFIs in India. Before presenting this, the deficiency of study of financial viability by ACRC is briefly discussed.

ACRC defined viability by measuring unit (or average) net margin in lending. This is computed as interest revenue minus interest cost minus unit transaction cost attributable to lending. In other words it is the difference between interest spread and transaction cost per Rs 100 of loans. If this margin is negative, then an institution is considered non-viable. This method has serious shortcomings.

- I It is inconsistent with the policy concerns for the viability of an institution rather than its any single service like lending or technical advice. It is the institution which must remain viable. This institution not only lends but also borrows and mobilises deposits, besides providing other services. Many of these operations are joint/ complementary.
- 2 Most transaction costs are common to all these services. Their allocation to lending is artificial, arbitrary and fraught with assumptions that can prove misleading.
- 3 It is not uncommon to find loans being made to depositors and/or to those whom depositors know. Hence attributing unit

- gross margin, i.e., interest spread to lending alone is erroneous.
- 4 Interest rates on borrowings now range from zero per cent on current deposits to 12 per cent on some fixed deposits. Depending on which ones of these are considered and for what types of loans unit financial costs (i.e., interest cost would also vary significantly.
- 5 Non-interest revenues are ignored. They can be and are significant for at least some RFIs.
- 6 ACRC's sample of primary agricultura co-operative credit societies (PACS) and rural branches of the public sector commercial banks (NCBs) did not ever constitute one per cent of these institutions
- 7 ACRC when considered unit net margin (1 e, average profit) for an institution i found it to be positive for all RFIs (excep RRBs for which no result is reported!) This reinforces the first deficiency discussed above.

Desai (1994a) considers theory of cost to identify whether average costs of variou types decline with the expansion in the volume of business, i e, operation of scaleconomies. The scale economy is measure for each of the major services as well as al of them together. The former is termed a partial scale economies and the latter total scale economies. These economies ar identified not only for transaction costs bu also for financial costs and total costs (i e transaction plus financial costs) of an insti tution. In other words, the unit of analysi is institution and each of its major operation Moreover, when financial cost 'which i usually for deposits and borrowings) ar considered to be a function of even loan it implicitly recognises the opportunity cos of loan delinquency and that of loans mad from owned funds. Thus, this cost is also built into total costs which constitut transaction plus financial costs.

Desai (1994a) provides an evidence that there are scale economics in transaction cost of the (1) state co-operative land developmer banks (CLDBs), (2) NCBs, and (3) RRB making profit. For PACS, and for RRB with losses there are constant returns t scale. The former implies that these thre RFIs have a decline in their average

transaction costs, while the latter suggests this to be constant for the other two RFIs. Furthermore, all these RFIs average financial costs are constant. And finally, NCBs have declining average total costs, whereas the remaining RFIs have these costs constant, i.e., their average total costs curve is horizontal (see Table 1).

These findings suggest that all these RFIs can improve viability by expanding their volume of business. They also imply that the interest rate and gross margin on loans need not be increased now to improve viability of these RFIs. These conclusions also follow from more disaggregative data for two Farmers Service Co-operative Banks in Kerala [Desai and Namboodiri 1993, 1995b], some PACS in Gujarat, a branch each of the district central co-operative bank and the Dena Bank in Gujarat, RRBs in Gujarat and in south Gujarat in particular, an RRB in Uttar Pradesh, and all DCCBs [see Desai 1995; Desai and Namboodiri 1995a; and Desai, Gupta and Tripathi 1989].

Question now arises as to why scale economies arise for RFIs. They seem to result from more than one crop loan in a given year, term loans for wide variety of purposes, and deposits of various types, besides increase in number of clientele served and other operations such as input sales, consumer goods sales, etc, by PACS. Such multiple and diversified services enable RFIs to spread their common costs and risks in rural banking and thereby facilitate achieving scale economics.

Indeed, PACS have even scope economies in both transaction and total costs (see Table 1). This means that when one of its operations, say, crop loans increase the marginal (i e, incremental) costs of another operation say, input sales decreases and viceversa. This is because when crop loans increase the demand for input increases with a consequent decline in marginal costs of managing the input sales. Before we turn to the discussion of developmental objective of RFIs, three issues of great significance must be elucidated.

One, the evidence on the operation of scale economies implies that when RFIs expand their business volume those making loss would reduce the loss and those earning profit would increase it under the given interest rate and margin structures. Two, the scale economies in various costs are maximum/second largest for lending compared to other services (Table 1). In other words, average costs of making loans decline more sharply than that of deposit collection, borrowing, etc. This then suggests that RFIs have to now expand loaning more than other operations to fully reap scale economies. And three, many bankers seem to perceive that rural banking is an unviable proposition because of high transaction costs in serving innumerable small accounts and high risks in agricultural loans. We presume when they refer this they have average (i e, unit) cost in view. This is what it ought to be. And based on this they advocate increase in interest rates for rural credit. But in a dynamic setting the issue is whether this cost is rising. High average cost does not

necessarily mean rising such cost. Our evidence as discussed earlier is that the average transaction costs have declined and/ or are constant for the RFIs. This is the case even for their average total costs. Our plea therefore is that the issue of high cost must be separated from that of rising cost so that better understanding evolves to identify more

TABLE 1: PARTIAL AND TOTAL SCALE ECONOMIES OF VARIOUS RFIS

RFIs	Data and Functional Form	Output/Operations F	Partial/Total S	cale Econo	mies in

		Scope Economies*	0.036	0.674	0.001

^{*} Scope economies parameter should be negative because marginal costs of one output decreases when the other operation increases and vice-versa.

b Statistically significantly less than 1 suggesting scale economies.

Notes 1 Partial scale economies in transaction costs, financial costs and total costs are derived from the estimated translog cost function (TRANSLOG).

$$\label{eq:continuous_equation} \ln C = \ln \alpha \, o + \sum_{h=1}^{N} \alpha \, n \, \ln \, Xn + \frac{1}{2} \, \beta \, \prod_{n=1}^{N} \ln \, Xn$$

where Xn is the different types of operations and C is the cost.

2 Log-Log-Inverse (LLI) cost function In C = In bo + b1 In Y + b2 1/Y

where C is the cost and Y is assets plus liabilities.

This functional form was used because translog function estimation did not give expected a priori positive signs of the coefficients. However, both these functions (i e, TRANSLOG and LLI) are consistent with the theory costs that give U-shaped average cost curve. Two such other functional forms are cubic and transcendental the estimation of which had statistically less satisfactory results

Source: Adapted from Desai (1994a).

Economic and Political Weekly August 3, 1996

a Statistically not significantly different from 1 indicating constant returns to scale.

appropriate policies. That policy certainly does not lie in changing their structures. What is needed is to further strengthen their decentralisation and autonomy to suit agriculture that is geographically dispersed and agro-climatically diverse. It is this type of liberalisation that is the need of the hour. We have more to say later.

DEVELOPMENTAL OBJECTIVE

Two sets of criteria are considered from Desai (1994a) and Desai (1994b). These are:

- (1) Contribution of credit-financed investment to agricultural growth in preand post-green revolution (GR) era, and
- (2) Financial performance as revealed by financial and credit deepening, creditdeposit ratio, and banking habits of the rural folks.

On first of these two sets of criteria, Desai (1994b) shows that RFIs credit has enabled the farmers to adopt land, labour, and intermediate inputs with complementary capital augmenting technological change. While this has been well recognised by other studies [sec, for example, Gandhi 1990; Binswasger et al 1989; NABARD 1992-93; Banwari Lal 1992], our evidence not only confirms this but even identifies the extent of agricultural growth accounted for by technological change, and institutional credit.

Technological change accounted for 38 per cent in the growth of agricultural production during 1950 to 1990. And, the institutional credit-financed investments which increased by about 12 per cent have accounted for about 9 per cent of growth in agricultural output during the same period (see Table 2). These investments are for the purchase of labour-service, intermediate inputs like seeds, fertilisers, etc, and farm capital like wells and pumpsets, cattle, farm implements, tractors, etc. More importantly, both technological change and institutional credit have made larger contribution in post-GR era compared to pre-GR phase. Thus, technical change accounted for about 43 per cent in agricultural growth in post-GR compared to only 27 per cent in pre-GR phase. Institutional credit in post-GR increased by about only 7 per cent and accounted for as much as 9 per cent of growth in agricultural output as compared to 21 and 12 per cent respectively, in pre-GR era. In the 1970s and 1980s absolute poverty in rural areas has also declined and for which credit oriented IRDP, besides higher agricultural growth, has made some favourable dent [see, for example, Mellor and Desai 1986; Ahluwalia 1986; Rao et al undated; Banwari Lal 1992; Mohanasundaram 1993].

The preceding findings reinforce the role of RFIs in promoting agricultural development. This role is that credit must accompany/follow rather than precede

APS = Agricultural Production Sub-system

- Rural credit includes both agricultural and non-agricultural loans
- 2 Agricultural credit includes loans to agricultural production sub-system (APS), agricultural input distribution sub-system (AIS), and co-operative agro-marketing and processing sub-system (AMPS).

Source Adapted from Desai (1994a).

to technological change in agriculture. In other # words, credit delivered in technologically 1 stagnant agriculture fructifies much less than (when agriculture is technologically dynamic. (This has important operational implications 1 that centre around a strategy that credit should i, be in the form of new farm inputs, assets, and services as has been increasingly the case since mid-1960s. This must be the case not only for crop-agriculture but also animal husbandry, fisheries and even rural nonfarm economic activities. In the language of loan appraisal it suggests that returns to credit in such environment are much higher. And when this occurs even the loan recoveries are higher [see for some evidence on both these Rao 1994; Rao et al undated; Mohanasundaram 1993; Banwari Lal 1992].

Regarding the financial performance, Table 3 reveals that financial deepening through deposit mobilisation in rural areas has dramatically increased. Highly successful deposit collection is not confined to the NCBs and RRBs but also PACS which are most ill-equipped to perform this function. This remarkable deposit mobilisation has resulted from RFIs decentralised network. It is also an outcome of increased incomes of rural sector, since the advent of the green revolution. This success in financial deepening is also revealed by credit-deposit ratio which reversed from more than one to less than one since late 1960s. This has not, however, reversed credit deepening of the rural sector. On the contrary, even this has significantly improved over time (see Table 3).

The dramatic performance in financial deepening also suggests that the mass rather than class banking has inculcated banking habits. This is no mean achievement for the rural areas. Nor is the relatively less dramatic performance of RFIs in credit deepening of these areas. To conclude, RFIs performance in developmental objective of encouraging banking habits, promoting private investments, and higher and more effective agricultural growth with equity in the rural sector is quite commendable. And it reinforces that the structural change of the types recommended is anwarranted on this ground, too.

WHAT ARE THE STRENGTHS OF RFIS?

RFIs strengths lie in their interest rates for rural credit, and the six organisational principles for institutional development. These are (1) multi-agency approach, (2) forms of organisation, (3) vertically integrated structure, (4) density of field-offices, (5) reach of chentele, and (6) multiple and diversified services [for the evidence on this for other developing countries see Desai and Mellor 1993]. Both these instruments of interest rates and institutional development

are critically but constructively discussed in what follows.

Interest rates: Contrary to both the popular and the government belief [GOl 1994-95] there is no interest rate subsidy on credit for the agricultural sector as a whole. Excepting for only 8 years in about last four decades since 1950 average real interest rate on this credit has remained positive (Table 4). This definition of interest rate subsidy is universally accepted. It may be because allocating transaction costs to credit among other operations including different types of loans is almost impossible because most of these costs are common to the management of sources and uses of funds in any financial institution. More-ver, the measurement of capital itself is an unresolved issue even in the theoretical literature.

The eight years in which the average real interest rate was negative were the years of exogenous oil shocks and severe droughts

when inflation rate was abnormally high. This, the positive average real interest rate in most of the years has been healthy for both the borrowers and the lenders. The borrowers may not have been much induced to substitute credit for their internal saving including labour. This saving, i.e., self-finance accounted for 98 percent for costs for labour. 91 per cent for farm assets, and 78 per cent for intermediate inputs [see Desai 1994b].

Nor the borrowers may have been encouraged to wilfully default. Most of such default seems to have arisen from the government's loan and interest waivers. Lack of interest rate subsidy also suggests that the reasons for the low viability have to be sought in other factors. These will be discussed subsequently. Yet another healthy feature of interest rate policy is that it has provided fairly stable nominal rates (Table 4).

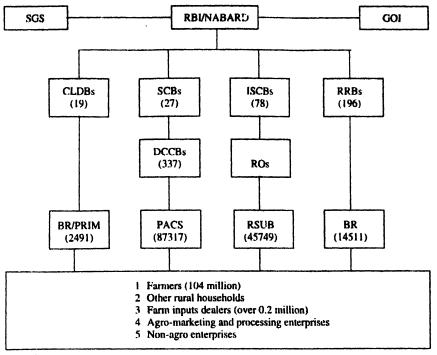

These interesting outcomes of interest rates have emerged from the policy which was

on the whole flexible and built tiered (i e, different) interest rates for different amounts and purposes of loans. Such a policy may be better termed as guided interest rate policy. This approach to interest rates is needed primarily because any financial market is inherently imperfect dealing as it does in future transactions. Credit transaction is fundamentally different from the transaction of say, buying a soap or ice-cream. The latter transaction ends for both the buyers and the sellers at the same time at which they undertake it. But the loan transaction is not completed until the entire loan cycle of dispensing, monitoring and recovering credit is not over. And during the intervening period both lenders and borrowers witness changes that are not perfectly predictable. Consequently, the central monetary authority provides a direction in the determination of interest rates. Such a policy is common for agriculture and other critical sectors like infrastructure and exports in most countries. Thus, we recommend that the past approach of tiered interest rates on rural credit with minimum and maximum should be considered as desirable as well as necessary. Our recommendation is also guided by the fact that neither the co-operatives which have now completely deregulated interest rates nor the NCBs and RRBs which have partial deregulation, have much changed the interest rates on rural credit. And last but not the least recommendation is a restraint on interest rate changes because of three reasons. One, interest rates of informal lenders have now declined. They are fairly comparable to 10 to 18 per cent prevailing with the RFIs in 1980s (Desai and Oza 1995; Desai 1995]. The second is our evidence on

scale economies of RFIs. In this situatio any hike in interest rates under the guise q improving viability is not only unwarrante but could be harmful to these ver institutions. This is because demand for run credit being now interest rate elastic any ris in interest rate would reduce this deman with a consequent adverse impact on scal economies [Desai and Mellor 1993; Desai 1994a]. And three, the nominal interest rate that prevailed in 1980s are not very locompared to the existing inflation rate about 8 to 9 per cent. Our recommendation has also a virtue in not politicising intererates policy.

Multi-agency approach: This approac provided some choice to the rural customer It has also improved an access of the run poor. Their share in rural credit issued durin the year has increased from 39 per cent | 1978-79 to 51 per cent in 1989-90. And the share in loans outstanding has increase from 42 per cent in 1978-79 to 49 per ce in 1989-90. Yet, another gain of this approac is that it has developed much needs organisational forums like state, district at block level co-ordination committees of n only all RFIs but also the government as other auxiliary service functionaries. Sur forums are highly essential for both avoidit duplication of services and better backwa and forward linkages so critical to fructi rural credit better. Lastly, India is not unique in multi-agency approach to RFIs. Almo all countries in both developed (such Japan, Italy, France and the US) at developing world have this approach [f evidence on this see Desai and Mellor 199.

Two types of systemic and procedur innovations in multi-agency approach m be introduced. One, some flexibility in distr and service area credit plans may be desiral to provide real choice to the rural househole This is because under these plans there effectively only one institution at the gra root level to which farmers can turn for th credit needs. This flexibility is also desiral when any agency servicing a particular gro is unable to meet the credit needs due to hi overdues, lack of funds, etc. And two, crec cum-deposit passbook recording ea transaction with each institution may given to the customer as well as other RF NCBs and RRBs may computerise st record to more efficiently manage th operations. This innovation would a eliminate duplication of loan to an individ for one and the same purpose. Thus, prefer all four RFIs to function separat rather than the mergers like the or suggested by ACRC, and Narasimi committee.

Forms of organisation: Even the state oriented forms of organisation is not unit to India [see, for example, Desai and Mel 1993]. This may be because financial mar

w at a t

being inherently imperfect no private entity would enter the rural sector. So the choice of state-oriented form of the organisation is inevitable especially initially when this market is being developed. This choice in 1950s may be considered best on a hindsight to also capitalise village co-operatives that emerged on their own in late and early 1900s as they had limited access to larger financial market. Even the commercial banks did not enter rural financial market until they were nationalised. Now that demonstration of reasonably successful RFIs has emerged if any private entity wants to enter this market it may be permitted. Terms and conditions on which this bank would undertake rural banking should be same as those of the existing RFIs. Competition among these institutions should be on level-playing field.

Three important restructuring may, however, be recommended. One, capital base of co-operatives especially PACS and CLDBs, and RRBs like NCBs, may be raised and/ or replenished. Two, beneficiaries of all RFIs may be required to regularly participate in their equity-capital. This may be as small as Rs 10 per beneficiary. But there should be steep ceiling on such holding for an individual to ward off domination from the powerful in agriculture and/or industry. This would make RFIs not only accountable to the state but also to their customers. Moreover, it would facilitate peer pressure essential for sound rural banking. And three, CLDBs may diversify their sources of funds. They may once again subscribe to ordinary debentures, rural debentures and attract funds from other financial institutions like LIC instead of merely depending on NABARD.

Vertically integrated structure: This organisational structure is shown in Figure 1. Such structure is both necessary and desirable in building RFIs. Following Desai and Mellor (1993), we suggest there are four major gains of this vertical structure. One of this is that it provides a decentralised institutional network to be close to the rural customers without which sound and serviceoriented rural banking is impossible given the geographical dispersion and agro-climatic and other diversity of agriculture. Secondly, it cross-supports the field-units with varying loan, deposit and other business potentials. Thirdly, it integrates the huge rural financial market with the rest of the economy by, say, borrowing funds when in deficit from the apex levels and providing them when in excess. And, fourthly, it also enables promoting larger goals of agriculture and rural development. Some of these are already reflected in our earlier discussion.

But the vertically integrated organisational structure seems to have led to over-bureaucratisation, top-down tendencies in management and neglect of harnessing local initiatives for felt needs of the rural folks. We, therefore, recommend five innovations that would facilitate achieving the mission of decentralised rural banking.

One, the field-level units may be given much more autonomy with accountability. This is especially needed for identifying credit-worthy borrowers, scale of finance for crop loan to more fully account for labour and new inputs, unit cost of investment for various farm asset loans, combining working capital loan with a term loan for these assets (as under IRDP for dairyfarming), margin money, loan documentation and recovery schedule. Similarly, they may be allowed to formulate and implement loan and deposit schemes that suit the local needs. These are clearly now warranted as the human capital with requisite knowledge is now built, and also to account for local variations. Two, apex institutions including NCBs should make matching contribution to refinance and/or temporary credit accommodation from RBI/NABARD to their field level constituents. This is required to promote a stake and accountability of the controlling units which seem to take rural credit casually. It is also needed because in 1980s rural deposits have flown out to other areas at the cost of rural credit needs (compare rows 1.1 and 1.2 with rows 4.3 to 4.8 in Table 3). Three, PACS staff may be brought under suitable regular employment terms and conditions to provide incentives and encourage accountability. Their apex-levels and NABARD/ RBI may constitute a fund with incrementally growing their contributions for this. Four, managing committees of the PACS may have sub-committees for loans and their recovery, input sales, consumer goods sales, and funds mobilisation to assist the secretary. And five, incentives of the staff may be made performance-linked. Performance may be judged not only in terms of targets for loans and deposits but also loan recovery, examples of result-oriented better coordination with other agencies, etc.

Density of field-offices: All four RFIs together have one office for every 1,000 hectare of net sown area in late 1980s. This compares poorly with China's four such field-offices. Recent policy of closing lossmaking branches of NCBs and RRBs would make this still more unfavourable. There is thus a clear need to improve the density of the field-level units. The basic rationale for this lies in four factors. These are (i) it improves accessibility for both rural households and the formal lenders which in turn generates more intimate understanding and situation specific identification of potential for rural banking, (11) it enables intensifying and widening the scope of this banking to reap scale and scope economies, (iii) it facilitates more competition with informal lenders to further reduce their hold, including interest rates, and thereby improve coverage of rural households, and (iv) it reduces transaction costs of rural borrowers and depositors.

Two important innovations are recommended. One, the establishment of field-units may be implemented altogether differently. In the case of co-operatives, the local folks may be made to function as co-operatives with sound performance before federating them with the apex levels. And two, NCBs and RRBs branch managers and a staff or two may intensively interact with the people and area likely to be served to induce healthy and loyal relationship besides creating more informed judgment about business potential.

Reach of rural households: Larger coverage of rural clients is an important source of reaping full scale and scope economies. This seems to have occurred because the coverage of rural households has increased from 20 per cent in 1961-62 to about 30 per cent in late 1980s. There is still a large untapped potential. But RFIs especially NCBs hesitate to fully exploit this potential because of some inconvenience and misconceived perception of high costs of serving small accounts. Computerisation, rather than non-coverage, is more appropriate solution for this, besides recognising that the larger coverage facilitates reaping scale and scope economies. Yet another innovation could be making group loans to control costs. These groups should as far as possible be homogenous. But, this new approach need not be the only mechanism to enlarge the reach. In the case of PACS loans may not be restricted to past good borrowers. Wherever they cannot enrol non-land owners as members by-laws may be suitably amended.

The coverage of delinquent borrowers may be organised separately for the non-wilful and wilful. The former may be identified as those who have consistently paid part of their overdues for three years. And the wilful defaulters may be those with non-repayment of loans for three consecutive years. For the former, their overdue loans may be rescheduled considering the existing policy in this regard. This is suggested because some of the delinquencies have arisen from inadequate loan appraisal and monitoring by RFIs. Names of wilful defaulters may be published and revenue cases against them may be filed, besides recovering their dues from their share capital and/or sale of assets charged. And finally, NCBs and RRBs should enlarge their coverage of not only rural households but also farm input dealers and agro-marketing and processing units. Similar should be done by DCCBs which serve PACS that are eminently suitable retailers of inputs, consumer goods, etc. We have more to say on this later.

Multiple and diversified functions: This esults from various services RFIs provide. Four of these may specifically be discussed. One of these is the lending to farmers for production of wide variety of crops (i e. prop-loans), and for purchase of different farm assets (APS - agricultural production sub-system). It also includes term-loans to he landless and others for farm capital and non-farm rural economic activities (APS). All of these are termed in official language as 'direct' rural credit. Another loan service includes an innovative portfolio of 'indirect' agricultural credit to private and institutional agri-business for farm inputs marketing (AIS -agricultural inputs distribution sub-system), co-operative agricultural produce marketing and processing (AMPS) and even rural electrification (AIS). The second rural panking operation includes deposits of wide variety and different maturity. The third one which is applicable only to the PACS is input sales, consumer goods sales and sometimes even farm produce procurement and marketing. Incidentally, even other RFIs undertake some farm input sales indirectly by forging a link of their rural householdporrowers with those who supply the inputs. And last but not the least important function is technical services (AIS). While noncooperative RFIs promote this by hiring relevantly qualified personnel, the cooperatives promote it not only by such staff out also by their managing committees which invariably include farmers and others who hough not always formally educated in igriculture but have practical and operaionally more useful knowledge of agriculure. To conclude, these various functions have a direct bearing on backward (BWL) and forward (FWL) linkages among the three sub-systems of AIS, APS and AMPS as diagrammatically shown below. APS loans encourage demand for farm inputs and services, while AIS and AMPS loans induce their supplies.

These linkages increase agricultural productivity, production, value added and incomes of farmers. Additionally, they facilitate reaping full scale and scope economies by RFIs.

Some suggestions to improve the multiple and diversified operations now follow. In the case of PACS three recommendations are made. One, PACS should be equipped with appropriate infrastructure for mobilising deposits and for storing inputs and consumer goods. Two, DCCBs should promote cash credit facility to PACS to enable them to undertake non-credit operations like inputs and consumer goods sales. Such credit is

beneficial to the PACS, their members and DCCBs alike [see Desai and Namboodiri 1995b]. And three, DCCBs may give a part (say, one-third) of the 'kind' component of crop loans to PACS as inputs distribution credit. This would enable the PACS not to borrow twice for one and the same purpose, i e, once to make the crop-loans in 'kind', and another for buying inputs to supply against this component. This in turn would save their interest costs, enlarge their borrowing capacity and improve viability. It would also lead to adequate and timely availability of inputs to their members. Moreover, it would be consistent with RBI's policy of transferring funds sanctioned for 'kind' component to input suppliers. This financial innovation would require both PACS and DCCBs to maintain two books of accounts, namely, one for crop-loans in 'kind' and 'cash', and another for inputs distribution credit. Since the former already exists only the latter is required. In the case of CLDBs, we recommend that they should also be permitted to make 'indirect' rural credit of medium to long-term duration for commercial intrastructure for farm input dealers and agro-marketing and processing enterprises. Our earlier suggestion on enhancing and diversifying their funds would enable them to undertake this type of loan business.

As regards NCBs and RRBs we make four recommendations. One, these banks may fully exploit the earlier mentioned innovative policy of 'indirect' rural credit. And for this they may be provided refinance and/or

temporary credit accommodation as they seem to have funds shortage at the time when demand for credit from APS, AIS and AMPS emerges. Two, their branch level loan targets should also include these types of rural credit as a part of district and service area credit plans. This would be consistent with ACRC's recommendation to estimate credit demand for all the three sub-systems mentioned earlier. Three, these banks may innovate in deposit schemes by considering credit linked deposits under which the depositors are assured of term loans once they accumulate required margin money in their deposit accounts. They may also organise fixed deposits for as short a duration as 7 or 15 days with commensurate lower interest rates. China has successfully implemented such schemes with as low an interest rate as 1 to 2 per cent. Both these deposit schemes are highly suitable to short, seasonal and small surpluses so characteristic of agriculture. Even PACS may utilise such deposit schemes. And four, both NCBs and RRBs may innovate in organising technical services on a peripatetic basis for a group of branches. Costs incurred for this may be viewed as investments which would have implicit returns in the form of better loan recoveries and customer relationship.

CRITICAL PROBLEMS OF RFIS

Three highly serious problems of RFIs are:

(1) High and persistent loan delinquency (see Table 5).

Table 5 Delinquency Rates¹ of RFIs Loans to Agricultural Production Sub-system (APS)

RFIs		Yea	ırs	-

- (2) Politicisation and over-bureaucratisation, and
- (3) Low resource efficiency.

These problems have led to low viability of RFIs. Indeed, the earlier findings on scale economies precisely suggest this. Even the first two problems imply that these institutions have low efficiency. All the three problems are the symptoms of the causes underlying high loan delinquency.

Loan delinquencies are associated with factors that are both internal and external to RFIs. Recent loan waiver scheme of the GOI culminated into cumulative indiscipline of borrowers that got induced from earlier such schemes of some of the state governments. This has even led to lenders indiscipline. But recently NABARD rightly discontinued its credit line to some of the state governments that announced loan and interest waivers. This probably emerged from a recent consensus on undesirability of such waivers for RFIs. Indeed, we recommend a moratorium on loan and interest waivers. This would be easier to achieve if RFIs overcome their deficiencies.

Their deficiencies are of two types. One of these is that they rarely make use of well defined policy of rescheduling loans when delinquency is associated with drought, floods and such other natural calamities. They also infrequently charge penal interest rate to delinquent borrowers. Another deficiency relates to their inadequacies in borrower selection, making adequate and timely loans including for working capital purpose and providing and/or organising technical services and backward and forward linkages especially for complementary inputs. We contend that much of these inadequacies can be overcome by implementing the recommendations discussed in the preceding sections. Before we conclude we make three observations that are germane to the healthy growth of RFIs.

One, these institutions should continuously strive for credit dispensation that embodies new technology. This is because loan delinquencies are significantly lower for crop loans and in areas with rapid and broad based technological change as in northern and southern India (see Table 6). Two, recently RRBs which have been rightly permitted to make 60 per cent of their new loans to the non-poor would enable them to make loans at higher interest rates that was totally prohibited to them. This would facilitate these banks to strike better balance between their commercial and social objectives. But this share of loan portfolio for the non-poor should be gradually and in phases be reduced to 40 per cent to retain their pro-poor orientation. Similarly, these banks should be completely autonomous from their sponsor NCBs over a period of

3 to 5 years to grow on their own and to be truly gramin banks. And three, once those PACS show consistently better performance in loan recovery, profitability and multipurpose operations, DCCBs may amalgamate their branches with these PACS to create their rural co-operative banks. These banks should undertake financial operations and the PACS merged with them should function as their branches, input depots, and consumer goods stores serving the same villages they served before. Those depositors of the erstwhile branches of DCCBs who are not members and equity holders should be requested to become so on same terms and conditions which are applied to the members of the merged PACS. These types of banks may draw relevant lessons from the successful Farmers Service Co-operative Banks in Kerala [see Desai and Namboodiri 1993, 1995a]. Such banks may be even created from those PACS and branches of DCCBs which have already shown sound performance.

CONCLUDING OBSERVATIONS

Rural financial institutions have been developed as an institutional change to wean away farmers from moneylenders and to spur unconventional integration of huge rural financial market with the rest of the economy. This has been done over decades through appropriate changes in price and non-price policies. These have resulted in some significant accomplishments related to their both financial and developmental objectives. They must be capitalised further to accelerate RFIs achievements.

Among the various reasons that may have prompted different restructuring proposals, the reason of improving financial viability of RFIs is most convincing. But these proposals seem to merely tinker with their macro structure to create monolithic institutions and/or deal with problems by fragmenting them rather than synthesisation inherent in financial intermediation for agricultural development. Indeed, present concerns of non-viability are based on an inappropriate approach to understanding and assessing viability. They are also based on misconceived perception of this viability.

More appropriate approach of studying scale and scope economies in various costs reveals that all four RFIs can improve viability by accelerating their resource productivities. Appropriate macro and micro non-interest rate policies are the cornerstone of RFIs restructuring proposed by us. They emphasise harmonious development of their financial resources, and human capital for generating high quality loan and non-loan assets for land and labour augmenting new technologies for agricultural development. Neither the upward revision in lending rates nor their deregulation nor the restructuring of the type considered is warranted.

What is proposed has underneath a past leadership role of RBI/NABARD in determining interest rates for rural credit. It has also underneath a mission of decentralised institutional development related financial and organisational innovations. Its vision is diversified, multiple and joint-products oriented rural banking, that is autonomous but accountable. And it has a potential to

make RFIs more viable and agricultural and rural growth-oriented.

Any policy analysis of RFIs for their restructuring must be concerned but not panic-driven, constructively critical but not misperceived, ambitious but not euphoric, visionary but not utopian, and objective without being influenced by extraneous opinions. We submit this is what we have attempted.

Annex 1: Definition of Scale Economies and Its Graphical Presentation

Scale economies is defined as proportionate change in one variable say cost (C) in response to proportionate change in another variable say output (Q). In other words, it is an elasticity of C with respect to O, i e,

$$\frac{dC}{C} / \frac{dQ}{Q}$$
, i e,

$$\frac{dC}{dQ} / \frac{C}{Q}$$
, in other words, it is

Marginal Cost (MC) / Average Cost (AC)

When this elasticity is less than 1 it suggests prevalence of scale economies. But if this elasticity is 1, it represents constant returns to scale, while if it is greater than 1 it suggests scale diseconomies. When this scale economy parameter (SP) is less than 1, average cost is declining. And when it is greater than 1 average cost is increasing, while if it is equal to 1 average cost is constant. This is evident from Figure 2.

Schedule 17: Notes Forming Part of the Accounts for the Year Ended 31st March, 1996

1. Principal Accounting Policies:

A. Accounting Conventions:

These accounts have been prepared according to the historical cost convention and in accordance with statutory requirements prescribed under the Banking Regulations. Act, 1949 and practices prevailing in the country.

B. Transactions Involving Foreign Exchange:

- 1. Foreign currency assets and liabilities are translated on the Balance Sheet date at the rates notified by FEDAI, except Foreign Currency Non-Resident Account balances (A) scheme which are valued at the relevant rates specified by the Reserve Bank of India.
- 2. Contingent liabilities on account of outstanding foreign exchange contracts translated have been reported at the contracted rates.
- 3. Profit and Loss on revaluation of outstanding foreign exchange contracts translated on the Balance Sheet date at the rates notified by FEDAI have been included in the Profit and Loss Account.

C. Investments:

In accordance with the guidelines issued by Reserve Bank of India, the investments of the Bank are classified into "Permanent Investments" - which are intended to be held up to the date of maturity and "Current Investments" - which are not intended to be held up to the date of maturity and are generally intended to be traded in. Permanent Investments are valued at cost unless it is more than the face value, in which ease the premium is amortised over the period remaining for the maturity of the security. Profit (net of tax) on sale or redemption of Permanent Investments is transferred to Capital Reserve whereas loss on sale or redemption of Permanent Investment is charged to revenue. In respect of Current

(Incorporated in Germany with Limited Liability)

Investments other than Treasury Bills and Commercial Paper the same are valued at cost or market value which ever is lower, the depreciation if any on revaluation is charged to revenue. In case of inter change of investments from current to permanent, prior authorisation of the Local Advisory Board is obtained and depreciation if any resulting from valuation based on lower of market value or cost is fully provided for Treasury bills and commercial papers have been valued at carrying cost

The market value of Current Investments is worked out by means of appropriate capitalisation of yield method as recommended by the Reserve Bank of India

D Advances

- 1 Provision for doubtful advances The Management reviews the advances portfolio each year in addition to periodic reviews and based on their judgement sets aside specific provision for doubtful advances. The provisions made duly consider the provisioning norms instructed by Reserve Bank of India The provision for doubtful advances is made to the satisfaction of the auditors after considering present value of realisable security held by the Bank in respect of such advances
- 2 Advances are stated not of bills of exchange rediscounted and specific provision in respect of doubtful debts
- E Premises, Furniture and Fixtures, etc.

Premises Furniture and Fixtures including vehicles and equipment have been valued at cost less depreciation. Depreciation has been provided on straight line method at the rates specified by Head Office which are higher than the rates prescribed under Schedule XIV to the Companies Act, 1956 Lease Premia is being amortised over the lease period expected to be extended. Depreciation is provided from the year in which the asset is put to use. Depreciation on building is provided from the day it is put to use and in case of other assets pro rata depreciation on addition is provided as per Head Office guidelines in the year it is put to use. No depreciation is provided in the year of sale

Income Recognition

- i) Interest Income is recognised on accrual basis and in the case of non-performing advances the same is recognised on recovery and settlement
- 11) Commission and fees are treated on accrual basis except commission on Letters of Credit and Guarantees which is accounted as income on cash basis
- G Staff Benefits

Liabilities in respect of retiral benefits to employees are provided for by payment to duly recognised Gratuity Fund Pension Fund and Provident Fund and are determined on the basis of actuarial valuation

H Net Profit

The new profit disclosed in the profit and loss account is after

- 1) Provision for taxes on income in accordance with statutory requirements
- ii) Prevision for doubtful advances
- iii) Adjustments so as to value trade investments at lower of cost and market value
- iv) Other usual and necessary provisions

2 Lease Premium Amortisation

The Bank has two prenuses (including one acquired during the year 1994 95) on land leased from Bombay Municipal Corporation. Based on legal opinion and correspondence with the State Government regarding the general policy of renewal of such lease, the Management is of the opinion that the lease would normally be extended. Hence the sum of Rs. 420 033,561 paid to acquire the lease rights has been amortised on the basis of the lease period expected to be extended instead of residual contracted lease period. Consequently, a sum of Rs. 11,510,485 has been amortised during the year. If the amount had been amortised based on residual contracted lease period the charge to the Profit and Loss Account for the year. would have been Rs 64 955 640 and profit for the year lower by Rs 53 445 155

3 Head Office Reserve Account

Head Office Reserve Account represents funds remutted by Head Office and a portion of approved remutable surplus for an earlier year retained by the Bank, to meet the cost of acquisition of residential and Bank premises at Mumbai and to meet capital adequacy norms as per the Reserve Bank of India's guidelines

4 Capital Adequacy Ratio

The Capital Adequacy Ratio of the Bank as at March 31 1996 as computed under guidelines of the Reserve Bank of India vide Circular ref DBOD No BP BC 117/21 01 002 92 dated 22 04 92 and as amended subsequently is 8 49%

Regrouping

The previous year a figures have been regrouped/rearranged wherever necessary

Auditors' Report on the Accounts of the Indian Branches of Deutsche Bank AG

We have audited the attached Balance Sheet of the Indian Branches of Deutsche Bank AG (Incorporated in Germany with limited liability), as at March 31, 1996 and the Profit and Loss Account of the Indian Branches of the Bank for the year ended March 31, 1996 annexed hereto

In accordance with the provisions of Section 29 of the Banking Regulation Act, 1949, read with the provisions of subsections (1), (2) and (5) of Section 211 and sub-section (5) of Section 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account together with the notes thereon are not required to be drawn up in accordance with Schedule VI of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms 'A' and 'B' of the Third Schedule of the Banking Regulation Act, 1949.

We report that

Profit and Loss on revaluation of outstanding foreign exchange contracts at the rates specified by FEDAI on the Balance Sheet date have been included in the Profit and Loss Account, as per Accounting Policy 1 B of Schedule 17. This Policy is in accordance with FEDAI guidelines approved by Reserve Bank of India and reiterated vide its circular dated June 5, 1996. However the same is not in accordance with the Accounting Standard 11 of the Institute of Chartered Accountants of India, impact of which is not ascertained.

Subject to the above

- 1 We have obtained all the information and explanations which in our opinion and to the best of our knowledge and belief, were necessary for the purpose of audit and have found them to be satisfactory,
- 2 the transactions which have come to our notice have been, in our opinion, within the powers of the Indian Branches of the Bank,
- 3 in our opinion, proper books of accounts as required by law have been kept by the Indian Branches of the Bank so far as appears from our examination of those books
- 4 in our opinion, and to the best of our information and according to the explanations given to us the accounts read together with the notes thereon, give the information required by the Companies Act, 1956 in the manner so required for the Banking Companies and on such basis, the Balance Sheet give a tree and fair view of the state of affairs of the Indian Branches of the Bank as on March 31, 1996 and the Profit and Loss Account of the profit of the Indian Branches of the Bank for the year ended on that date

Social Security for Workers in Unorganised Sector

Experience of Kerala

S Mohanan Pillai

In recent years the Kerala government has initiated several measures to provide social security to workers in a wide range of activities in the unorganised sector. Welfare funds have been created and are administered by tripartite statutory welfare boards. This article examines the functioning of one of the oldest fund schemes, the Kerala Headload Workers Welfare Scheme.

I Introduction

SOCIAL security schemes are intended to provide a minimum living to people unable to earn due to invalidity, unemployment and old age. These measures serve as effective tools to alleviate poverty and destitution. However, many social security schemes whether in the advanced economics or in the third world countries, are mainly meant for employees in the formal (organised) sector. Workers in the informal (unorganised) sector, on the other hand, are deprived of such benefits. In the backward economies, the formal sector constitutes only a small segment of the working population while the majority belong to the unorganised sector. Workers in the unorganised sector, more particularly the casual workers are, however, more likely to be poor and destitute due to the irregular nature of employment and unsustainable income. In such a situation, protective social security to a minority in the formal sector, would not only widen but also reinforce inequalities [Midgley 1984] Further, in the backward economies, the much trumpeted 'trickle down' argument seems to have limited relevance due to the existence of wide inequality in the distribution of income and wealth. Experience has also shown that growth alone is insufficient to eradicate poverty, and that it must be accompanied by equitable distribution of income and wealth through state intervention. This being the case, as widely advocated, the extension of formal social security to the weaker section of the society could serve as a suitable alternative measure of poverty alleviation in the backward economics [see Ahmad et al (ed), 1991]. This study of social security measures for the unorganised sector is set against this backdrop.

The 'unorganised' sector, in the context of a labour surplus developing country, refers to the traditional segments either in the rural or urban sectors of the economy. In the rural sector, the unorganised sector workforce mainly comprises landless labourers, small and marginal farmers, share croppers, rural artisans, forest labourers and fishermen, while in the urban sector it consist of manual labourers like construction workers, head-load workers, wage

labourers employed in manufacturing, trade, transport, communication, service and self-employed like street vendors, hawkers, etc. Definitional problems arising largely from the amorphous character of the activities of this sector and statistical inadequacy, however, make it difficult to capture a macro picture of the labour force. Nevertheless, the available statistics indicate that the unorganised sector contributes more than 64 per cent to the national income in terms of value added [CSO 1992]. The major part of the labour force in the unorganised sector is engaged in the primary sector followed by services and secondary sectors.

The need for social security for the unorganised sector is justified essentially on grounds of equity and social justice. As research studies have shown, the unorganised sector is characterised by irregular employment, unstable income, prevalence of piece wage rates and absence of any legal protection in regard to income, employment and health and safety measures.2 As observed in the Draft Seventh Plan, in the absence of any legal protection like Contract Labour (Regulation and Abolition) Act (1970); Minimum Wages Act (1948) and Inter-State Migrant Workmen (Regulation of Employment and Conditions of Service) Act (1979), workers in the unorganised sector suffer large scale exploitation in terms of hours of work as well as wages. A majority of the casual workers in this sector receive wages below the legal minimum living always at a subsistence level.' Further, since the casual workers in the unorganised sector are illiterate and relatively less skilled, there is hardly any scope for them to achieve 'vertical mobility' on the occupational ladder [Doeringer and Poire 1980].

The introduction of formal social security for the masses in the unorganised sector is, however, constrained by many a factors like irregularity of employment and income, absence of a permanent employee-employer relationship and above all, the poor resource base of the backward economies. It is in this respect that the experience of Kerala is worth studying. In recent years, the Kerala government has initiated some measures to provide social security to workers in a wide range of activities in the unorganised sector. The task is accomplished by constituting

welfare funds which are administered by the tripartite statutory welfare boards. This study is an empirical verification of the effectiveness of these welfare fund schemes in providing social security to the casual workers in the unorganised sector through a case study of one of the oldest welfare fund schemes, namely, the Kerala Headload Workers Welfare Scheme.

In Kerala the basic development issue is that although the state stands as a model to other developing regions in the matter of social advancement, a sizeable population, particularly those in the unorganised sector, lack access to the fruits of the development process, the typical developmental problem faced by backward economies. Because of their poor economic conditions, the real benefits of government expenditure on education and medical care inevitably bypass the very poor.4 However, in the Kerala context, though these workers in the unorganised sector are economically quite weak, they are politically well organised and are also aware of their rights. Their political consciousness amidst economic deprivation often leads to social tensions through an articulation of their demands. The economic and social protection to weaker sections became inevitable not only from the point of equity and economic justice but also as a political compulsion. This may perhaps be the reason that successive governments in Kerala have formulated various schemes of social security and welfare measures for the unorganised workforce. The welfare fund schemes introduced for the workers in the unorganised sector are the latest addition to the list of social welfare measures in the state.

II Headload Labour Market

The headload labour market is a manifestation of the dual labour market set up of a backward economy. As defined by the Kerala Headload Workers Act (1978), a headload worker is a

person engaged directly or through a contractor in or for an establishment, whether for wages or not, for loading or unloading or carrying on head or person or a trolley any article or articles into or from a vehicle or any place in such establishment and includes any person not employed by any employer or contractor but engaged in the loading or unloading or carrying on head or person or in a trolley any article or articles for wages

Nevertheless, a large number of the workers are self-employed either in rural or in the urban market centres. Because of the casual nature of employment, these workers very often do not have a permanent employer.

The growth of headload workers in Kerala was very rapid Though there is no clear statistical evidence, earlier studies indicate that the 1960s and 1970s witnessed a phenomenal increase in that numbers [Vijay Sankar 1984 and Vijay Kumar 1984] The secular stagnation in the agricultural sector and the resultant large-scale displacement of rural labour and chronic unemployment and underemployment have triggered the growth of headload labour force in the state. Added to this the rapid growth of tertiary sector especially trade and commercial activities and the fast spread of urbanisation provided more avenues for this sort of unskilled employment. According to an estimate by the Headload Workers Welfare Board, the total number of headload workers in the state cories to over two lakhs. They are classified into attached, 'unattached and scattered workers. The attached workers are those who are regularly and permanently engaged by an employer exclusively for his establishment. The workers who are employed by more than one employer are classified as unattached workers. The scattered groups are those who are primarily self employed at bus stations, village centres and in the forest areas. Among these groups, majority of the workers belong to the scattered category (70 percent) followed by unattached (25 per cent) and the attached are insignificant (5 per cent)

SOCIAL AND ECONOMIC CHARACTERISTICS

I iterature on the socio-economic profile of headload labour workers is scanty except a few micro level studies. As part of our empirical study, we conducted a sample survey on a selected number of headload workers who come under the welfare scheme The sample selected was the Ernakulam urban centre which is the second centre to introduce the headload workers welfare scheme in the state as far back as 1984. At the time of the study, about 782 workers were covered under the scheme in this centre which is about 17 per cent of the total workers covered under the scheme throughout the state For our study, 10 per cent (78 workers) of the workers were selected The socio-economic profile captured by the survey is summarised in the tollowing paragraphs

At the outset, it may be noted that before the introduction of the scheme, these workers were clustered into different groups in and around the market centre depending upon the nature and type of commodities handled Even after the formation of the scheme the segmentation of labour market continues although in a formalised way Now these segments are called pools. Among the workers, the most dominant is the attimari group who are doing only loading and unloading goods from and into motor vehicles. The other categories are those handling stationery goods, hardwares truits, vegetables, and workers engaged at godowns and railway goods sheds. We have selected workers from each pool so as to give adequate representation to different categories of workers

The survey revealed that headload workers are basically a migrant labour force. The migration of these workers is primarily from rural to urban centres influenced by pull as well as push' factors [Tisdel and Alauddin 1992] A good number of workers had left their places of birth long back in their childhood and came to the present place of residence in search of employment. Before venturing into headload work they worked as cleaners and tea boys in hotels for a meagre income Some of the workers admitted that they had left their homes after attempting small time thefts in their native places. This explains the socio economic background from which they entered the labour market Although a worker enters the labour market at an early age (the average age of entry into the labour market is 15 years as revealed in the survey) he cannot continue in the field for a long period on health ground

Like any other casual labourer headload workers are also educationally backward. Of the workers surveyed, about 68 per cent had studied either up to primary level or below primary Most of them reported dropping out of primary level school at the because of poverty. However, a striking trend is that of late, there is an inflow of slightly more educated people into this kind of activity 5 Though the inflow of educated people into the headload labour force is largely a manifestation of the level of unemployment prevailing in the state, the relatively better wage rates enjoyed by this segment of the workers among the casual labourers could also be an attraction

The absence of a permanent employeremployee relationship is another characteristic feature of the unorganised sector. The dual labour market theories postulate that casual labourers in the secondary market are susceptible to frequent change of their employers because of the casual nature of employment. Nor does the nature of the work induce the employers to employ the same workers permanently. In the process it is difficult to identify a permanent employer for these workers. The behaviour of the headload labour market was found to be an extreme case of this These workers specifically the unattached segments not merely change employers frequently, but in fact, work for more than one employer even on a single day. In our sample, 75 per cent of the workers reported that they work for two to eight employers per day. The remaining 25 per cent, mainly engaged in loading and unloading of vegetables and fruits stated that on an average they were working for about 10 employers a day

It is a known fact that among the casual wage labourers headload workers earn better wages (Table 1) The strong bargaining strength backed by powerful trade union support appears to be the major contributing factor for such wage differences relative to other unskilled workers. The introduction of the Headload Workers Act, which provides for minimum wages is also another contributing factor. Apart from these institutional factors the ability of the employer to pay higher wages seems to be quite relevant in the case of headload workers, for the employers (mostly merchants and traders) can pass on their burden to the ultimate consumers

The survey also revealed some disquieting dimensions of income and wage earnings characteristics of headload workers. Despite the fact that these workers earn a relatively larger wages among casual workers they are equally vulnerable to frequent fluctuations in employment and income. There exists marked spatial and inter-pool differences in the wage earnings as also wide fluctuations in their daily wages. The variation in the daily wages ranged between 29 per cent and 68 per cent, while the poolwise wage differences were found to be about 49 per

FABLE 1 DAILY WAGES OF URBAN UNSKILLED WORKERS (PRNAKELAM DISTRICT)

Year	Average Duly Wages (Rs)				
	Unskilled Workers (Construction)	He idload Workers			
1985 86	25 83	37.30			
1986 87	29 11	39 37			
1987 88	31 42	17 98			
1988 89	33.90	40.81			

Daily wages of headload workers are worked out from the monthly wage data obtained from the welfare board. The average monthly wage of a worker is divided by the average number of days of employment in a month which comes to about 20 days.

Reflections on Human Nature and the Social Order

NOAM CHOMSKY

In this wide-ranging intelligent tour de force, Noam Chomsky brings together his thoughts on topics ranging from language and human nature, to the Middle East settlement and the role of East Timor in the New World Order. This is the first collection of his essays in recent years to address questions of philosphy, ethics and foreign policy, and he includes his first published remarks on political goals and visions.

This book will be of great interest to both the general reader who is new to Chomsky's work, and the long-time Chomsky fan who will discover new writing on current topics. It includes essays that describe the role of the "cognitive revolution" in linguistics and explore the way scientific questions are asked, answered, and influenced by dominant ways of thinking. Whether he is looking at the relationship of democracy and markets in the New World Order, human rights violations in East Timor, or the intellectual responsibilities of writers, Chomsky draws links between foreign policy decisions, the state of intellectual culture, the role of the media, and the potential for free and democratic societies to understand and counter the heinous acts being committed in their name. He reveals how the 'new' world is remarketing the old disorder.

This book is simultaneously released throughout the world in 1996.In India. Madhyam Books will be publishing other books written by Noam Chomsky.

PLANNING AND ECONOMIC **POLICY IN INDIA**

Evaluation and Lessons for the Future Editors: MANABENDU CHATTOPADHYAY. PRADIP MAITI and MIHIR RAKSHIT

This volume provides a comprehensive and critical appraisal of the planning process and economic policies followed by India till 1991. The essays provide explanations and critiques

of India's planning strategies and explore major aspects of India's economic performance. Going beyond mere introspection about the past, the distinguished contributors make explicit policy recommendations in the context of the economic reforms initiated in 1991.

220 pages • Rs 275 (cloth) • Rs 175 (paper) • 1996

Transcending the dualities of substance and RETHINKING ECONOMICS form, and theory and practice, this major book identifies the substantial essentials of the economy and provides insights into the kind of changes required in economic theory in order to make it more responsive to real-life economic problems. This invaluable book is supported by empirical description and the personal experience of one of India's distinguished economists.

272 pages • Rs 335 (cloth) • Rs 195 (paper) • 1996

Reflections Based on a Study of the Indian Economy **C T KURIEN**

cent (see Graphs 1 and 2) The number of workers in a pool number of days of employment and the type of goods handled are found to be some of the principal factors influencing frequent fluctuation in the wages. Apart from such distortions in employment and income, these workers cannot continue for a long time in the field because of health risks. Thus, the workers lead an insecure life and are susceptible to deprivation and poverty once they are out of the workforce. This justifies the need for a minimum level of social security for these workers.

III Kerala Headload Workers Welfare Scheme

The first Welfare Fund Scheme introduced in Keiala was for toddy workers in 1969 Thereafter in 1975 a general welfare fund scheme was constituted in the state, namely the Kerala Labour Weltare Fund Scheme (KLWF) The low paid government employees self employed workers like artisans skilled and unskilled rural workers etc are the members of the scheme However. during the 1980s and in the beginning of the 1990s a number of welfare fund schemes were set up in the state exclusively for the unorganised workers like toddy workers he idload workers motor transport workers. coir workers cashew workers handloom workers khadi workers construction workers abkarı workers and agricultural workers (see Tables 2 and 3) The sample welfare fund scheme considered for our study viz the Kerala Headload Workers Weltare Scheme was launched in 1984

The legislative basis for the introduction of social security for head load workers in Kerala is the Kerala Headload Workers Act 1978 (hereafter the act). The twin objectives of the act are regulation of employment of headload workers and making provision for social security for the workers. Section 13 of the act empowers the government to formulate suitable schemes for the welfare of the workers and constitution of fund(s) including provident fund. Accordingly the government formulated the Kerala Headload Workers (Regulation of Employment and Welfare) Scheme 1983 (hereafter the scheme) with the intention of regulating the employment and providing welfare to those unattached headload workers who do not work under any permanent employer The scheme is applicable to all establishments specified in the schedules appended to the act but exclude those establishments owned or controlled by the central government

Presently, the coverage of the scheme is limited to those workers attending to shops and establishments in major market centres, godowns, and railway goods sheds. At the same time, the workers engaged in loading and unloading of goods in bus stations,

railway stations and self-employed headload workers in rural areas do not come under the purview of either the regulatory mechanism or the welfare measures of the scheme At the time of the study, the scheme was implemented in 12 centres with a coverage of 7852 headload workers constituting nearly 4 per cent of the total registered headload workers (183 lakh) in the state

The state level institutional agency to implement the scheme is the Kerala Headload Workers Welfare Board (hereafter the Board) constituted in 1984 under Section 14 of the Act The Board is a 15 member tripartite corporate body with equal representation of five members each from the government employers and headload workers. The workers are represented by their respective trade unions. The implementation of the scheme is quite decentralised. The institutional set up to implement the scheme in a particular area is the local committee (LC), constituted under section 18 of the act Like the welfare board a local committee is also a corporate body consisting of fifteen members, five each from the government

employers and the workers. The committee however, comes under the overall control and supervision of the Board. The local committee is the primary functionary in the implementation of various provisions stipulated in the scheme, such as registration of headload workers, and employers execution of various provisions intended to regulate the employment of the workers and implementation of labour welfare and social security schemes.

WORKING OF SCHEME

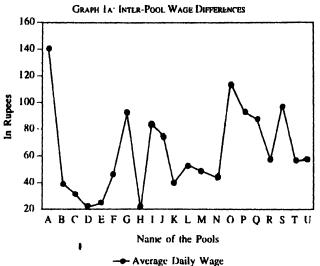

(A) Regulation of Employment

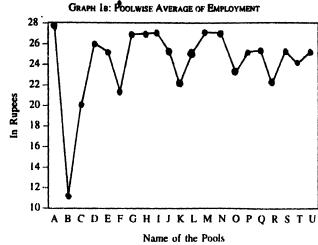

The mechanism by which the Board enters the labour market is through regulation of employment of the workers. This task assumes paramount importance because it helps in improving the working conditions of the workers as well as facilitates the execution of work and settlement of labour disputes more effectively. In this regard, the act has various provisions viz hours of work limitation of employment daily intervals for rest provisions for fixing and notifying minimum wage rates for different

Days of Employment

establishments and kinds of work, enforcement of wages and amount of levy both by workers and employers towards the welfare fund, etc.

The first step in the direction of regulation of employment is the registration of workers and employers." Once an area is notified for implementation of the scheme, the primary function of a local committee is to register and enroll workers and employers. For the worker, getting his name enrolled with the local committee becomes necessary because once an area is brought under the scheme, no unregistered worker is allowed to work in that particular area. Similarly, an employer who regularly requires the services of headload workers has to get his name registered with the committee. The workers enrolled with a local committee are divided into various groups and are deployed at different places as decided by the committee. The grouping of workers into different categories in accordance with the nature of their work and/or area of operation is called pooling of workers. Although the pooling and deployment of workers are essentially the functions of local committees, in actual practice, the trade union (especially the powerful in the centre) seems to play a major role in these matters. Once a worker is placed in a particular pool, he is prohibited from moving to another pool.

The regulation of employment works in the following manner. The registered employer regularly requiring the services of headload workers from time to time has to inform the local committee regarding the number of workers needed by him. The employer is also required to deposit with the committee an advance amount approximately equivalent to the wages payable by him to the headload workers for a week. This amount is credited to the employer's account maintained by the committee. The committee allots the workers required by the employer for a day. As soon as the work for the day

is over, the employer has to furnish to the committee a statement, namely, work-card, containing details such as pool name, number of workers who attended, quantum of work done and amount of wages. On receipt of the work card, the committee assesses the amount of wages and the employer's levy to be adjusted against the amount already deposited by the employer. The balance is adjusted for the subsequent days. Similarly, the committee also works out the worker's wages and levy amount. The method of wage calculation is that the total wages earned by the workers of a particular pool in a day is equally divided among the number of workers present on that particular day and each worker gets an average amount of wages. The daily wages so collected are credited to the account of the worker maintained by the committee and the same will be paid to him within seven days of every month, after deducting 10 per cent levy as worker's contribution. The worker is also being paid advance wages on a fortnightly basis which will be adjusted against the monthly wages earned by him.

The significant outcome of the process of, regulation of employment is the creation of a permanent employer for the unattached headload workers. In an area where the scheme is introduced, the local committee acts as the *de jure* employer although the merchants and traders who actually make use of the service of the workers are the de facto employers. In other words, once the workers are brought under the scheme, in all practical purposes, the local committee (and ultimately the Board) is their employer. The local committee allocates the work, pays wages and looks after worker's welfaire

TABLE 3 SOCIAL SECURITY SCHEMES FORMULATED UNDER DIFFERENT WELFARE FUND SCHEMES IN KERALA

Name of the Scheme	Eligibility/Level of Assistance
Pension	60 years and above,
	Three years service and membership to the Fund
Gratuity	@ 50 per cent of the average wage for a maximum period of 20 months
Provident Fund	Net credit to the account of the worker and paid on superannuation, incapacity to work, migration to other state and termination.
Medical Assistance	Non-refundable advance from the Fund for the treatment of the worker and family members. Three months membership to the Fund
Educational Assistance	Non-refundable advance from the Fund for the childrenOs education.
Marriage Assistance	Non-refundable advance from the Fund for the marriage of daughters
Ex-gratia	Disability or death of the worker.
Housing Adva ce	For construction or purchase of house or land meant for building purposes Advance is given to the worker from the Fund not exceeding 12 months wages and minimum of three months membership to the Fund
Unemployment benefits	Worker is eligible for non-refundable advance from the Fund for continuous unemployment for 30 days
Retiral benefits other than PF, gratuity and Pension	Wherever there is no provision of PF or gratuity, the net balance in the credit of the worker in the Fund together with a share by the Board is given to the worker at the time of superannuation.

Source Compiled from the various Welfare Fund Acts/Schemes

This employer-worker relationship thus creates the necessary condition for the implementation of suitable welfare and social security schemes for the headload workers who, like any other constituents of the unorganised sector labour force, remained virtually out of any sort of labour welfare schemes till the formation of the scheme.

(B) Labour Welfare and Social Security Schemes

The welfare measures introduced under the scheme can be broadly divided into nonwage financial assistance and social security measures. The non-wage benefits include bonus, holiday wages, and advances like festival advance, school advance and marriage loan. The amount of assistance, however, varies from time to time. For our empirical study, we have taken 1990-91 as the reference period. During this period, the Board fixed the bonus at 11 per cent of the annual wages of a worker and seven days holiday wages at the rate of Rs 30 per day. The eligibility criterion is that the worker should have worked at least 30 days during a continuous period of three months for availing these facilities. The workers normally get festival advance and school advances which they are required to repay in equal instalments. These advance payments provide the worker with some liquidity during the time of necessity and in the absence of which he used to meet by borrowing from money lenders before the scheme came into being.

The social security measures formulated under the scheme include retiral benefits, invalidity pension, ex-gratia payments, medical benefits, educational allowance and marriage allowance. Table 4 sets out various social security and labour welfare measures currently implemented by the Board. For the purpose of providing these social security measures, two types of welfare funds have been created, namely, the Terminal Benefit Fund (TBF) and the General Welfare Fund (GWF). The TBF created with the levy contribution from workers at the rate of 10 per cent of their daily wages, will be paid back to the workers as a lump sum amount as retiral benefit at the time of retirement or termination from the work. The GWF, on the other hand, is constituted out of the contribution from workers, committees and the Board at equal rate of Rs 10 per month. The principal welfare schemes financed from GWF are: (a) family welfare scheme; (b) scholarship scheme for the children, (c) hospitalisation insurance scheme; and (d) group insurance scheme. Under the existing medical scheme, namely, Hospitalisation Insurance Scheme (HIS), the worker is eligible for reimbursement of medical bills up to Rs 2,000 a year. The worker, his spouse, children below the age of 18 and aged parents are eligible under the scheme. The worker is eligible for hospitalisation assistance only for in-patient treatment beyond two days in a registered/recognised hospital. The Board gives educational allowances and scholarships to eligible children of the workers and the amount is restricted to Rs 100 for an academic year, irrespective of the number of children he has. The educational scholarship is given to those children above tifth standard and the amounts vary from Rs 100 to Rs 2,000.

(C) Financing of the Scheme

The source of funds for financing various provisions under the scheme is the levies imposed on the workers (10 per cent of the wages) and on the employers (25 per cent of the worker's wage). There is, however, no contribution from the state government for meeting the expenses. Since the 10 per cent levy collected from the worker goes directly to the Terminal Benefit Fund, the employers' levy constitutes the major portion of the resources for financing the scheme. There is however, a devolution of resources between the local committees and the Board (see Chart). Of the 25 per cent levy on employers collected by the local committee, a portion goes to the welfare board as the latter's income for meeting administrative and other establishment expenses. The quantum of resource flow from the committee to the Board are: (a) 2 per cent of the annual wages of the workers; (b) Re 1 per worker per month, and (c) the committee's contribution towards the General Welfare Fund at the rate of Rs 10 per worker per month. The net income is the resources available with the committee to meet the welfare as well as administrative expenditures at the committee's level. The Board's income consists of the amount transferred from the committees plus workers' contribution towards General Welfare Fund at the rate of Rs 10 per month.

administration. In this regard, the act

stipulates that a portion of levy collection

can be utilised for meeting the administrative

and establishment expenditures of both the

Board and local committees. There is,

however, a steady rise in the administrative

expenditure of the scheme. The annual

growth in levy collection on an average was

from Rs 1.43 crore in 1987-88 to Rs 2.03

crore in 1990-91. Simultaneously, the

administrative expenditure as a proportion

of levy collection moved up from 15 per cent

to 33 per cent during the same period. The

rising trend in administrative expenditure is

attributed to the peculiar nature of the scheme

functioning in the state, the Headload

Workers Board, besides engaging in many

welfare measures, has to play a major role

in the regulation of employment. This

requires an elaborate administrative machinery. The Board is, therefore, constrained to divert a sizeable portion of levy collection

to meet the growing administrative expenditure which otherwise could have been utilised for more welfare measures.

carning as well as number of days of employment of the workers. Nevertheless, the benefits under other welfare measures like medical, educational, family welfare, invalidity benefits are found to be scale neutral. In other words, the workers with lower wages are also equally benefited unlike in the case of bonus. festival allowance, etc, where the level of benefits are directly proportional to the wages earned by the workers.

IV Economic Impact of Scheme

The increasing cost of social security and its adverse impact on budgetary position have, of late, led to a rethinking on the need for a structural reorientation of social security measures in the Western advanced economies where a significant portion of the national income is devoted to social security. This has also drawn the attention of social

scientists who have ventured into theoretical as well as empirical work on the economic impact of social security schemes. The factor supply and redistributive effects of income transfer programmes have been the major. areas of intense empirical research. The theoretical framework within which many of the studies have been attempted is the standard life-cycle model. Various empirical works within the life-cycle frameworl subscribe to the argument that social security, because of its specific characteristics, has contributed to poor economic performance by reducing both labour supply and saving [see Aaron 1982]. These theoretical works, essentially pertain to organised sector labour force, and have limited relevance in the context of the unorganised sector. Nevertheless, they provide us with a framework to study the economic impact of the Headload Workers Welfare Scheme In

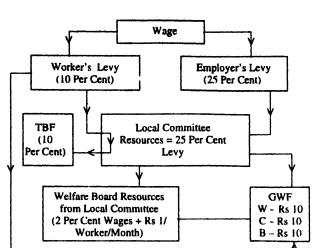

CHART RESOURCES FLOW

TBF-Terminal Benefit Fund; GWF-General Welfare Fund; W-Workers' contribution; C-Committee's contribution; and B-Board's contribution.

The pattern of welfare expenditure revealed that bonus and holiday wages account for almost 85 per cent of the aggregate welfare expenditure, while the share of other welfare schemes, most of which are administered directly by the Board, is very low (Table 5). The benefits from bonus and holiday wages are basically linked to the workers' days of employment and wages. As a result, the workers who get more days of employment and earn higher wages are likely to be the major beneficiaries.

Our field study revealed that the majority of the workers are benefited from the welfare measures extended under the scheme despite the fact that the non-wage benefits especially bonus and holiday wages are found to be inequitable as they are linked to the current

the case of headload workers before the introduction of the scheme, they remained totally unprotected against the uncertainties of employment and income. One could, therefore, expect an entirely different behavioural response from this category of casual workers once they have been brought under social security. The scheme ensures some sort of job security and income redistribution. The enquiry into the economic impact of the scheme attempted in this study is mainly centred around the employment effects, income and redistributive effects and saving effects of the scheme against the setting of the labour market behaviour of casual workers.

EMPLOYMENT EFFECTS

Studies which have gone into the employment effect of job security measures revealed that, in the event of the implementation of job security legislation, an employer is bound to incur additional 'adjustment cost' [Fallon and Lucas 1991]. A higher adjustment cost may, in turn, induce an employer to shift from labour-intensive to more capital-intensive production technique. Another possibility is that job legislation would raise the cost per employee which may lead to the expansion of working hours of the existing employees and fewer new recruitments. The ultimate impact is reduced demand for labour.

The regulation of employment of headload workers envisaged in the scheme, inter alia, renders some sort of job guarantee to the worker. The obligations on the part of the employer, such as compulsory use of registered workers, strict adherence to payment of wages as stipulated under the scheme and payment of levy would place additional adjustment cost and, therefore, are likely to affect the demand for labour. Our field study attempted to capture such possible employment effects. Of the 78 workers surveyed, 32 per cent replied that there was not any marked change in employment after the introduction of the scheme, while 40 per cent replied decrease in employment and another 28 per cent reported increase in employment. Those who reported falling employment attributed it to the following reasons. Firstly, in some areas more workers have been deployed during the formation of different pools resulting in a fall in the per capita availability of work. Secondly, consequent upon the introduction of the scheme, the employers began to reduce their dependency on unattached workers and more on attached workers who are on the regular pay rolls of the establishments. Thirdly, some employers have shifted their operations from scheme areas to non-scheme areas in order to evade the payment of levy. Among these, the third factor may have the larger impact on employment for the workers under the scheme. However, the shifting of loading and unloading activities from scheme areas to non-scheme areas has another interesting dimension. It may be noted that the headload work in and around trade and commercial centres has all along been the monopoly of a group of workers in the urban centres and there is total restriction of entry to workers from other centres. In this context, the shifting of their activities by the employers to distant places outside the scheme areas especially to suburban centres provides opportunities to the workers in such areas to share a portion of the work previously monopolised by the urban headload workers. In effect, the scheme has, to a small extent, contributed to a kind of 'diffusion of employment' from the earlier concentration in the urban centres. Thus, while the situation in which employers depend more on attached workers and shifting of activities to non-scheme areas cause some reallocation of work between workers within and outside the scheme, its possible effect on the overall demand for workers in the labour market is not very conspicuous.

Regarding labour supply aspect, the standard labour-leisure model states that income transfer programmes would tend to reduce labour supply both from the side of the beneficiaries and the contributors given the budget constraints. These assumptions have limited validity as far the headload workers are concerned for the following reasons. Firstly, at the existing levels of wage earnings and employment, workers' choice would not be governed by any simple trade-off between income and the

irksomeness of work. Secondly, all welfare benefits under the scheme are linked to the contribution by the workers and employers which are determined by the workers participation and level of wages earned by them. Hence, one may not find a backward sloping supply curve in the case of this segment of unorganised sector labour force following the introduction of the welfare scheme. At the same time, it was observed that the workers handling heavy materials entailing hard work frequently remained absent on account of health hazard. However, now the scheme benefits these workers. Once a worker comes under the scheme, even if he remains absent for a few days, his entitlement to employment is unaffected as he has become a regular worker in a pool. The situation was entirely different before the introduction the scheme when if a worker had remained absent for a few days, there was no guarantee that he would get employment once he came back for work. The scheme thus provides the worker with some security in terms of employment.

INCOME AND REDISTRIBUTIVE EFFECTS

Apart from job security, the scheme also ensures some stability in income to the workers. The system of monthly payment of wages by the local committees provides regularity of income and the fortnightly advance wage payments ensure short period liquidity. The workers say that initially they faced difficulties in adjusting to the new environment. Earlier, workers used to spend

whatever they got on working days and remained in virtual poverty on non-working days. Now with the regularity in income, the workers' household consumption pattern is adjusted to a 'permanent' income. The regularity of employment and stability of income also confers social recognition on these workers, who were always pushed down in the social hierarchy not only because of the menial nature of employment but also because of their chequered lifestyle.

The redistribution of income under social security takes place as the incomes of the beneficiaries go up through income transfers by means of social insurance or social assistance. This is attained through 'horizontal redistribution' and 'vertical redistribution' process.10 In the case of Headload Workers Welfare Scheme, there is enough scope for redistribution of income. The Board (local committees) collects levy from the employers and the same is distributed to workers in the form of nonwage financial assistance as well as social security measures. We have made an attempt to measure the incremental income received by the workers through redistribution. The method adopted is by comparing pre-transfer and post-transfer income gains. The pretransfer income is basically the wages whereas the post-transfer income consists of wages and other monetary benefits out of social security schemes. In our estimates, we have found that, on an average, the additional income received per worker comes to about 30 per cent of the annual wages, though there exists wide variation among the workers (Table 6). However, the variation in the receipt of additional income is much less (39 per cent) than the variation in the wage earnings (61 per cent).

The redistribution of income through the scheme is found to be more equitable. The egalitarian implication is, however, more visible in the case of welfare measures like medical assistance, and educational assistance, while it is relatively less in respect of non-wage payments like bonus since these are linked to workers current earnings. The redistribution also achieves some measure of 'Pareto Optimality', while the workers gain in the form of additional income and social security, the employers may be offsetting their economic loss against the gains in industrial peace. Furthermore, once the employer has paid 25 per cent levy, he is not bound by any other obligation like payment of bonus and advances excepting to meet the stipulation of a 15 per cent revision of wages once in two years, for, such things are now within the purview of the Board.

SAVING EFFECT

Theories formulated within the life-cycle framework postulate that income transfer programmes in general tend to cause a fall

in saving. This is because the expected retirement transfers may be perceived as increment to net wealth resulting in increased consumption [Ando and Modigliani 1963]. We have found an entirely different feature in the case of headload workers following the introduction of the scheme. In our analysis, we could notice that there are two types of outgo from the wages of the workers. These are: (a) monthly levy contribution to the Board at the rate of 10 per cent of the wages towards terminal benefit fund and (b) monthly contribution towards general welfare fund at the rate of Rs 10 per month. Since these two types of outgo are not meant for the direct consumption of workers, they can be considered as savings by the workers. Besides these compulsory savings, the workers have LIC policy and 'Chits' (local system of saving with private paries). The survey results showed that a significant portion of the wages earned by the workers are saved either compulsorily in the form of levy or voluntarily like the LIC premium or chits.

On an average, savings which include monthly contributions and LIC premiums come to about 14 per cent of the monthly wages, although there exists marked variation in monthly savings among workers (Table 7).

The study found that since the wages are paid through the banks, the workers have developed a banking habit which is quite incredible as far as casual labourers are concerned.

V Concluding Observations

Experience the world over is that occupation-linked social security measures remain elusive to the majority of workers in the unorganised sector despite the fact that they are among the most deserving in society. This is all the more conspicuous in the case of casual workers who in the absence of any formal social security fall into destitution once they are out of the workforce. This perpetuates poverty among working classes. In the Indian context, some of the state governments have introduced social assistance measures like old age and destitute pensions. But universalisation of social assistance schemes to cover the entire workforce in the unorganised sector is not a feasible proposition due to the poor resource base in the backward economies. This apart, introduction of formal social security for casual worke 3 is also constrained by the peculiar problems of the unorganised sector such as irregularity of employment and income and above all the absence of a permanent employer-employee relationship.

The experience of Kerala in the introduction of social security for the casual workers in the informal sector is, however,

quite unique. During the latter half of the 1980s and early 1990s, the state has introduced a number of social security schemes for different categories of workers in the unorganised sectors by constituting welfare funds through contribution from workers, employers and the government and these funds are administered by tripartite statutory welfare fund boards.

Our enquiry revealed, first of all, that the welfare funds scheme has brought about drastic changes in the living conditions of the workers both socially and economically. As regards headload workers werlfare scheme, despite some inherent drawback of limited coverage (at present the scheme covers only around 4 per cent of the total headload workers engaged in major market centres), it ensures some regularity of employment and income for the workers.

Although some of the welfare measures under the scheme are linked to days of employment and wages carned by workers, the benefits in general are found to be scale neutral. Moreover, the workers also gain incremental income through redistribution. The steady and regular income has also changed the lifestyle of the workers which elevates their status in society.

The regulation of employment of headload workers under the scheme ensures discipline among them as also facilitates a peaceful atmosphere in the workplaces which in the past used to witness sporadic clashes between workers and employers in the loading and unloading of goods and wage settlements leading to severe law and order problems. The scheme warrants a renewed role of trade unions more in the form of welfare activities by supporting the welfare board authorities in the implementation of the scheme.

On the employment front, the scheme has not made any profound negative impact, rather it seems to have resulted in some sort of reallocation of employment between workers within the scheme and outside. This is in the wake of employers preferring attached workers who are on their regular payrolls as also shifting of activities to nonscheme areas to avoid payment of levies.

To sum up, the welfare fund scheme is found to be a new experiment not only in providing social security to the underprivileged segments of the workforce but also in the financing of social security for unorganised sector in a resource constrained economy. In the operation of the scheme, the government acts as a catalyst, while the welfare measures are financed with the levies collected from the employers and workers. As far as workers are concerned, the contribution not only gives them a sense of participation but also enables them to wrest a legitimate claim from their employers. Likewise, contribution from employers facilitates private sector participation in government-sponsored social security. Above all, the welfare fund scheme of financing of social security to the weaker section is relatively superior to other social assistance measures provided by the government because the former is essentially a self-financing mechanism, while the latter draw upon budgetary resources which a resource constrained government cannot afford for long. On this line, welfare fund schemes can also be considered as an alternative social safety net to protect the workers in the unorganised sector. Considering these positive aspects, the Kerala experiments can be a model for other states in their attempt at alleviation of poverty among weaker sections.

Notes

[This article forms part of the author's thesis for an M Phil Degree awarded by Jawaharlal Nehru University The author is thankful to S Nanda Kumar and Mridul Eapen of the Centre for Development Studies, Trivandrum who guided him in the thesis work. Gratitude is also expressed to the officials in the Kerala Headload Workers Welfare Board, state labour department and headload workers at Ernakulam (Kerala) without whose co-operation this study would not have assumed the present form.]

- 1 Planning Commission report (draft Seventh Five-Year Plan, 1978-83) estimated that 91.2 per cent of the all India employment in 1971 was in the unorganised sector. Based on the CSO definition of unorganised sector, Banerjee (1988) estimated the workforce in the unorganised sector at about 90 per cent of the total
- 2 Some of major studies which went into the major issues of urban unorganised sector in the Indian context are. Vijay Joshi and Heather Joshi (1976), T S Papola (1981) and Harold Lubel (1974). N Chandra Mohan (1978 and 1981).
- 3 Going by the calorie criterion as well as per capita expenditure criterion, the casual workers households both in the rural and urban areas constitute the largest part of the poor. Though the literature as well as studies on Indian poverty showed that over the period, the incidence of poverty is on the decline, the latest estimates by Planning Commission for 1987-88 also reveal a more or less equal distribution of poverty between rural (37.6 per cent) and urban (38.9 per cent) areas (see Economic and Political Weekly Research Foundation, EPW, August 21, 1993).
- 4 Public provision of social welfare and social infrastructure facilities entail large subsidies. Most of these subsidies benefit the better off groups who are able to 'capture' these subsidies. [Economic Reforms. Two Years After and The Task Ahead, Discussion Paper, Government of India, Ministry of Finance, Department of Economic Affairs, 1993, p 22].
- 5 Among the workers in the age group of 22 to 30 years, 32 per cent had studied up to primary or below primary, 63 per cent completed middle level (3rd to 9th standard) and 5 per cent even passed the school leaving certificate (i e, SSLC).

- 6 The primary condition that the board insists on before admitting a worker to the scheme is that he should be a 'genuine' headload worker as defined in the act. The second criterion is that he should be a 'registered' worker as stipulated under Rule 26A of the Kerala Headload Workers Rules, 1981.
- 7 For a detailed review of literature on social security and its economic impact, see Danziger, Haveman and Plotnick (1981).
- 8 The instances quoted by the workers are that some of the employers dealing in cigars and electrical goods have already shifted their godowns from Ernakulam market centres to suburban areas like Kalamassery, Alwaye, etc Similarly, the workers said that the wholesale trading of vegetables and plantain, earlier largely concentrated in Ernakulam market centre, is now diverted directly to retail outlets from place of origin by the wholesale traders
- 9 This is different from the textbook treatment of the labour market, see Solow (1990).
- 10 'Horizontal redistribution' is said to occur if social security schemes redistribute resources between different age, gender, regional or other groups. It also includes the transfer of resources from those who are in full employment to those who are unemployed or have already retired, from those who are healthy to those who are ill, and from those who have no children to those who do. A resource flow between different income groups, whether progressive or regressive, is usually described as 'vertical redistribution' [Midgley 1984].

More Politics of Business than Business

P M Mathew

SMALL-SCALE industries sector in India has been very little examined against the background of economic reforms. This is probably for the reason that very few people are really concerned about having a scientific understanding of the problems of this sector from a policy angle. The little literature that has emerged is either purely academic with very little of practical utility or initiated by some retired civil servants. Naturally, the quality of studies in this area is poor and they have very little practical utility from the point of view of developing this sector.

S Nanjundan (EPW, January 27), with his significant background in the area of small industry development, makes an excursion into the current issues of this sector in India in the context of economic reforms. Based on a review of policies and implementation from 1950s through to the present day, he argues that there has been a significant large sector bias in small-scale industries policies in the country. He substantiates this with specific focus on the structure and composition of the recently appointed expert committee to review policies and programmes for the small-scale industries sector. Nanjundan points out that harping on the age-old thrusts like finance, technology, entrepreneurship, regulations, etc, is not likely to be helpful in generating employment opportunities in this sector. The lofty ideals on which the programmes for small industries development started in the mid-1950s degenerated from the mid-1970s. The thrust of promoting viable products and viable output-scales based on intermediate/ appropriate technology got blunted into a scramble by a lobby to share with the licensed monopoly large-scale sector in the allocation of scarce and imported raw materials, equipment and financial resources.

Nanjundan finds the stranglehold of the bureaucracy to be the core of the problem and argues for organisation for greater decentralisation of power at various levels. It is very interesting that the role of SSI associations has been highlighted. Nanjundan also quotes the study conducted by the Swiss Development Co-operation (SDC) through NABARD in 1994, wherein the need for strengthening SSI associations has been brought out. This study includes a national report and eight state-level reports. Considering the wide coverage and the field data collected, the NABARD study is a pioneering one, though it has not received the attention it deseves. The study has brought forward a number of potential areas which should be taken up by policy implementing agencies. This study went into the wilderness, probably for the reason that the amount of foreign funds it could bring into the country was limited. We are living in a phase of history where small industry promotion has been initiated with a missionary zeal by a number of official agencies. However, the zeal of the missionary dries up as lubrication through foreign funds remains doubtful. Probably our university professors may like to depute half-a-dozen students to try their PhD on this subject. Nanjundan points out that the heterogeneity of the small industry sector and the steady erosion of its own representative organisations have willy-nilly aided the government's natural inclination to adjust the policy to suit the requirements of established large-scale industries. How far the causation is correct is doubtful. SSI associations were never powerful and, even when organisations like FASSI were unified. they have not raised many relevant issues regarding policy formulation. For the layman the picture of an SSI association is of an 'evening club' where the members drink and revel. Calculation of cost and benefit is the very rudiment of business. A micro entrepreneur who cannot afford such merrymaking is naturally scared away from this big 'tamasha'. It is natural that a number of SSI associations, large and small, degenerated over time. It is also not a secret that some of the so-called 'membership associations' are finding it quite hard even to maintain a reasonable membership. But even with all these problems, such associations get substantial official patronage in the form of representation in official committees and foreign teams and support for maintaining an infrastructure, etc, even without any significant backing of members.

The question is not only one of centralisation; an equally important issue is that tendencies and policies towards centralisation are facilitated.

Following the NABARD study, another all-India study on the role of small industry associations was conducted last year. This author who co-ordinated the study on behalf of SDC in several states could get an opportunity to identify the reasons why SSI associations are remaining dormant and why they have been forced to dance to the tune of the bureaucracy. Our finding is that in regions of the country where there are some reasonably dynamic associations, they have

been able to provide a variety of services to the member entrepreneurs. The concept and hegemony of SSI associations in India are still largely in their primitive stage. Lobbying has been pursued as the overwhelming function of an association. This culture, obviously, has to change. Unless many clusters of small enterprises emerge and demand-driven services are demanded and offered, the bureaucracy is not likely to give way to the business community. An average IAS-man is not better than a small entrepreneur of matric standard for many practical purposes. But for the latter to assert his experience is not so easy; herein lies the importance of the culture and strength of an association.

The experience however is far from satisfactory. Our study has shown that the activities of small producers' associations are strictly confined to the better-off among small-scale industries; even here their strength and role are nominal. In the micro enterprises sector, where the socially vulnerable are a significant group, there is absolutely no concept of a producers' association. Their patronage has been wholly taken over by the NGOs and the cooperatives. How do they perform? How beneficial is their role as regards the interests of small producers? Such things need not be discussed at length because structurally the co-operatives and NGOs do not cater to the interest of micro entrepreneurs as business entities.

To talk about employment generation is noble and good. However, to have a productive system which generates employment on a sustainable basis is so difficult. The question of generation of sustainable employment is crucial; sustainable employment emerges only as a fallout of sustainable income generation. Panchayati raj is nice to talk and hear about. Probably the powers of the managers and clerks in the district industries centres may be brought down to the level of a gram panchayat. However, bureaucracy is bureaucracy; they have been directed to depend upon political will and competencies. What is really lacking is that rare breed of politicians who have a clear vision and competencies.

The business of small industry development in many countries is itself a large business. The Prince of Wales runs his Prince's Business Trust for employment generation among the poor educated unemployed; the counterparts in India have also contributed their mite to evolve a number of yojanas which have ended up in nothing but chaos. Being motivated is bad; having no motivation is worse.

Save with State Bank of India — face life with a smile

You and your family can make a picture of happiness and security, year after year. With your savings in State Bank of India, you can keep smiling through life and times.

You can choose from a wide-range of schemes that offer liquidity, high-returns and safety for your hard-earned money:

- Savings Bank Account.
- Recurring Deposit Scheme.
- Fixed Deposit Scheme/Re-investment Scheme.

With a network of 8798 branches across the country, State Bank of India is at your service, even in the remotest area.

Save with State Bank of India.

Be assured of life-long security.

For details, contact the nearest SBI branch, today.

Security is a warm feeling.

The good earth. Or leadership that provides the opportunity for new roots in the soil.

The vagaries of nature have for long been the bane of Indian agriculture

A bad monsoon, a failed crop, and it's a steep descent into debt

New India, on its part, has always stood by the farmer. By providing security through wide ranging and need-based insurance covers.

These have enabled farmers to face the

uncertainties of nature with courage and fortitude

Perhaps New India's signal contribution has been in encouraging farmers to switch to lucrative subsidiary activities. With policy covers for poultry pisciculture and horticulture (sugarcane, grapes, chikoos, etc.)

Planting the seeds of self-sufficiency Helping farmers find new roots in the soil

That's what makes New India the leading general insurance company in India

Indian Agriculture and Global Market

Discussion of the competitiveness of Indian agriculture in the context of the country joining the WTO has ignored major questions such as global commodity prospects in terms of prices and stability/instability and the movement of domestic and world market prices and of agricultural and non-agricultural prices within the country. Nor has the overriding issue of the structure of the global market been brought into the discourse. A closer look at the competitiveness of selected Indian crops in the light of evidence on domestic and international prices, the world commodity situation and the structure of the global market for agricultural commodities.

The Partition: Memory and History

Memory is a complex phenomenon that reaches out to far beyond what normally constitutes a historian's archives, for memory is much more than what the mind can remember or what objects can help us document about the past. Turning on the question of difference between history and memory, a discussion of a set of essays first serialised in a Bengali newspaper in 1950 which capture the sense of tragedy that the division of the country represented to the authors.

2143

Democracy: Incomplete Agenda

The globalisation of democracy as *the* legitimate form of government has not been accompanied by efforts to widen the universe of democracy to take account of changes in social systems and cope with agendas of transformation.

2154

Dear Money

The heavy burden imposed by high real rates of interest both on the government budget and on productive activity in the economy is coming to the surface ever more sharply and there are ominous signs already of a slow-down of industrial growth. 2119

Politics of Cogentrix

Curiously enough, the main actors in the agitation against the Cogentrix power project in Karnataka are local capitalists and commercial interests, while environmentalists have provided the needed legitimacy to the campaign.

2129

Back to Old Politics

Just when the dalits in UP appeared close to reaching out to power, the BSP has, through its alliance with the Congress, revived the very alignment which the dalits had all along struggled to shed. On the other hand, after their failure to put together an anti-BJP front including the Congress, the Samajwadi Party and the Janata Dal are reverting to the old political grouping of the backward castes with thakurs and jats.

2127

Name Game

The Shiv Sena in Maharashtra is seeking to rouse communal sentiment and disrupt cross-communal syncretic traditions through a campaign to rename a popular shrine of a Sufi saint in Mumbai.

Privatised State

In Suharto's Indonesia the privatised state has been a tool in the hands of a small elite who want to perpetuate their power to expand their illegally-gained wealth. The iron hand with which the regime maintains itself is the reason why Megawati and her PDI can count on tar more support from diverse quarters than can be explained by nostalgia for Sukarno and the past.

2135

Atlanta's Gold

What the Atlanta Olympics highlighted was the war of capital at the highest levels within the corporate gulag. The billions of dollars invested in TV time and the billboards emphasised how the Olympics were the object of massive corporate colonisation.

2133

'In Praise of RSS'

IT is indeed sad that very slanderous articles like 'In Praise of RSS' are published in your scholarly journal (July 27). If Godse was in the RSS and later drifted away from it and then shot the Mahatma, could we say that it was RSS which inspired him to assassinate Gandhiji? Every naxalite (and there are different sects among them) started off with either the CPI or CPI(M). All of them are indulging in extortion and are killing one another, but can we, by the logic of P R Ram, say that it is the CPI(M)/CPI who are the real organisations behind the mindless murders?

Ram's statement that "many enquiry commissions have implicated the RSS, even directly in many communal riots" is a blatant lie, studiously propagated by those who are self-professed "left democratic, secular, intellectuals". Firstly, hardly any report of the enquiry commissions into communal riots has ever been published and not one of any published has held that the RSS initiated the riots. Once riots begin, not only will the attackers be repulsed but certainly numbers prevail in the end.

Another untruth propagated is about the RSS's front organisations. The fact is that they are no more numerous than those of the Marxist parties. Would the communist parties own up all the acts of their fronts, the trade unions, the civil liberties outlits, the youth, student, science, etc, organs? The author accuses the RSS of the propagation of an 'authoritarian' model of society. What a canard! The Indian Marxists and communists of all sects are the ones that are preaching concepts like 'dictatorship of the proletariat', 'vanguard role of the only one party (i.e., the communists'), one party democracy, one-candidate elections, only one 'right' thought to be propagated, all history to be periodically rewritten to glority the current leader/helmsman of the only party allowed and so on. And it is indeed odd that they accuse the RSS of these very practices which are their stock in trade in every country they once ruled and

Ram holds the RSS to be "at the root of communalisation of society". Does he know which was founded first—the Muslim League or the RSS; the Khilafat movement or the RSS; separate electorates and weightage for Muslims or the RSS; Aligarh Muslim University or the RSS?

Finally, are not the JNU historians, intellectuals, CPDRs, PUCLs, people's science societies, etc, the extended arms of the Marxist/communist/naxalite outfits which themselves claim to belong to the political multinational world communism (former Comintern/Cominform)?

T MANI CHOWDARY

Secunderabad

Family Planning and the Poor

CHOOSING a permanent contraceptive is not as simple and easy as reported by Rajan, Mishra and Vimla (July 20). Son preference matters in all the states, more in rural areas than in urban. It has been observed that the middle class is more influenced by the small family norms. The poor are largely unaffected by the expensive and wasteful campaign by the champions of small family norms, despite the many incentives offered by official and non-official agencies and financed by the ministry of health and family welfare of the government of India. With new laws coming in, the lower and backward castes want more children

Since funds from national and international agencies are easily available for studies on population control, cooked up data are being presented to show successful completion of projects. The ministry of health and family welfare is no exception as the jobs and promotion of officials depend on showing progressive data. Everybody knows that the country's population is increasing.

Instead of the present wasteful efforts, a effective and permanent contraceptive wo be to spend this huge amount of money improving the economic conditions of the who are indifferent to population contracts are generally poor states. I Bihar, Orissa and MP, for example, provenough food for thought to all those worr about population growth. I am not convince with the data issued by the ininistry given the authors' Table 9. This space insufficient to go into details.

One interesting development is that, unlin the past, it is easier now to marry daughters without a brother provided father has some assets. In large towns workgirls are being preferred as life partners a sons-in-law and daughters are render equal if not better service than sons a daughters-in-law. This social change apparent in large towns and with famil having little or no roots in villages.

The desire to have a male child is base on a social and to a great extent a religionecessity. It is also an economic requirem for agro-based families. As abortion a detection of sex before birth have been quite common in cities, sterilisation generally avoided. It has a psychologi impact as it takes away the capacity to produce think hour large population could be made an as rather than a liability. Let us beware of concern being shown by the rich natic

Flagging Industrial Growth

INDICATIONS are that the impressive industrial growth of the past two years will not be sustained in the current year After touching an annual rate of 8 4 per cent in the five years before the initiation of the so-called economic reforms industrial growth had suffered a setback in the following three years from 1991-92 to 1993-94 when the index of industrial production (base 1980-81=100) rose by 0 6 per cent 2 3 pcr cent and 6 per cent respectively. In the next two years however, there was a smart recovery to 94 per cent in 1994 95 and 12 1 per cent in 1995 96 Though the growth of industrial production in these two years was fairly broad based, the sectorwise performance was mixed. The infra structure sector comprising mining and quarrying and electri city registered relatively moderate increases of 7 per cent and 8 per cent whereas manufacturing achieved a growth of 9 \$ per cent in 1994-95 and 13.7 per cent in 1995-96. As per the use based classification, the outstanding performers were capital goods (24-8 and 19-4 per cent) and consumer durables (10 2 and 38 5 per cent) though in both cases the growth in these two years to a large extent only made up for the poor performance in the first two or three years of the reforms. In 1995-96 the index for capital goods industries was 31.1 pci cent higher than five years ago in 1990 91, whereas in the preceding five years the rise had been by as much as 107 pcr cent Similarly, the growth of consumer durables in the last five years works out to 56 8 per cent compared to 77 3 per cent in the preceding five years. The general index too shows a rise of only 33 6 per cent in the last five years compared with 49 6 per cent in the previous five years. The government's claims that the reforms have given a decisive boost to industrial growth are thus clearly unwarranted, especially considering the signs already visible of a deceleration of industrial production this year

The first ominous portent is the persistent sluggishness of the infrastructure industries. Flectricity coal steel cement crude oil and petroleum products, with a combined weight of 28 8 per cent in the general index, grew by 7 8 per cent in 1994-95 and 7.7 per cent in 1995-96 pointing to a growing gap between demand for and supply of infrastructural facilities In the first two months of this year the growth of these industries has slowed down further. Their growth during April May this year was 6 6 per cent against 11 6 per cent in the corresponding period of 1995-96. And the picture would have been much worse but for the relatively good performance of cement and coal within this group. Cause for the most concern is the sharp drop in the growth of power generation to an annual rate of just 3 per cent in the first quarter of 1996 97 compared to 12 I per cent in the corresponding period last year. As it is, the deficit in power availability is estimated to have gone up from 7/3 pci cent in 1993/94 to 9/2 per cent in 1995-96

According to the industry ministry, during April May this year the growth of 24 selected industries which have a combined weight of 50 37 per cent in the index of industrial production had slowed down to 5 3 per cent. Apart from the six infrastructure industries mentioned above. 18 other industries with a combined weight of 21 6 per cent grew by only 2.9 per cent in contrast to a growth of 17.4 per cent during April May 1995. This has happened despite some industries in the group, such as sugar and automobiles continuing to register impressive though lower growth rates. Sugar output rose by 88 per cent in April June this year production of commercial vehicles was higher by 22.1 per cent and that of passenger cars by 28 per cent.

A major indicator of the slackening of industrial growth is the slowing down of expansion of commercial bank credit Between March 15 and July 19 this year scheduled commercial banks non-food credit expanded by Rs 3 527 crore (1.5 per cent) against Rs 6 758 erore (3 6 per cent) in the comparable period last year. Of course, high interest rates are an important cause of this. In regard to long term funds the picture is mixed and how things will finally turn out will depend on the capability and readiness of companies to mobilise funds from the capital market through bonds and equity and from abroad through GDRs and ECBs apart from borrowing from the term financing institutions. While the disbursements of these institutions increased by 40 per cent from Rs 3 484 crore in April May 1995 to Rs 4 877 croic in April May 1996, their sanctions were actually lower by 34.4 per cent from Rs 7.320 crore to Rs 4,804 crore reflecting manufacturing companies hesitation to commit themselves to long term loans at the prevailing high rates of interest. There are indications that GDRs and f CBs as well as bond issues if not equity issues in the domestic market may be somewhat higher this year than last year FDI inflow is also officially expected to be \$4 bn this year compared to \$ 1.98 bn last year. Actual FDI inflow in the first two months of 1996-97 was \$ 375 mn against \$ 352 mn in the same months last year. It is difficult to gauge at this stage how the availability of long-term funds for private sector investment would fare this year and to what extent they would make up for the possible decline in public sector investment

Trends in exports and imports too point to a slowing down of industrial activity this year. Exports in the first quarter at \$8,213 mn rose by 14.6 per cent against a rise of as much as 27.7 per cent in the first quarter of 1995.96 and 21.4 per cent in the whole of that year. Even more significant is the deceleration in the growth of imports. In the first quarter of this year, imports at \$9.146 mn rose by 14.4 per cent against

a rise of 37.5 per cent during April-June 1995. Even this level of import growth this year has been because of larger petroleum imports which rose by 44.2 per cent from \$ 1,585 mn in April-June 1995 to \$ 2,284 mn in April-June this year. The growth of non-POL imports has been just 7.1 per cent this year against 41 per cent last year.

The sluggish behaviour of saving and investment constitutes a broader macroeconomic basis for the misgivings about the sustainability of the high industrial growth of the last two years. To make possible the absorption of \$4 bn (Rs 14,500 crore) of FDI and generally to finance a higher level of domestic investment the rate of domestic saving has to be significantly stepped up, whereas indications are that the domestic saving rate has stagnated at around 23 per cent of GDP for three years from 1993-94 to 1995-96 (with in fact a slight fall in 1995-96) and domestic investment at around 23.5 to 24 per cent. Making a rough and ready assumption that the current account deficit this year will be limited to 2 per cent of GDP, any substantial step up in investment to 27 to 28 per cent will require a domestic saving rate of 25 to 26 per cent in 1996-97 - an increase of two percentage points or more which is simply not in sight. The RBI has released CRR accumulations to augment liquidity. There has also been an attempt to attract larger portfolio investment by Flls. But experience shows that such injection of external liquidity gets absorbed largely in stock market, real estate and inventory assets and there is really no substitute for domestic saving for giving an enduring push to investment.

BHIWANDI TRAGEDY

Infrastructural Breakdown

THE common perception of a disaster is that it is a rare occurrence, the outcome of an exceptional set of circumstances when all fail-safe mechanisms have given way. Thus, people should not be dying of gas leakages because in the first place such a leakage should not have occurred; secondly, even if it did there are in place structures which would prevent death and mitigate the suffering of the people affected and limit the damage; and third, even if this were not possible, there are efficient mechanisms to compensate those affected, by whatever means, for the damage caused by the negligence of the state and its agencies. But people do die and suffer from causes they have no control over and circumstances which have occurred because of the failure of the welfare state to make provisions to ensure a safe and sufficient livelihood for its citizens

This is the story of Bhiwandi in Maharashtra. Over two lakh workers are employed here in one of the oldest established modern industries in India, textiles, most of them migrants pushed out of their native villages and towns to look for jobs, living on a pittance because the concept of minimum wage does not exist, eating at canteens and messes which have hardly ever seen a visit by a food inspector. Earlier this week hundreds were taken ill after eating at their regular mess or 'bissi'. At the hospitals, some private some public, they were treated with the 'usual' remedies for an 'ordinary' bout of food poisoning. It was only when some of them, malnourished and with little immunity to any pathogen, took a turn for the worst that the medical community got its act together and decided that it must be a case of botulism, caused by micro-organisms in stale food and that the victims needed an antitoxin for the lethal neurotoxin. This of course was a first approximation, an educated guess - the diagnosis has yet to be confirmed by a battery of tests which the Food and Drugs Authority in the state as well as several other institutions are ill-equipped to handle. As of now there is no report of any of the hi-tech private hospitals with their ultra-modern laboratories volunteering to do the work to facilitate speedy diagnosis.

And then there was another problem - in none of the sophisticated, long-established or modern institutions of medical science anywhere in the country was the antidote available. So it had to be flown from Poland and, reports say, will arrive only by the end of the week, by which time it may be too late to save the patients. And what is even more surprising is that nobody is certain that the antidote will even work because botulism has not been confirmed. One authority has been quoted as saying that "if the antidote does not work, we'll know it is not botulism". In which case why was it not possible to acquire a few trial doses immediately, rather than a huge consignment which may be of no use? This underlines another aspect of health disaster management: there appears to be no scientific logic or design in the search for the causative agent - whether it is plague or botulism the entire exercise is a combination of hits and misses. Admittedly, the situation is not the same as a deliberately planned research programme. However, what is increasingly obvious is that little thought is given to equipping the medical institutions and their staff to deal with emergencies which require a minimum acquaintance with scientific search.

There are a host of questions which arise: what has the labour authority done to improve conditions in the thousands of powerloom establishments which carry on in abysmal conditions of work and pay for those employed? When the entire powerloom industry in the area is manned by migrant workers, surely, the state's labour welfare board should take cognisance of this fact and provide for or facilitate the provision of safe and adequate food and shelter and appropriate medicare? Given that Mumbai and its

医神经 医气管造器 environs with its dense population, poc housing, unsafe food and water supplies ar so vulnerable to hazards such as foo poisoning and myriad other infections an illnesses, some commonly known others ran should there not be efficient coping system in public hospitals and medical institutions It is indeed surprising that Maharashtra': particularly the Mumbai-Pune belt's, moder medico-research institutions could not pro duce expertise to deal with the disaster an the experts had to be flown in from New Delh Hyderabad and, of course, Atlanta in the US

Disasters often lead to some thinking o disaster management and infrastructura changes are made to cope with them. Bu these remain local innovations and inputs After the Bhopal disaster, several infra structural changes were made and disaste management exercises were instituted, bu they have remained localised, in Bhopal and in other areas where such disasters hav occurred. After the plague, Surat has see considerable change with better plannin and city administration, but again there ar hundreds of cities like Surat which are waitin for medical disasters to occur. What is neede is a coherent policy for minimising th chances of such tragedies occurring and the mobilising the infrastructure, includin supplies, literature and education for copin with the disaster. At this point of time, wit a state preoccupied with globalisation infrastructure development means quit something else and certainly the problems c the masses are minor irritants in the race t expand India's economic horizons.

GUJARAT

BJP in a Spot

SHANKERSINH WAGHELA's decision 1 go ahead with his rally of BJP dissidents o August 20, in spite of being issued a shocause notice, not only precipitated h expulsion from the BJP, but has also pave way for a formal split of the party in Gujara The BJP is mobilising all its organisation strength to isolate Waghela and counter h threat to its government in the state.

By engineering the defeat of Waghela the Lok Sabha polls and by removir Kashiram Rana from the presidentship of tl state party unit, the BJP's national leadersh decided at the national executive meeting Bhopal to toe the line of the RSS-VI: combine in Gujarat. Waghela's revolt, backe by 48 MLAs in September last year, again the actions of Keshubhai Patel had caug the RSS-VHP lobby napping. As a resu Keshubhai Patel had to relinguish his chi ministership while Narendra Modi, an R. man, had to be removed from the post general secretary of the state unit. The Pate Modi faction got its own back when succeeded in defeating a large number pro-Waghela candidates in the Lok Sab

elections. Convinced of the relative strength of the Patel-Modi faction, the party high command decided to adopt a hard line against the dissidents in Gujarat. The leadership now feels that Waghela no more commands support of the MLAs who stayed put with him in Khajuraho. It had to take a soft stand towards him then, for not only would a revolt by him have threatened the Keshubhai Patel government but it could have adversely affected the patry's prospects in the parliamentary elections.

The BJP's partisanship towards the RSS VHP lobby in the state is evident. The party high command has taken no action against those belonging to the Modi faction who were involved in hooliganism against Atmaram Patel, a senior cabinet minister and a Waghela supporter, after the civic reception given to the then prime minister Atal Behau Vappayee in Ahmedabad Instead the axe tell on Kashiram Rana The RSS-VHP combine which was not successful in defeating Rana in Surat in the Lok Sabha polls thus avenged its disgrace. On the other hand Keshubhai Patel was put in charge of Gujarat and his supporter Vajubhai Vala replaced Rana as the president of the state unit The ascendance of the Patel Modi faction in Gujarat became clear when most of the 12 state party observers appointed to select candidates for the posts of mayors in the six BJP controlled municipal corpora tions were seen to belong to the Patel lobby

Recent developments in the Gujarat BJP are a clear signal to Suicsh Mehta and Kashirani Rana to distance themselves from the Waghela faction. Mehta has been assured that there is no threat to his ministry and supporters of both Mehta and Rana were included among the observers for selection of mayoral candidates. Formation of a new party by Waghela will affect the social base of the BJP in the state. Though the BJP leadership has taken the precaution of substituting an OBC Rana with an OBC Vala the exit of Waghela may reduce the party's support among the kshatriya community Waghela is also shrewdly exploiting the discord between the BIP and the Shiv Sena in Maharashtra by making overtures to Bal Thackeray to support his cause in Gujarat If Thackeray who has scores to settle with the BJP for embarrassing his party over Chhagan Bhujbhal and the Kini murder case decides to befriend Waghela the political equation for the BJP is going to get disturbed in Manarashtra too

NARMADA PROJECT

Evading Issues

AT the prime minister's intervention the dissonance over the height of the Narmada dam among the riparian states has been resolved for the time being. The dam height will on paper remain at 455 feet (139 metres)

but the current construction schedule is to allow the Gujarat government to complete the construction up to 436 feet (133 metres) This was the decision reached at a meeting of the three state governments which had come together on a directive from the Supreme Court The apex court processing a petition by the Narmada Bachao Andolan to review the cost-benefit issues pertaining to the project had directed the state governments to look into the matter and arrive at an agreement on the height of the dam. It may be recalled that the Madhya Pradesh government had suggested that the dam height should not go heyond 436 feet although the state chief minister at a recent press conference had suggested that the height of the dam could be reduced to 384 teet (117 metres). Its argument has been, firstly that the volume of water in the Narmada was much less than when the project was conceived and, secondly, that there would be fewer tamilies displaced with the reduced height. The three states now appear to have decided to concede the Gujarat government's demind for keeping the projected height at 455 feet, with the proviso that after reaching 436 feet there would be a review of hydrological data on the volume of water over the next live years

The Narmada Bachao Andolan has rightly pointed out that the entire process of airriving at a decision does not appear to have considered the ciucial question of displacement and rehabilitation. Reducing the height of the dam means a reduction in the area submerged and the number of familie uprooted Even if one were to concede that the project was a necessity for Gujarat the imperative was to arrive at the optimum height taking into consideration all these factors. Clearly, the decision reflects the clout of the Gujar it government in the deliberations and is indicative of the Deve Gowda government's limited perspective and priorities with regard to infrastructure development projects

What is noteworthy here is also the fact that earlier this month the Narmada Bachao Andolan had categorically stated that the Gujarat government s announcement that the Sardar Sarov ir Construction Advisory Committee had approved the raising of the spillway portion of the dam from its present height of 803 metres to 110 metres was incorrect. The Andol in had alleged that no such decision had been reached at the meeting which had not been able to resolve the contentious issues of environmental impact hydrological data and rehabilitation. It is surprising therefore that the prime minister's intervention has smoothed things to such an extent that there appears to be a moratorium on discussing technical issues concerning the dam. It has now been suggested more or less that discussion of these issues be put off for another five years - a highly risky proposition. If indeed the hydrological data point to a reduction in the volume of water in the Narmada making it unnecessary for the dam height to be what was proposed when the plans were first drawn up, the present decision is technically and financially unsound and raises new questions with regard to the cost-benefit analysis of the project And if new and more comprehensive data are available on the environmental impact of the dam ignoring the issue for five years may well lead to irreparable ecological damage As for the rehabilitation issue which appears to be a marginal concern of the three governments, it is surely significant that a section of the Gujarat oustees who had accepted the rehabilitation package are now returning to their old sites because of the inadequate facilities in the new areas

SEXUAL HARASSMENT

In the Public Gaze

TWO decades ago rape, whatever the class of the victim was rarely reported, unless it was an extraordinarily gruesome mass event Few rapes were reported to the police, especially when the victim involved belonged to respectable' society that is the middle and upper classes and was not a destitute. It is not that the situation has altered dramatically today but while there is always an element of shame that attaches to the victim in society there is more awareness among the victims and their families that the occurrence is not necessarily a consequence of the victim's behaviour and so there is need to seck redressal. Rape is an offence in the public gaze it is visible as an act of violence perpetrated on women, among the more extreme gestures of abuse and indignity And yet, while it is punishable in law, patri archal society still debates about the under lying causes and whether indeed the victim was in fact the one who prompted the act

The Bajaj-Gill case in Punjab and the judgment whatever the immediate circumstances locates sexual harassment as an offence in the public sphere. The fact that Gill is a celebrity is in a sense immaterial to this. As also the fact of IPS IAS tensions. Any case which has been so diligently puisued by the victim in an effort to obtain redressal may well have achieved the same purpole. Only it would not have received the same sort of media coverage, which is what makes sexual harassment not only a punishable offence but visibly so.

The Gill verdict will undoubtedly have the effect eventually of women becoming more aware of the fact that codes of behaviour so long accepted which incorporated gestures or actions demeaning to women may in fact be objected to. It may also contribute to a shake-up of accepted forms of social intercourse. What constitutes sexual harassment is under much debate and there will be many definitions of what is objectionable and what is not. However, it is also true that none of

this will affect the lives of working class women who toil to eke out a living, where the daily grind includes having to put up with the lewd remarks and gestures of contractors and supervisors, of being physically pulled and pushed 'in the course of work' and of putting up with the innuendoes of male colleagues on the factory floor. There is need therefore to disseminate information about the case and the judgment to working women everywhere. Only then can the construction of a different social perspective where dignity is accorded to all women move forward. This is important, for the changing of social perceptions of women has to go together with the transformation of the material conditions which make for the subjugation of women.

MADHYA PRADESH

Evenly Balanced

FACED with determined efforts to dislodge him from the state chief ministership, Digvijay Singh is holding on to his position skilfully. His latest move demanding the resignations of all the ministers in his cabinet has won him a respite before the tug-of-war between the pro- and anti-Rao factions in the state resumes

The demand for the removal of Digvijay Singh gathered momentum after the dismal performance of the Congress(I) in the Lok

Sabha elections. As a result of the infighting in the Congress, the BJP which had won 12 seats in the 1991 Lok Sabha elections was able to capture 27 seats this time. Digvijay Singh who throughout the campaigning had followed directions from the centre, attributed the electoral defeat to the departure of 'tall leaders' like Arjun Singh and Madhavrao Scindia from the party. Immediately, state leaders owing allegiance to Narasimha Rao who include Manak Agarwal, Pradesh Congress Committee spokesman, Parasaram Bharadwaj, the Madhya Pradesh Congress Committee president, Subash Yadav, the deputy chief minister, Dilip Singh Bhuria, the tribal MP, and Shyam Charan Shukla, ex-chief minister - ganged up and hurled a barrage or charges against the functioning of Digvijay Singh. Besides reviving the demand for a tribal to be made chief minister and accusing the administration of bureaucratic mertia, the dissident leaders held Digvijay Suigh responsible for not initiating action against those MLAs and ministers who openly canvassed against the official Congress candidates in the parliamentary elections. It was the latter charge that was taken up seriously by the AICC when it asked Digvijay Singh to axe seven ministers allegedly close to Scindia and Arjun Singh and to shift six other ministers to minor portfolios

Digvijay Singh whose prime objective has been to ensure the survival of his government

no matter what the upheavals at the centre, has seen to it that a reshuftle of his cabinet does not hurt any of the major factions in his ministry. Thus by asking for mass resignation of ministers and allowing the ministers charged with anti-party activities to place their case before the party high command, he has cleared the way for a reshuffle without antagonising any faction. Moreover, Digvijay Singh knows that neither the pro-Rao lobby nor the pro-Arjun Singh and Scindia lobby are in a position to control Madhya Pradesh on its own. The defeat of Arjun Singh in the Lok Sabha elections and the overall pathetic performance of Congress(T) in the state have dampened the spirits of Arjun Singh's supporters. In case the Ariun Singh and Scindia faction contemplates any drastic action, the chances are that the BJP and the BSP will stand to gain. Narasimha Rao who is already facing a stiff challenge to his position at the centre, cannot alienate Digvijay Singh and risk endangering the Congress government in the state. In fact the waterthin majority that the Congress has in the state assembly is ironically preventing the two major factions within the state from pulling the carpet from under the Digvijay Singh government. The two factions can sustain their evenly-matched relationship only if Digvijay Singh remains at the helm of affairs. That, for the moment at least, is Digvijay Singh's strength.

Announcement

The Economic Research Unit of the **Indian Statistical Institute**, **Calcutta** will host a **two-day conference** during the period **6-7 Jannuary 1997** on **'Economic Reforms in India'**. Analytical papers of both theoretical and empirical nature related to the above theme are solicited. All papers will be refereed and some travel grants are available for authors from outside Calcutta whose papers are accepted for presentation at the conference.

Papers are to be submitted in duplicate to:

Professor Sugata Marjit / Professor Abhirup Sarkar Economic Research Unit Indian Statistical Institute 203, B.T. Road, Calcutta - 700 035, India Fax 33-556-6680

e-mail: marjit@isical.ernet.in or abhirup@isical.ernet.in

COMPANIES EPW Research Foundation

INDIAN RAYON AND INDUSTRIES

Higher Sales

INDIAN RAYON AND INDUSTRIES, a Kumaramangalam Birla group company, closed the year ended March 1996 with a sales turnover of Rs 1,211 crore, up by 30 per cent from Rs 929 crore recorded in the previous year Other income moved up by 46 per cent Interest costs were up by 38 per cent Provision for depreciation and tax moved up by 47 per cent and 1 per cent, respectively The company ended with a net profit of Rs 185 crore, up by 41 per cent from Rs 131 crore recorded in the previous year The company has hiked dividend payment from 57 50 per cent to 62 50 per cent for the year under review

Indian Rayon and Industries has interests in grey and white cement, viscose filament yarn (VFY) textiles, carbon black, sea water magnesia, caustic soda and fibre glass. The cement division, the single largest contributor to the company's business, produced 2.36 million tonnes (mt) against 1.68 mt recorded in the previous year. Like in the previous year production was constrained by poor quality of coal and poor availability of wagons coupled with erratic power supplies.

Indian Rayon is one of the most economical producers of carbon black as it uses waste gases to generate power thereby cutting down on power costs. The division which has a market share of 24 per cent, produced 51 056 tonnes of carbon black against 43,140 tonnes produced last year. Entering the international market with an export of 100 tonnes in the previous year, the division exported 1,050 tonnes for the year under review.

Production at the textile division was affected due to an illegal strike at the company's plants at Rishra. The strike which started in mid-February this year lasted till May Severe competition in the international markets notwithstanding, the exports of the division stood at Rs 29 crore, about 34 per cent of its total turnover.

The company's white cement division produced 2 36 mt of cement as compared to 1 68 mt in the previous year, a risc of 40 per cent. The white cement division recorded capacity utilisation of over 100 per cent and received for the second year in succession an export award from the government of Rajasthan for its outstanding export performance, in spite of the fact that the company had curtailed exports to meet higher domestic demand.

Indian Rayon has installed an additional capacity of 1 2 mt for cement and 20 mw for thermal power generation. The cement division now has a capacity of 3 mt for

clinkerisation, 4.2 mt for cement grinding and 38.5 mw for captive power generation. The company is installing a second line for white cement which will take the capacity to 3.30 lakh tpa from the existing 1.50 lakh tpa.

The company spent Rs 119 crore in the last two years on capacity additions, backward integration and modernisation of its three textile units. The company is also expanding the capacity of the insulator division from 6,000 tpa to 10,000 tpa. After the expansion the combined production of the insulator units will be in the range of 30,000 tonnes.

The company is currently implementing its sea water magnesia project at a cost of Rs 272 crore, which is expected to be commissioned by September this year

The company is also setting up a caustic soda plant at Verawal at a cost of Rs 104 crore. About 25 per cent of the production of the plant is intended for captive consumption by the company's rayon division. A 165 mw co-generation thermal power plant is being set up at the rayon division at Verawal at an estimated cost of Rs 74 crore and is expected to be commissioned by mid 1996. An additional 12 mw captive power plant, an extension of this plant, is also planned at an estimated cost of Rs 40 crore.

SANDOZ

Fall-Out of Global Merger

Making an entry into India with trading and formulations Sandoz (India) moved on to dyestuffs, seeds industrial chemicals and agrochemicals During the year under review, the company hived off its chemicals business into a new company called Clariant India. The company has plants in Gujarat and Maharashtra.

Sandoz closed the year ended March 1996 with a sales turnover of Rs 224 crore a fall of 23 per cent from Rs 293 crore recorded in the previous year. Other income was up by 63 per cent. Interest costs were down by 42 per cent. Provision for depreciation and tax was down by 57 per cent and 20 per cent respectively. Net profit fell by 18 per cent to Rs 15 crore for the year under review. A dividend of 40 per cent has been recommended by the company. Sandoz announced a voluntary retirement scheme in July 1995 which was opted for by 137 employees. The company incurred a cost of Rs 5 crore on the scheme.

Domestic sales of the pharmaceuticals division rose by 14 per cent over the previous year. The exemption of import duty on life saving drugs, viz, Leucomax and Sandostatin, was fully passed on to the consumers. The

company has come out with Leponex for schizophrenia, Parlodel for infertility, Sirdalud for spasticity and Lamisil for fungal infections

Inits seeds division, Sandoz has developed seeds that ensure improved yield have higher nutritional content and are highly disease resistant. The company introduced a virus resistant tomato variety which was well received. In July 1995, the company shifted its base of operations to Pune and plans to set up a research station there for evolving new hybrid varieties. Sales of the division grew by 35 per cent over the previous year.

In the agrochemicals sector the company maintained its sales in spite of a variable monsoon and competitive pressures. The company successfully placed Ekalux in the markets all over India Ekalux is the first emulsion in water formulation (aqua flow). Sales of non-quinalphos products were higher than in the previous year.

The company's exports doubled to Rs 42 crore for the year under review Major exports came from the pharmaceuticals division. The company achieved record levels of calcium salts production and was able to fully utilise its pharmaceuticals plant in the Kandla Free Trade. Zone

The pharm a cuticals division is to launch an anti-fungal drug called I amisil which is highly effective in treating a wide range of skin and nail infections. The drug is to be sourced from Sandoz Pharma, Switzerland

Sandor is considering bringing its nutritional products in the Indian market. This will involve setting up a new nutrition division. Internationally the company caters to four important segments of nutritional needs viz, clinical nutrition sports nutrition, special nutrition or reform products and health food drinks. The company is undertaking a research of the Indian market to assess the demand for nutritional products tastes and habits of the Indian consumers as also the economic viability of the project. The company is introducing a new synthetic peptide drug for treating cancerous tumors.

The global merger of Ciba Geigy and Sandoz has resulted in the formation of a new entity called Novartis. The integration process to form Novartis. India has begun and is expected to be completed by the end of the current financial year.

BASF INDIA

Expansion Plans

Beginning operations as a monopoly producer of thermocole technically known as styropore BASF India has over the years diversified into leather chemicals expand

able polystyrene, agrochemicals and pest cides, tanning agents and dyestuffs. Leath chemicals account for more than 50 per cei of the company's turnover and the compan is in an advantageous position as it faces littl or no competition as far as leather chemical are concerned. BASF India has plants a Thane and Bokaro. In March 1996 it commissioned a plant in Mangalore.

The company closed the year ende March 1996 with a sales turnover of Rs 21 crore, up by 17 per cent from Rs 172 cror recorded in the previous year. Other incom moved up by 18 per cent. Interest cost rose by 33 per cent. Provision for depreciation moved up by 24 per cent, while that fo tax was down by 76 per cent. Aided by rise in technical advisory services th company recorded a rise of 59 per cent its net profits which moved up to Rs 20 cror for the year under review. A dividend of 3 per cent has been recommended by th directors.

Volume of sales from the leather chemicals division increased by 4 per cent compared to the previous year. The colours an dispersions division performed satis factorily with exports from the divisio increasing from Rs 4 crore to Rs 5 crore. I keeping with the growing demand in th dyestuff and construction industry, th company plans to expand capacity of th dispersions business. Operations from th chemicals division was satisfactory in spit of losing business in some important pro ducts to China. Sustained demand for th company's products from the consumin industries saw the division through. The sal of crop protection products during the yea increased by 19 per cent compared to th previous year. High fluctuations in th international prices for styrene, the majo raw material, affected the performance of th plastics division.

The Mangalore project which has bee completed in 22 months at a cost of Rs 10 crore has an installed capacity of 1,700 tonne annually for speciality dyes and another 8,50 tonnes for dispersions.

BASF has earmarked an investment c Rs 60 crore in various expansion plar undertaken at Thane and Mangalore to b completed over a period of two years.

A doubling of the dispersion capacity: Mangalore at an investment of Rs 3 croi is on the anvil as is an investment of Rs 1. crore in the manufacture of Helizirin pigments used in the printing industry. BAS is also setting up facilities for Tamol liqui used in the construction industry at Mangalo at a cost of Rs 3 crore.

To finance its expansion plans the compar is planning a rights issue of Rs 58 crore. part of the proceeds will go towards au menting the long-term working capit requirements.

High Cost of Funds Forces Industrial Slow-Down

The heavy burden imposed by the high real rates of interest both on the government budget and on productive activity in the public and private sectors is coming to the surface more sharply than ever before. There are in fact ominous signs of an incipient slow-down of industrial growth.

I Oppressive Real Rates of Interest

THE current financial sector developments seem to portend incipient signs of slowing down of industrial activity, for which the high cost of institutional credit for inventory and investment financing appears a major contributory factor. The oppressive character of the high real rate of interest in the economy imposing a heavy burden on both the government budget and productive activities has come to the surface more sharply than ever before. And this has been spawned curiously in an environment of abundant liquidity available in the system.

Apart from the sizeable release of cash reserves, high level of deficit spending by the government as reflected in the phenomenal expansion in ad hocs and net RBI credit to the government has contributed to the acceleration in monetary expansion. But the demand for credit has slackened. Between March 15 and July 19 this year, the incremental credit-deposit ratio has dipped to 16 per cent against 64 per cent in the corresponding period last year. Even in absolute terms, nonfood bank credit has expanded by only Rs 3,527 crore (1.5 per cent) this year compared with a substantial growth of Rs 6,758 crore (3.6 per cent) during the comparable period last year. Instead, despite there being substantial excess holdings, scheduled commercial banks have further added to their investments in government securities this year (by Rs 10,258 crore) compared with last year (Rs 3,003 crore).

The emphasis on the bottomline for banks and public financial institutions (FIs), premature imposition of credit adequacy norms, dilution of their societal goals and unrestrained high interest rates offered on

funds mobilised by them have made the loan rates in the system generally usurious and sticky. As banks continue to charge lending rates of 20 per cent or over for the generality of their loans and the FIs in the region of 19-22 per cent, corporates have reportedly begun to slow down the availing of cash credit and term loans. Only a few of them can access the alternative commercial paper (CP) market where the rates have come down to 12-14 per cent. No doubt, in deference to the authorities' preference for lower interest rates, banks and FIs have made some gestures of reducing their prime lending rates (PLRs). For banks, the lowering of the effective cash reserve ratio (CRR) to 11.5 per cent and the downward revision of the one-year deposit rate from 12 per cent to 11 per cent would have brought down the cost of funds but for the intense competition among banks to mobilise deposits at free rates of interest for maturities beyond one year; these competitive rates at the margin may be further influenced now by the freedom given to big-size nonbanking financial companies (NBFCs) to fix their own deposit rates.

The reported reductions in PLRs by banks and FIs have been only symbolic and unequal to the needs of the real sector situation. While some major nationalised banks (SBI, PNB and Union Bank) have rolled back their carlier hike in PLR by one-half of one percentage point to 16 per cent, important foreign banks reduced it from 19.5 per cent to a range of 18 to 18.75 per cent. The IDBI and the ICICI also reduced their PLRs to 16 per cent - by one percentage point which was added barely a fortnight earlier in June. But, first, many other banks have refused to reduce their PLR. Secondly, almost all banks and FIs have their modal rates far higher at 20 to 22 per cent - than their PLRs. In fact, FIs have again breached their agreement to restrict the upper end of the lending rate structure within four percentage points of their PLR and, instead, begun to lend generally at around 22 per cent. Above all, these rates have remained sticky at a time when the general inflation rate has come down and more importantly, business expectations in regard to output and investment activities have suffered a setback.

HIGH COST OF PROMOTING GOVERNMENT SECURITIES MARKET

Besides the persistence of high cost of commercial credit, the RBI's well-intentioned policy of promoting the business of primary dealers (PDs) so that the secondary market for government paper could be deepened and strengthened has been exploited by the banks and PDs in concert in such a way that the cost of borrowing for the government has turned out to be much more than even last year. Effective July 10, 1996, RBI started paying commissions to PDs on the purchase of TBs and securities in the auction market to the extent of 25 paise for 91-day TBs, 50 paise for 364-day TBs and Re 1 for government securities on every purchase worth Rs 100 so as to provide incentives to PDs to develop the secondary market. As a supporting measure. RBI also reduced the refinance rate by one percentage point each to 11.5 per cent for TBs and 13 per cent for government securities. However, all four PDs, who have been sponsored by (or associated with) bigger banks, have prompted their parent banks to route their bids through PDs themselves with the obvious bait of sharing the commission offered by the RBI directly or indirectly through an adjustment in the resale price of government paper. Consequently, instead of competing with each other which would have imparted greater depth to the market and certainly lowered coupon rates in an environment of a surfeit of liquidity, the banks and PDs started colluding with each other to force the RBI to fix a higher yield rate as evidenced in the two government securities auctions in July where the cut-off coupon rates were higher than last year's for corresponding maturities and also higher than even the market expectations; likewise, the expected downward trend in the 364-day TB rate pari passu with the precipitate fall in the yield rate on 91-day TB

did not occur (see a subsequent section).

The above concerted action on the part of the PDs and banks was particularly conspicuous in the secondary market transactions in the freshly-issued dated securities and 364-day TBs during the second half of the month. Thus, immediately after the auction of the 13.62 per cent two-year paper on July 30, the succeeding two days saw huge outright SGL transactions in this paper: Rs 817 crore on July 31 and Rs 424 crore on August 1; there was a transaction of Rs 90 crore on the third day, thus absorbing Rs 1,301 crore out of the Rs 2,000 crore issued in these immediate sales. However, significantly, of these, only Rs 366 crore were at prices below par or at yield rates above the cut-off yield of 13.62 per cent. Thus, over 70 per cent of the secondary sales on immediate consecutive days were at above par value prices ranging from Rs 100.02 to Rs 100.55 or yield rates ranging from 13.6082 to 13.2978 per cent. It is a moot point as to which were those banks or other parties that failed to procure the paper at the primary auction on the previous day and bought it at a higher price the next day and what has prompted them to do so? It is quite likely that the PDs are arbitrarily sharing a part of the RBI commission with banks rather than selling the scrips at a discount. If so, it may appear an unhealthy practice. The same phenomenon was noticed in the July 17 issue of 364-day TBs issued at a cut-off yield price of Rs 88.80 and a yield of 12.61 per cent. Of the secondary transaction worth Rs 142 crore in this paper the next day, as much as Rs 132 crore were at higher prices and lower yields than the issue price or YTM. In this case, the secondary market transactions, however, constituted a small proportion out of the total issue of Rs 1,063.50 crore.

Bethat as it may, the payment of commission has had the unintended effect of further pushing up the coupon rate on government paper. The commission was a special and unusual device to facilitate the PDs to takeoff the ground as it were, but it would have served its objective if the PDs used the system to offer competitive rates and thus conferred some benefits of competition to the government in the form of getting funds at a better price. As opposed to this, PDs and parent banks acted in unision and many banks were reported to have either bid only through PDs or bid in the auction but deliberately quoted a higher rate so that their bids would get rejected and they could buy the paper at a discount from the secondary market through a PD. This way, the coupon rate got pushed up as the central bank had limited manoeuvrability in containing the coupon rate in a situation of sizeable deficit spending by the government.

There are many other dimensions to the unintended effects arising from the RBI commission. First, in absolute amounts, the discounts would mean a large sum, and are proportionately even higher in such papers as zero-coupon bonds (ZCBs). As part of its own promotional role, the RBI has chosen to bear the cost itself and not pass it on to the government as the cost of debt management. Even so, with coupon rates

being pushed up, the commission has imposed an additional burden on the exchequer even if partly indirectly. For a twoyear 13.62 per cent security, the extra burden may have been as much as 1.50 percentage points. Secondly, the resultant distortion in the yield curve is sure to be reflected in a further firming up of the rates for future issues of government paper, which is contrary to the objective of creating the institution of PDs. While the premise is valid that the PDs are in a nascent stage and hence the sumptuous support from the authorities, the unhealthy tendencies that the arrangement

may create deserve to be nipped in the bud To begin with, the rates of commission offered are unduly high for sovereign paper handled in bulk Besides, it is possible to debar PDs from claiming commission if the relevant government paper successfully subscribed for 15 transferred to parent or associate banks or for that matter to any bulk buyer like bank or insurance company within the value-dated period for subscription. Also the modus enerands of financing such surrogate ourchases are required to be examined arefully Either the banks provide clean oans, or the PDs indulge in short-selling which is prohibited under the Securities Contract Act Finally such subventions are closely linked to the broader goal of achieving an enlargement of the market for gilt-edged securities outside the group of traditional and captive investors. The commission linked only to the successful subscription amount has the implication of artificially boosting the effective yield rate. Apart from the various repercussions highlighted above, it would also have a deleterious effect on the conduct of the RBI's open market operations.

26/7/96

Unlike in advanced countries where the government paper is sold primarily through PDs who in turn nurture the secondary market, banks and insurance companies will remain bulk subscribers at primary auctions in India It will take a while before PDs emerge as Table 4 Auctions of 91 Day Treasury Bills

dominant players in the market in terms of resources and expertise. The benefit of competition which the government ought to get in the form of competitive prices in an environment of large players in the market should not be negated by a policy that confers the largesse to the PDs at the expense of a realistic cost to the government. In such a situation, it is better that authorities lower their sight for PDs' growth and confer such benefit on them that would induce them to expand their clientele base for government paper amongst small institutional investors such as trusts, provident funds and corporates In this regard, the direct targeting of individuals, which is also being canvassed

Period to Maturity in Ascending Order

by the RBI, will have a heavy opportunity cost for the government which deserves to be avoided; the interests of the individuals are better served by financial intermediaries which mobilise savings from them.

Another problem in banks bidding through PDs is that the latter are merely acting as a post office in passing on the banks' bids to the RBI. PDs are expected to have better skills in bidding fine rates in this market, which should determine their success ratio in the auctions – an important criterion the RBI will look at in its year-end review of each PD. When banks bid through PDs and the bids get rejected because the bank bids are off the mark, the success ratio of PDs will be artificially boosted.

OPEN MARKET OPERATIONS

The RBI was seen to be quite active on the open market operations (OMOs) front during July but in a more business-like manner. It issued as many as ten price lists during July. It bought securities worth Rs 183 crore and sold securities worth Rs 292 crore. The net OMO sales thus were to the tune of Rs 109 crore. The non-aggressive stance of the RBI on buy and sell fronts is explained by the fact that the liquidity situation is yet well within control.

OTHER DEVLLOPMENTS

In an interesting development, the RBI started publishing the weighted average price offered by bidders on 91-day TBs effective from the auction held on August 2; this price would represent the average for all competitive bidders when there are no devolvements; if there are devolvements it would represent the average price for all categories: competitive bidders, non-competitive bidders (who get at

the weighted average of competitive bidders) and those devolved (at the cut-off price). In the August 2 auction, while the cut-off price was Rs 97.99 (yield of 9.04 per cent), the weighted average price of competitive bids was Rs 97.83 (yield of 8.89 per cent), suggesting a fairly narrow dispersion in the quotations (considering only 6 bids for Rs 416.62 crore were accepted out of 82 bids for Rs 1,899.10 crore). The information will bring in more transparency to the secondary market.

II Money and Foreign Exchange Markets

Call Money Market

The most perceptible impact of the easing of short-term liquidity was seen in the call money rates behaviour in July (Tables 1 and 2). From a band of 10-13 per cent witnessed since the beginning of the current financial year, call rates crashed to historically low levels of 3-4 per cent. The weekly weighted average of call rates as compiled by the RBI dipped from a range of 10.10-10.94 per cent

during June to 5.14 per cent, 1.66 per cent, 1.27 per cent and 5.34 per cent in the fo weeks of July, respectively (Table 1). The have been the lowest weighted rates achieve ever since April 1993. In the first week July, the rates even crashed to 0.5-1 per ce (Graph A), as the call money market wa dominated by a multitude of lenders and fe borrowers. Only some foreign banks we reported to have borrowed at low call rate not only for covering their FCNR(B) deposi but also for arbitraging between call mone market and cash/tom forward forex marke The rate did not pick up significantly eve after the initial flurry was discounted ar outflows of over Rs 2,700 crore toward subscription to the government paper too place. This was on account of inflows far i excess of outflows. Contributing to the depos growth over Rs 3,000 crore during th fortnight ended July 5 or remaining outsic it as liquidity inflows in July, were intere payments on food credit (Rs 500 crore redemption of TBs (Rs 950 crore) and F investments (Rs 1,074 crore). The market di show an aberration in the third week of th month in intra-day dealings, when the ca rates jumped from a low of 0.5 per cent | 10.5 per cent on July 23 as many banks ha locked in their funds in 4.6 per cent on-te TBs and traditional lenders, who had investe more than Rs 2,000 crore in 30-day deposit were absent from the market. Further, outflo of Rs 1,250 crore on account of secor instalment on part-paid government stoc and withdrawal of UTI from call mone market to pay dividend worth of Rs 2,00 crore on account of US-64, firmed up ca rates, which, however, closed at 5.5 per cer on the same day. Banks resorted to repo around this time after which the rates cam back to the 3-5 per cent range.

Foreign Exchange Market

During July, the rupee rate tended t depreciate (Graph B). Opening at Rs 35.0 on July 1, the rupee lost ground on the morning of July 3 to touch Rs 35.30 due to purchases by SBI and RBI. However, a exporters started selling US dollars, the rupe recovered some strength to reach Rs 35.1 in the next few days. The appreciation of the exchange rate could not be sustained as St started buying dollars on behalf of companies. However, as the rupee tended weaken on demand from the importing community, mainly diamond importers and the public sector on July 16, the RBI intervence

July 18	13	14.50	10	12.50	88.37	13.16
1996						
July 3	67	896.15	37	637 15	88.60	12.87
July 17	143	1529.03	101	1063.50	88.80	12.61
July 31	28	375.16	6	91.89	88.8	12.61

in the spot market and tried to prevent the rupee from crossing the limit of Rs 36 a dollar. Nevertheless, the rupee stood depreciated by about 5 per cent since early July to touch Rs 35.79 on July 26.

During July, the RBI generally took a strong stance of buying spot dollars in view of the inadequacy of present level of forex against mounting import payments and heavy debt amortisation. At the same time, it also attempted to bring the forward premia down (Graph C). Its intervention thus was two-pronged—spot and forward market. On easy days in fact, it was even seen buying spot and selling forward so as to dampen the forwards without dipping into reserves. This resulted in some amount of roll over of the swap liabilities it had undertaken in February this year to curb the speculative activity then.

At the policy level, in order to reduce speculation and volatility in forward premia, RBI banned partial cancellation of forward contracts. However, it is reported that the corporates have attempted to bypass the ban by adopting certain devices. The forward premia generally remained firm till the end of July. A still more important policy change relates to the facility provided to corporates on their ECBs to hedge against exchange risk by entering into swaps, caps, futures and options in any foreign currency.

III Primary Market

Government Securities

Given the high market borrowing targets and the heavy dependence on ad hocs throughout the current fiscal, the government, on an average, came to the market once every fortnight. In addition to collecting the second installment of the partly-paid security

issued in June, the government came with fresh paper twice during July. It raised Rs 3,000 crore through a four-year ZCB on July 12 and a further Rs 2,000 crore through a two-year paper on July 30. Interestingly, despite oversubscription on both these occasions, the RBI was unable to effect a downward push to the yield rate. In fact, on both occasions, it cut off the coupon at higher prices than those offered last year and those expected by the market. While the market expected a cut-off of 13.60-13.62 per cent coupon on zero coupon bond, the RBI fixed the coupon at 13 72 per cent; similarly the yield on two-year paper was fixed at 13.62 per cent against the expected yield of 13.50-13.55 per cent and that offered at 13.50 per cent last year for a similar maturity. Besides being indicative of the liquidity perception of the market, the higher cut-off reflected the reluctance of the market to invest in dated government paper. In order that they do not have to buy the security, many players in the market bid up the price expecting the RBI to cut off the price at a lower level. The RBI, whose choice in cutting off at a lower rate is limited by the high net RBI credit to the government and is also by the bids received, has to per force decide on a higher cut-off. As a result, there is some aberration in the primary yield curve too. While the government paid 13.85 per cent for 10-year paper only in June, it had to pay 13.72 per cent on a four year paper and 13.62 per cent on two-year paper. The real yield on government securities have turned to be unusually high (Table 3).

91-day Treasury Bills

The auctions of 91-day TBs received overwhelming response from the investors as the government comfortably raised Rs

2,000 crore in the four auctions of July. The availability of funds in the system was evident in these auctions throughout the month with the rising number and amount of bids received and a sharply falling yield on this paper (Table 4). Rather than hike the notified amount of Rs 500 crore to mobilise larger resources at rates lower than that being offered on longdated securities, the RBI decided to lower the yield. The yield on 91-day TBs fell sharply from 12.41 per cent as at the end of June to 9.06 per cent in the auction held on August 2. On July 12, the yield on primary 91-day TBs touched single-digit level after 24 months (Graph D). The number of competitive bids received each time was in the vicinity of Rs 2.000-2.500 crore showing a phenomenal appetite for this paper in the market. Noncompetitive bids though small in number were significant in terms of amounts. This was the natural fall-out of the money raised by the states from the market in May. Uncertainty about the liquidity situation in the near future, prompted banks to enlarge their short-term portfolio. Moreover, with the PDs probably agreeing to share their commission. the banks evinced considerable interest intreasury bills auctions.

364-day Treasury Bills

The 364-day TBs also received generous response. In three auctions held during July the total bids received were to the tune of Rs 2,800 crore. The government collected Rs 1,793 crore. From 12.94 per cent yield paid in the last auction of June, the yield on this paper came down to 12.6 per cent in July Interestingly, however, the response to this paper saw drastic fall in the last auction held in July. From 143 bids received for Rs 1,529 crore in the auction held on July 17, the response fell to only 28 bids for Rs 375 crore

(-) means no trading YTM = Yield to maturity in percentage per annum CY = Current yield in per cent per annum * Yield rates of these sub-groups of t-bills and dated securities have been used for the graphs.

Notes: 1) Yields are weighted yields, weighted by the amounts of each transaction 2) Current yield has not been worked out for treasury bills.

at the auction held on July 31 The RBI was thus unable to reduce the yield on this paper (Table 5)

Other Instruments

The impact of easy availability of funds was felt on other instruments such as. CP and certificates of deposits (CDs) which saw interest rates falling The demand for CP increased as corporates desired to reduce their cost of funds With banks and FIs lending at high rates corporates found 16 18 per cent funds against this short-term paper advantageous L&T and ACC were reported to have raised funds through CP even at 15 5 percent Dabur and IL&FS also raised funds at 13 5 percent, while Plizer and Voltas were watching the market With rates on call money fallen to 3.5 per cent and TBs to a little over 9 per cent banks found CPs at 12 5-15 per cent an attractive proposition Rates on C Ds too declined from 16 5 per cent to as low as 125 per cent

IV Bond Market

The glut in the bond market continued during July but the attempts suffered a notional slowdown when the budget failed to announce a clarification with regard to ta ability of long term instruments, such as, deep discount bonds (DDBs) The controversy arose atter the CBDT ruling which treated the deterred or accrued income or redemption value of long-term instruments as interest income rather than capital gains which would attract tax at a lower rate of 20 per cent. The four DHs which had issued DDBs in the recent past had approached the Ministry of Finance (MoF) to announce relaxation in this area. The issue has bearing not only on the revenue receipt of the government but also for the development of long term instruments as tax liabilities of savings instruments have a significant say in guiding the investor

The structural misalignment and deficiencies of the debt market came into surface in the sense that despite the improvement in liquidity and decline in rates in some segments of the money market like call money, CPs CDs and PLRs the coupon rates on new issues of bonds continue to be pegged at higher levels. While PSUs are offering rates in the range of 17 to 19 per cent for maturity of 5 years and above, the private sector led by NBFCs offer still higher rates, between 20 to 24 per cent for shorter maturities up to 18 months. Moreover, currently, the debt market is undergoing structural transformation with many innovative characteristics being ascribed to such debt instruments. For example, the current IFCI bond issue offers a variety of options to meet the asset preferences of different strata of investors, with added features of up-front and redemption discount, put and call options, llisting at stock exchanges and collateral for housing loans. Further innovations were added to the debt market when the MoF permitted ICICI and SCICI to go in for (i) self registration which will do away with the delay associated with time and again vetting by SEBI and(ii) on-tap bonds which will help companies to mobilise resources as per availability of liquidity in the system at cheaper rates

V Secondary Market

The easy in liquidity led to an all-round fall in the yield levels in the secondary market in the first week of July. The fall was essentially in the yields on government paper at the shortend with the long end yields remaining virtually unaffected. This was indicative of the market scepticism towards sustainability of the easy liquidity position. Towards the end of July, secondary market trading picked up as banks began to route their bids through PDs. PDs had to offload their purchases for banks through the SGL transactions on the next day.

The short term government securities attracted large demand. As the distinction between the converted and regular securities narrows down due to many of the fresh regular securities engaging reportacility, the trading in regular securities shot up to around Rs 2,000 crore in July as igainst about Rs 392 crore in June. The converted securities also witnessed an increase in trading to Rs 934 crore (Appendix Table) against Rs 246 crore in June.

The secondary market experienced greater activity as the PDs started quoting two way prices of popular gilts, 13.5 per cent 1997–13.5 per cent 1998, and 13.70 per cent 1999.

The gilt edged market, however still lacks technical depth since the price quotations by PDs were not only different from one another but also the difference between the bid and offer prices was quite large. As a result, the market fails to arrive at any fair price and thereby provides ample opportunity for arbitraging Forexample, on July 3 the bid and offer price for 13.5 per cent 1997 stock was quoted by DFHI as Rs 100 70 and Rs 100 85 the difference being very large at 15 basis points. The price quotation by STC1 was Rs 100 83 and Rs 100 88 respectively. Between the two, the bid price by STCI and offer price by DFHI were better than their other respective prices But the actual trading as reported in SGL took place between Rs 100 17 and Rs 100 60 which capost provided large opportunities of exploiting the prices quoted by DHHI and STCI the arbitrage profit could have been to the extent of almost 60 basis points. Similarly, on July 17, for the same stock, the bid and offer price quotations by DFHI was at Rs 101 80 and Rs 102 00, by SBI Gilts at Rs 102 08 and Rs 102 15 and by GSTCL at Rs 102 05 and Rs 102 12 respectively. The actual traded prices at SGL ranged between Rs 102 05 and Rs 102 13 The arbitrage opportunity was to the extent of 15 basis points. On July 23, the arbitrage benefits between DFH1 STCI and SGL for the same stock was as large as 120 basis points. The similar scenario was repeated in other securities

CPs and CDs

Secondary market activity in CDs picked up considerably during July The total volume of trading was to the tune of Rs 57.7 crore during

the month (Table 6) This was on account of a large stock of CDs floating in the market and a significant amount of CDs maturing during the month. While some trades took place in CDs of banks over 90 per cent of the trades were in CDs of ICICI and IFCI with seven to nine months maturity. The yields varied in the range of 12-14 per cent.

The CP rates in the secondary market moved downward in tandem with the primary market rates. From around 15 per cent in June the secondary market CP rates declined to 13.5 per cent in mid July. However, the trading in the secondary market was extremely limited only one trade on July 16 worth Rs.5 croice.

Bond

The secondary market in bonds also saw hectic activity with the yields rates receding on the higher side from 14.45 per cent to 14 22 per cent for tax free bonds and from 18 33 per cent to 17 31 per cent for taxable bonds. The trading volume turned out to be almost the same for tax free bonds (Rs 51 42 crore) and taxable bonds (Rs 50 40 crore) during July. Among the papers in which the market saw significant interest were the taxable bonds of NPC maturing in 1996 and tax free bonds of PI C maturing in 1998 Bonds of HUDCO and MINL were also traded. The yield on MTNL bond tell sharply as the seller had exercised put option. The yield on short term bonds showed a declining trend in keeping with the market

Yield Curve

Reflecting easy liquidity and increased market trading the yield curve shifted downward across the maturities. As the yields on the short and medium term papers plummeted with each auction the gap between the prumary and the secondary markets grew wider With large reduction in the 91 day FB yield in various auctions and increase in coupon rates of longer maturity by the RBI the yield curve turned steeper at shorter-end and flattened in medium to long term structure. The yield curve moved very sharply upwards from 91 day paper to 13 50 per cent 1997 and after crossing the hump of 2001 maturity went into-trough for maturity of 2004 to again rise for maturity of 2008 this showing a zig zag movement through the maturity perspective (Graph E) The difference between the yields on 91 day paper and 364 day paper also widened to 3 percentage points which will be unsustainable in the long run. A downward movement in the long term vicids is thus called for but the fact that the central bank did not change the yield in the last auction of 364 day TBs does not auguwell for achieving this correction to the yield curve

[Paramita Debnath and V P Prasanth undertook the background review and statistical compilations for this paper.]

Public Issue of Unsecured, redeemable bonds in the nature of PROMISSORY NOTES AGGREGATING RS. 800 CRORES.

CREDIT RATING: LAAA by ICRA

(This Rating indicates highest safety and a fundamentally strong position. Risk factors are negligible)

Cation - I

Invest Rs 10,000 and receive Rs 10 lakhs after 30 years

Option - II

Invest Rs 5,000 and receive Rs 5 lakhs after 30 years

Invest Rs 5,000 and receive interest at the rate of 16 00% p a for the first 4 . years, 16 25% p a for the · next three years

· Interest payable half yearly Maturity - 7 years

. 3 Rs 6,200 every year for 5 years after a wart period of 9 years

1 Rs 11,500 every year for 5 years after a wart period of 13 years ΛR

2 Rs 8,500 every year for 5 years after a wart period of 11 years OR

Invest Rs 5,000 in the main bond and

receive your investment back after 5 years

plus

receive two gift bonds which can be encashed for Rs 50,000 after 15 years from the date of issue of the gift bonds

Invest Rs 6000 and receive

- 1 investment back at the end of a wart period of 13 years and Rs 8,400 every year for 9 years subsequently OR
- 2 Investment back at the end of a wait period of 10 years and Rs 4,800 every year for 9 years subsequently OR
- 3 investment back at the end of a wart penod of 8 years and Rs 3,200 every year for 9 years subsequently

SPECIAL FEATURES

- Anytime liquidity Individual Bondholder can encash the bonds upto any amount at any time after one year at a yield of 13% p.a. from the deemed date of allotment
- Insurance cover: Group personal accident insurance policy offered in prospectus is withdrawn at the instance of SEBI Investors may please note
- are entitled to receive, free of cost, one Loyalty Bond having a face value of Rs. 500 redeemable at par at the end of 10 years, for every family bond allotted, while in the case of Millionaire Bond (Option I), two Loyalty Bonds shall be issued
- Loen against bonds Bondholders can avail loan against security of the bonds from specified banks/ institutions
- Put & Call Option available at specified dates & amounts

RISK FACTORS

The present issue of the Bonds carnes the following normal risks associated with the activities of a Development Financial Institution

- Project Risk: Projects financed by the Company may encounter delays in implementation, overruns and in a few cases failures as well
- . Interest Rate Risk: The Company may have a mismatch in maturity between its interest sensitive assets and liabilities which may expose the Company to interest
- Competition for Business. With liberalisation and increasing disintermediation of the financial sector, the Company may face increased competition
- . Competition for Resources: Due to non-availability of funds through Government guaranteed bonds the Company is meeting its resource requirement from various commercial sources including the capital market, in competition with the other public and private sector organisations

PUBLIC TRUST SECURITY

we been approved as "Public Security" by the State Governments of Maherushtra, Gujaret and Rejecthon in addition in in under,the indian Trusts Act which is applicable to the remaining status mount (Madinya Pendash.

UTTAR PRADESH

Revival of Old Political Alignments

Amaresh Misra

Just when the dalits appeared close to reaching out to power, the BSP has, through its alliance with the Congress, revived the very alignment which the dalits had sought to shed. On the other hand, the SP and the Janata Dal, after the failure of the attempt to put together an anti-BJP front including the Congress, are reverting to the old oppositional grouping of the backward castes with the thakurs and jats

WITH the flagging off of Janata Dal's Kisan Mazdooi rallies from Muzatfarnagar by prime minister Deve Gowda and the burgeoning conflict over the Ramesh Chandra report indicting defence minister Mulayam Singh Yadav for the infamous Guest House incident' of 1995, followed by rallies and conventions by the Samajwadi Party and the BSP in I ucknow the countdown to the crucial assembly elections of UP has begun The elections have already acquired a truly national relevance as they will hold a mirror to the post general election scenario with its changed political equations and new social alignments. The BJP has linked its outcome with the very tate of the United Front government whereas the latter has done the same as regards the BJP For the Congress it marks a unique comeback opportunity while for the BSP it offers the decisive opportunity to capture power

The most significant happening in the run up to the elections has of course been the much publicised Congress-BSP alliance If anything reflects in concrete terms the changed nature of post-election equations, it is the coming together of these forces which marks a completion of a certain type of political cycle. The BSP had started 10 years ago as a peripheral party basing itself on a vote bank which despite its strength (dalits constitute about 24 per cent of the electorate in UP compared to 14 per cent in Bihar) had never made its presence felt as an independent political force Dalits were then regarded as the mainstay of the Congress - an essential part of the combination of brahmins, Muslims and other minor groups By the late 80s and the early 90s the BSP was able to wean away the dalits from the Congress and make a major dent in its traditional support base. However, it still did not emerge as the axis of the new social forces Their reins were held by the assertive political articulators of 'mandal', banking on the might of the dominant amongst the backwards In 1993, despite the fact that it was the dalit assertion which made possible

the unprecedented SP-BSP victory, the leadership, in the new equation of yadav Muslims and dalits was very much in the hands of the backwards

The post-1993 situation saw the splitting of the mandal phenomena, the split amongst the backwards and the emerging conflict between the dalits and the backwards. It was highlighted by a number of dramatic episodes leading to the rupture between the SP and the BSP. The 1996 elections then saw a different phenomenon the polling by the BSP of 20 per cent vote and the reduction or stagnation of SP's share. In 1996, the dalits emerged not only as an independent social force but became, crucially, the axis around which a tuture anti 'savarna' pole ought to revolve This was truly the post mandal phenomenon which entailed both the coloption of a large section of the backwards in the status quo and the increasing question mark over the validity of erstwhile 'caste' politics

The BSP Congress illiance thus sums up a phase of mandal politics. On the other hand, it marks the beginning of a new phase of Congress style ruling class politics this time with a more prominent, perhaps a leading, role for dalit power brokers. It is significant that caste-based centrist oppositional liberal politics ultimately led the way for a resurrection of ruling classcentrist politics it is also significant and ironical that at the moment when the dalits appear close to reaching power their principal political representative is reviving the same social equation from which they had departed at first. The BSP is banking on the game-plan of attracting the brahmins -it has advised the Congress to field as many brahmins as possible - and then to involve the Muslims in the alliance

This new alignment, whether or not it succeeds in its fullest measure, marks a unity of antagonistic caste forces which in turn tantamounts to creating a new class equation in UP Already, the BSP has started appearing in new colours – a remarkable feature of its recent posturings has been a virtual absence

of focus on the issues of the dalits and exclusive concentration on Mulayam Singh much more than the BJP as the target of article.

But reflections of the new reality are not limited to the Congress or the BSP. In fact Mulayam was himself keen on in alli ince with the Congress and even now that inted Front despite its decision, go it alone, after the prospects of a broad anti BJP alli ince involving the Congress BSP Janata Dal the Samajwadi Party CPI and CPI(M) failed predictably due to the inimosity between BSP and Mulayam does not appear serious enough for building a real. Third I ront without the Congress. Going it along is more of a compulsion and Mulayam has been prudent enough to direct his ire at the BSP away from the Congress Morcovci Muliyim is fast losing his lustre and his reputation has got further sulfied following the findings of the Ramesh Chandi report blanning him personally for the criminal act of intimidating Mayavati when the BSP decided to break rinks with the SP last year. He has yet to define any credible issue for the elections and it seems indeed that the former chief minister is fighting for his political survival on his home turf. The Janata Dal as well as the CPI(M) are keeping their options open and a further alignment of all anti-BJP' forces under the leadership of the Congress and the BSP before or even after the elections with or without Mulayam cannot be ruled out. The appointment of Romesh Bhandari, overriding the objections of the CPI was done explicitly to please the Congress and the governor is leaving no stone unturned to act like a partisan politician in the interests of party

As regards the social base yadays are with Mulayam and Muslims too have not moved away from him. But their unbivalence is a cause of great discomfiture and if they decide to throw in their lot with the BSP. Mulay im s position will become more precarious. He is opting at present along with the final i Dal for a revival of the old opposit analplank something which included thak its and jats as well apart from the backwards This has become imperative following the failure to strike an alliance with the Congress though its posturings are as yet cosmetic excluding a focus on anti-Congressism which was the mainstay of the old oppositional politics. Even then it is a recognition of the post mandal phase and ireturn to the centrist politics of yore just as there is in attempt to a return to the Congress politics of yore by the BSP

This has brought in its own secularisation—the United Front is raising farmers—issues whereas BSP is trying its best to sell itself to the upper castes. It is not to nothing that

the BJP is finding it hard to surge ahead with its campaign material - it has the option to either go back to the mandir plank or to evolve a modern, right wing political coali tion The anti BJP tendencies which are under way are liable to make a severe dent in its 'savarna -mandir equation based on the unity of the upper castes and the jats. If there is even a slight shift of the thakurs and the jats towards the revival of the pre-mandal, AJGAR politics Ajit Singh has recently issued statements favouring closeness with the United Front - it would mean a setback to its contention for power Conversely, what may favour it is the very process of post mandalism and post-mandirism - a right wing polarisation cutting across upper and backward caste lines, even while remaining tinged with an upper caste-mandir-communal flavour, against the type of social forces represented by the UF and the Congress BSP alliance The BJP will also be helped by the division of votes of its opponents although the picture on this score will be clear only by early September

In this fight between various shades of centrism and the right the left has two options - either to get subsumed once again by the centrist-liberal opposition led by Mulayam Singh or to become an independent third pole after centrism and right wingism. The

reality is that even if the BJP is unable to come to power, there is a threat of centrist authoritarianism emerging, carrying the stamp of the Congress with or without the active support of the party Centrist liberalism as represented by the Janata Dal and the Samaiwadi Party is weak and is itself liable to split, in the long run, along two distinct lines one moving towards the centristauthoritarian camp and even assuming its leadership and the other towards an alter native liberal left form of politics. The left, if it manages to keep the independent pole intact, is liable to attract this section in the next phase of re-alignment

The left's one great problem, however, is the BSP and the challenge to wean away the dalits from the centrist-authoritarian camp The aspirations aroused by the BSP cannot be fulfilled in the present framework of even liberal centrism leave alone its conservative variety. So the scope for raising and leading struggles on the economic issues of the dalits like land reforms, minimum wages and the issue of social respect will always remain But this is clearly not enough. The issue which has emerged in UP is a more fundamental one - that of 'power, plain and simple The BSP has got linked with dalit aspirations for power which in politics often overrides economic concerns. The fact is

that all left formations are no longer contenders for power - the CPI and the CPI(M) for they have wilfully handed over the reins of mainstream politics to the centristliberal camp and the CPI(ML) for it is a recent player in parliamentary politics. The CPI(ML) has been among the first to recognise the phenomenon of dalits sympathising with the left in economic struggles but voting for the BSP in elections

Somewhere along the way, the left has either become tailist or grass rootist, caught in the vicious web of isolated struggles. Both these tendencies, represented by its liberal and radical streams, have led to a whittling down of the 'political perspective', of linking parliamentary and grass roots struggles with the question of independent 'power' It is this factor which has emerged as a gnawing chasm between the theory and practice of the left, between intentions and poor electoral or overall political performance. Here, the, CPI(M) and the CPI offer little hope, but the CPI(ML) has come out with theoretical posers aimed at linking the question of power, intervention from above and other parlia mentary initiatives with struggles on land and other issues. The flow of cadres from the CPI and the CPI(M) is continuing and the CPI(ML) has decided to contest about 50 seats in the forthcoming elections

MADRAS

Politics of Cogentrix

Muzaffar Assadi

The main actors in the agitation against the Cogentrix project are the local indigenous capitalists and commercial interests because the project poses a threat to the local industries, hotels, canning units, fisheries and dairies. Environmentalists have provided the required legitimacy to the agitation.

WITH the expulsion of Maneka Gandhi on July 4, 1996 from the Janata Dal/United Front the Cogentrix issue has once again become the focus of controversy. Maneka's first objections to the project surfaced with the disclosure that Deve Gowda, the prime minister, had allegedly received kickbacks from Cogentrix. The manner in which he had cleared the Cogentrix project also came in for severe criticisms both from Maneka Gandhi and opposition parties in parliament. Meanwhile the PM denied that he had cleared the project, but the submission of the Karnataka chief minister that he had signed a power purchase agreement(PPA) shows that either the PM or the CM has bungled the issue. Environmentalists, however, have received a set back with the exit of Maneka Gandhi, although her exit was a foregone conclusion when the United Front formed a government with the external help of Congress. The UF knew clearly too that Maneka would be something of an obstacle to liberalisation policies enunciated by the earlier Congress government. Her exit was essential both for the survival of the UF government and for the MNCs/western capitalism entering India. Many who supported her expulsion had forgotten the fact that now the indigenous/regional and commercial capitalism also lost an ally in government. Nonetheless, controversy centring around Cogentrix is not a new one. Last year the Karnataka CM had threatened that he would call off the project if the union government did not gives clearance at the earliest. Once again controversy arose when an upright bureaucrat was eased out for voicing an opinion against Cogentrix project. In addition, the invitation extended to Cogentrix to take over NTPC managed thermal project in Mangalore without formally inviting global tender, especially when the latter called off the project after the collapse of the Soviet Union, also came in for severe criticism.

Cogentrix is a US-based 'unlimited liability company', as it defines itself, which entered India when Cogentrix signed an MoU in 1992 with Karnataka for the production and supply of thermal power by reviving the defunct Mangalore Power

Corporation (managed by NTPC) in Nandikur, 40 km north of Mangalore, in Dakshina Kannada district. The thermal project is expected to generate 1,000 MW at an estimated cost of Rs 3,948.35 crore tearlier estimate was Rs 4,387.48 crore). The PPA states:

(i) The first phase shall consist of two nominal 250 MW (gross)/230 MW (net) generating units with an aggregate electrical capacity of approximately 500 MW (gross)/460 MW 9 (net) with coal fired boilers and (n) the second phase shall consist of two nominal M 250 MW (gross)/230 (net) generating units with an aggregate electrical capacity of approximately 500 MW (gross)/460 (net) with coal fired boilers.

Mangalore, for that matter Dakshina Kannada district, although emerging as a new centre of, and for, metropolitan/western capitalism, is historically known for tranquility except for occassional anti-colonial struggles carried on by the peasants. The first 'struggle' in recorded history was in 1800 when colonialists imposed new forms of exchange/modes of production on the existing one and peasants resisted by migrating en masse to other places. Similarly, in 1830 once again anti-colonial struggle broke out which almost overthrew the colonial forces. However, until the nationalist struggle the district was marked by dualist and uneven development - a layer of modernity or capitalism emerging with the emerging feudalism at the periphery. The establishment of missionery schools, colleges, railway tracks created a category of population submitting themselves to colonialists without reservations. This kind of passivity remained for a long time, even during post-colonial period. The periphery was simmering with discontent which surfaced during post-colonial period, initially in the form of land grab movements, and, later on, in the form of pitched battles for 'land to the tiller'. However, the Land Reforms Amendment Act of 1970s took away the zeal of agitational politics as it made large number of tenants owners of the lands they tilled. It is these lands, once tilled for feudal landlords and later on owned, which came under severe threat when National Thermal Power Corporation

(NTPC) planned to construct a thermal project in and around Nandikur, near Mangalon This is the reason for the initial struggles of 1980s in the thermal project area which were led by former tenants-turned-landowners Neither environmentalists nor indigenous regional or commercial capitalists extended their support. During their struggles, although some specific issues such as flying ash ponds, water scarcity, etc. were raised, they did not dominate the agenda. Interestingly the leadership in the agitation also came from dalits espousing Marxism-Leninism. Their failure to carry the agitations to their logical end was largely due to strategic mistakes they committed in picking up the wrong contradictions. The primary contradiction was not after all western capitalism/ multinationals, rather the NTPC, a national corporation. Their struggle was perceived, and thereby treated, by local/indigenous capitalism as an isolated and local affair. Further, during this time commercial capitalism did not perceive a threat from MNCs.

Environmentalists would not have entered the fray against the Cogentrix Thermal project except for the spate of industries coming up in the coastal belt of Dakshina Kannada. Nearly 37 industries are coming up with a total capital of Rs 35,000 crore, spreading in a radius of 60 km. Their involvement was also provoked by the fact that multinationals or western capitalism would pose a challenge to indigenous/local capitalism including commercial capitalism. "It is not the thermal project as such that they are concerned about, but subsidiary units that they are bringing along with their capitalism such as banking, steel industry, mass media, five star hotels, fast foods, and hospitals which are posing a real threat to this commercial capitalism of Dakshina Kannada", says Athaulla, a local resident of Shirva. This particular argument is not untenable as some of the environmentalists are employees and sympathisers of such commercial/local capitalism as banking, hospitals, media, hotels, canning, fisheries, steel, and dairy. Therefore, the ongoing agitation against Cogentrix in particular and other industries in general should be viewed in terms of the emerging contradiction between local/ indigenous commercial capitalism on the one hand and western/multinationals on the other. Environmentalists, however, provided the required legitimacy for the latter's claims.

However, out of 37 industries that are coming up in Dakshina Kannada only four industries, including Cogentrix have become the main targets of environmentalists: Usha Ispat, Nagarjuna Steel Industry and Mangalore Refineries Usha Ispat, a multicrore steel industry is coming up in Brahmavar, 20 km north of Udupi.

Nagarjuna is another industry coming up near Cogentrix project. Mangalore Refineries (MRPL), another mega project headed by the Birla group is almost complete in Panambur, 25 km north of Mangalore. Apparently in these agitations issues have centred around the following: ecological imbalances, displacement of local people, distruction of fisheries, acid rain, discharge of effluent, rehabilitation of displaced, cultural crisis and water scarcity. On the issue of discharge of effluents, Dakshina Kannada for the first time observed a bundh, rasta rokos, courting arrest and the destruction of pipelines. One party worker, belonging to a rightist party also succumbed to police firing. This agitation snowballed into a communal conflict between fishermen belonging to mogaveeras and the dominant castes. In between the famous mutts of Udupi also intervened in the agitation, not with any genuine concern for the public but with the larger design of protecting temple lands in the vicinity of Palimar and other areas where the Nagarjuna Company is planning to establish its industries.

While giving the contract to Cogentrix the underlying emphasis was that the thermal project would help Karnataka to overcome the power crisis without acknowledging the fact that the state has not been able to fully utilise existing installed capacity. The Karnataka State Electricity Board has not been able to cope with the loss of energy (mostly by theft) in transmission. (In fact the loss of energy in transmission has increased from 2931 MU in 1991-92 to 3209 MU in 1993-94). This could have solved the problem to some extent especially in addition to going in for mini hydel projects and making use of alternative energies. Interestingly, even as the Board defends unscheduled power cuts in recent days on the grounds of incurring losses, statistics show something else - the Board earned a record profit of Rs 3,387 lakh in 1993-94 as compared to a net profit of Rs 3,221 lakh in 1992-93. Meanwhile the state government has sanctioned 14 private sector power projects with an investment of Rs 30,000 crore to generate 55,000 MW

Nonetheless, Cogentrix is favoured inmore than one way. Firstly, 100 per cent taxable profit of the company has been exempted from income tax for five years beginning from the year of commercial operation; the stamptax on purchase of immovable property has been waived for the company, similar is the case for registration fees for movable property Further, property tax including tax on land and buildings, sanitary tax, lighting tax and water supply tax as levied by the local authorities are "being treated as waived". Even entry tax and other local taxes are being treated as "exempted" including excise duty on construction

contract. Finally research and development cess has been waived "on the assumption that there will be no payments made for the import of technology". All these mean heavy concessions at the cost of taxpayers. Awarding tax holidays despite the taxable profit would mean that large amounts of profit may be siphoned off from India to western world, principally the US. Further, in the US, Cogentrix has taken into account 4 per cent annual inflation but Indian inflation is counted at 10 per cent per annum. This would mean inflated cost of output, mainly electricity, and a stagnated cost of inputs. This would, when it is translated into monetary form, absolutely squeeze the Indian economy in general, different categories in particula:

Meanwhile an argument has also been advanced that the cost per unit of Cogentrix electricity power will come down from Rs 2.59 per unit to Rs 2.40 per unit and that, in the longer term price will settle down to Rs 1 after 20 years as the capital cost will be loaded in the beginning. This particular argument is untenable in the context of the fact that the contract is renewable every year. Since the contract is linked to prevailing dollar rates (or equivalent to Indian rupees). it is obvious that, given the sliding rupee value in the international market, power purchase will become costlier and that Indians will have to pay heavy price for inviting MNCs in the years to come. Further, the collection of fixed charges by the company "in connection with the development. financing, design, construction, operation, maintenance of the facility" will also be slapped initially on KEB, and later the same will be passed on to the consumers. This will have multiple consequences: increasing cost of all essential commodities, increasing the cost and prices of industrial goods in the context of the declining purchasing power of the people. Most affected in this context would be the middle class in the urban areas and the peasants/farmers in the rural areas.

One of the serious aspects of Cogentrix project is the fact that the company will not be taxed in the event of it 'harming the environment' This is clear in the power purchase agreement between KEB and Cogentrix: "It is assumed that there is not and will not be any tax which is charged, levied or imposed whether directly or indirectly in connection with harm to the environment". The latter is understood in terms of "actual or potential adverse effects on the environment or living organisms (including man) and includes changes in climatic conditions or other natural physical systems or functions in the world or any part thereof, harm to the health of living organisms (including man, animal and plant life) or other interference with the ecological systems. "This particular clause makes a

emockery of our environment including man and nature. Attempting to include such clauses in the agreement is not new for MNCs. Du pont in Goa earlier tried, only to beat a hasty retreat due to pressure from below. Union Carbide is another classic case which went scot-free despite causing damage to human beings and the ecology.

There are other clauses which are heavily tilted towards Cogentrix: clause of "indemnify and hold harmless the company arising by reason of bodily injury, death or damages to property"; entitling foreign shareholders a return of 16 per cent every year; the arbitration in the UK, purchasing lands or site on terms satisfying to the company, not withholding the consent for fuel purchase (even if it means more acidic content), withholding the right of Indian legal authority or board to suspend or terminate the suspension or shut down any part of facility other than in accordance with the agreement and finally purchasing power round the year despite the capacity for indigenous production.

Cogentrix is already silently affecting the local economy in more than one way. Of late land prices in the vicinity of the project area have shot up. Between 1992 and 1996 the prices increased tenfold. For example, in a neighbouring village like Shirva, one cent of land earlier cost Rs 10,000 and the same has increased to Rs 1,00,000 (rates of Rs 3,00,000 per cent are not unheard of). At the same time a group of speculators has emerged, who are doing roaring business in real estate. These speculators are local people, but interestingly, these lands are being purchased by NRIs whose roots are in the same area. These NRIs are made to shell out large amounts of hard earned money without being provided with the knowledge of the ecological consequences that the Cogentrix will have on their social existence.

In addition, fear is being expressed by the local people that the recently introduced Land Reforms Amendment Act will decisively go against the interest of local people, and thereby help the big industries in general and Cogentrix in particular. The recently introduced act has certain new features. It has added a new dimension to the concept of agriculture - acquaculture is clubbed with agriculture; leasing out land for 20 years has been allowed; ceilings on lands have been extended, certain lands have been exempted from the purview of alienation and people with two lakh rupces have been allowed to buy the lands. However, the most dangerous aspect of the act is related to section 109. A new sub-section has been inserted which has given the government a free hand to "exempt to any extent land for any specific purpose". Since the 'specific purpose' is ambiguous,2 anyone who has the capacity to influence the government or the party in power including the multinationals or NRIs can get over the prescribed land ceiling. This would have far reaching consequences: displacement of categories, alienation of land, exodus to urban areas cultural crises and cultural suppression. Presently Cogentrix has earmarked 1,000 acres of land, south of the national highway for accommodating the plants and the ash disposal. However, there is no guarantee that the company will not want to expand in the years to come.

Though there is no dominant crop worth the name in the immediate vicinity of Cogentrix, there is a small group of flouriculturists between Kinnigoli and Katpadi. These flouriculturists grow jasmine flower or what is popularly called 'Shankarapura da mallige', which links the local market with metropolitan or even sometimes the international market. These jasmine flowers are grown in small patches of land and have sustained hundreds of families a large chunk of whose income is derived from this activity. This flower cultivation is now under threat.

Interestingly, the Konkan Railway track is passing through the periphery of the Cogentrix project. Unlike in Goa where the Konkan Railway faced a lot of resistance from the local population for reasons that it would disturb the ecology, culture, demographic patterns, etc, similar claims were not made in Mangalore. Besides, in Goathe Konkan Railway represented a binary concept representing nationalism or nationalist spirit on the one hand, anti-nationalism or anti-nationalist spirit on the other. Although in Goa these concepts were ultimately used and were appropriated for the political purpose, there was one general agreement among the population that the identity of community should be retained or protected at any cost. This trend is absent in Dakshina Kannada. The Konkan Railway received much acclaim both from commercial/local capitalism and the environmentalists. Both saw the Konkan Railway as a cheap communication system, linking the local market/economy with the metropolitan market/economy. Here lies the duplicity of environmentalists. Most of the resistance against Cogentrix all these days has been confined to the villages near National Highway 17. Resistance has hardly filtered down to the interiors. Villages like Mudarangadi, Pernal, Belman, Manchakal, Shirva, Bantakal, Kuthyar, Subashnagar and Kurkal have remained free from environmentalist led movements except for observing bundh only once. These villages are very rich - most of the richness being derived from west Asia and partly from Bombay. Richness can be gauged from the number of banks operating in these villages. A village like Shirva, for example, has seven nationalised banks and seven non-banking financial institutions. At the same time there is a marked absence of rural contradictions between the categories (this is partly due to land reforms of 1970s and partly due to incomes from west Asia). Therefore a village like Pilar which will be losing its protected 'khanas' or forest land of 1,000 hectares in the event of acid rains, is observing a discreet silence. Environmentalists are doing little to create a new consciousness against the Cogentrix in this particular area.

This silence has much to do with the contradictions than real concerns. The primacy of the contradiction although projected as one between masses on the one

hand and Cogentrix on the other, is really different. It is between commercial/local/regional capitalism and western capitalism. This particular position, while opposing neo-colonialism, may well trap environmentalists in the larger framework of the new Hindutva and Maneka Gandhi will be no exception.

Attack on Syncretic Culture

Case of Haji Malang

Asad Bin Saif

Shiv Sena's campaign to rename Haji Malang, the shrine of a sufi saint, as Sri Malang, is a diabolical attempt to disrupt the syncretic traditions through communal propaganda.

A CAMPAIGN, known as 'Malang Mukti Andolan', has been launched since 1982 by Anand Dighe, Shiv Sena chief of Thane district. Since then he has been mobilising his followers, the Shiv Sainiks, to demonstrate every year during the 'urs' which falls on Magh Purnima (according to the Hindu calendar, and this year it was in the Ramdan month). According to Dighe, Haji Malang is the 'samadhı' of Macchindranath, heir of saint Adinath, and hence the shrine must be handed over to the Hindus. With the increasing clout of Shiv Sena, this campaign has been gaining momentum. Earlier - years before Sena-BJP government came to power - the state government enforced heavy bandobast on the day of the urs to protect the shrine from being taken over by the Shiv Sena. This year (1996), with the coalition government of Sena-BJP in power, it was easier for the Shiv Sena as chief minister Manohar Joshi, along with Uddhav Thackeray, Shabbir Sheikh and Ganesh Naik visited the shrine and offered 'Ganapati Aarti'. In fact, the chief minister was planning to rename the shrine then but backtracked due to a court case.

The Hindutva offensive has been a multipronged one. It claims over 2,000 mosques on the ground that earlier these were temples which have been converted into mosques during the Muslim rule. Haji Malang is situated on the hilltop of Malangarh, nearly 11 km from Kalyan station. The site is a small fort at a height of around 700 feet from ground level. It takes nearly three hours to climb up to the fort but takes longer during urs. During our visit we noted some freshly demarcated plots with new boards and 'Shri Malang' written on them. Shakuntala Patkar. a devotee, says, "We people only know it as Haji Malang.. It is wrong to go for such renaming, which is certain to hurt the sentiments of His devotees who belong to all communities". All the houses on either side of the road have pictures of the Haji Malang shrine, and it was difficult to distinguish whether it was a Muslim or a Hindu house. Later, we met at the foothill John Devashi, a Christian from Cochin, with a military background. He told us, "I stay here because I was afflicted with a serious disease and was cured only due to the blessings of the Baba". On being asked what was his opinion on the renaming, he said, "I am greatly perturbed by the antics of Shiv Sena to bring the holy shrine in the circle of controversy".

While climbing up, we spotted 'Medical Darvesh Trust' on which symbols of Allah and Om were engraved. The trust is run by a Hindu doctor in the memory of his Murshid Sufi Fakr, Gullumullah Laghan from Hyderabad (Sind, west Pakistan). This indicates that Sufism has transcended all barriers among human beings of different countries Further on the journey, there are two 'mazars' which are said to be shrines of Haji Malang's disciples. We also met the hereditary trustee or 'mojabai' (who serves

the mazar), Kashinath Gopal Ketkar, a brahmin. From the way he was talking and receiving the people, it was obvious that he has adopted the Muslim way of life out of devotion. He, too, was greatly perturbed by the on-going controversy over the renaming of the shrine. He asserted, "They don't have any sort of proof, either documentary or whatsoever". He stated, "the presence of Muslims is declining during urs because of the controversy but people come on other days throughout the year". Regarding the renaming he remarked, "I don't like it and I am rather pained to see such things being fomented. It is beyond doubt that the shrine belongs to Muslim sufis, but his devotees cut across all the communities. People of 40 villages around the hill will continue to say Haji Malang because they have deep rooted devotion for the shrine, but those with mischievous intention will say whatever suits them." The hereditary trustee mentioned, "Our aim is to provide good services to his devotees without any discrimination. We are going to open a secular institute which could give appropriate education. Each and every household of brahmins in Pune worships the statue of Junglee Maharaj who was a Muslim Fakir".

An Irani florist Asghar Ali, says, "I am really anguished the way the chauvinistic forces have been picking up issues and holding at ransom the peace and tranquillity of the country. We are still struggling to come out of the lacerated psyche inflicted upon us due to the demolition of the mosque by these communalist forces." Another devotee, Dattaray Sawant, who had come all the way from Lalbaugh, Mumbai, said, "it is really unfortunate that issues like this are being given precedence over so many problems which deserve to be given adequate attention. I don't like this. It's wrong to support this."

The aforementioned views expressed by the people are corroborated by the Thane district gazetteer (1982 revised edition) which says, "The tomb is one of Hair Abdul Rehman an Arab missionary, who is said to have died 800 years ago. The oldest name connected with Malanggadh is that of Nala Raja, who is said to have lived on the hill, 800 years ago. During his reign, Haji Abdul Rahman arrived on the hill along with his followers. To test his sanctity, Nala Raja sent his beautiful daughter to the saint. Haji passed the test. Convinced of his virtue, the king gave his daughter to him in marriage. Her tomb lies next to his at the shrine '

The gazetteer further states that "It is believed that the five tombs at the other end of dargah are called five pirs and are said to be of the tive disciples of Haji Malang. In 1780, the British made their advent on the hill with colonel Hartley from Bombay

and captain Jameson from Kalyan, and defeated the Marathas who had their garrison at the fort. However, they left the place after two years and Marathas gained the control again. As a thanksgiving gesture, the Peshwas sent to the shrine cloth of gold, trimmed with pearls and supported in silver pots. However, neither the cloth nor the pots are found on the tomb now. This gift was brought in a state of procession under the charge of one 'Kashinath Pant Ketkar', a brahmin from Kalyan. The present hereditary trustee is a descendant of the same family".

The gazetteer continues, "in 1817, Kalyan Mussalmans headed by one Hydad, the hereditary guardian of the tomb, did not acquiesce with brahmin management of the shrine and laid a claim to the management with the district collector Thane. That was decided by casting the lots and Ketkar emerged victorious. Ketkar was declared the guardian. Recently, the Supreme Court has also ordered that the management should remain hereditary."

There is also a widely available book written in Hindi by K Babarao Ketkar, entitled Baba Haji Malang. Nowhere does the book mention 'Shri Malang' The book narrates that when the Baba needed water for ablutions necessary preceding prayer, he did not find water anywhere. Then he struck the surface and showers of water emerged. That place is now called 'chashma' (an Arabic word) and water from it is available to the thirsty. The arrival of Haji Malang is narrated as follows, "The hilltop had been the abode of demon and they were creating havoc with the lives of men. One Abdul Rehman from Arab was sent by Allah to liberate the people from the tyranny of the demon. He came and freed the people from the cruelty of the demon."

An annual urs takes place at the shrine. On the night of urs a procession, 'Baba Kı Palakhi', is taken out. The palanquin is made of 40 kg of silver with inner lining of sandalwood. The palanquin is decorated and carried through midnight and kept for 'darshan' for a couple of hours. Traditionally, the Ketkar family performs the rituals. But there are different people chipping in at different functions, e g, decoration by the Khan family, sandalwood decoration by the Attar family from Kalyan. The palanquin is carried by the Koli family and Milad readings from the Holy Ouran are by the Patel family. A place of honour is given to cunuchs in this procession. According to Ketkar, the offering; given at the shrine are a mixture of Hindu and Muslim traditions. Devotees offer chaddars, coconuts, flowers, and sheets of flowers.

The essence of sufism is to seek spiritual solace through altruistic love and serve humanity at large without any discrimination. It inculcates propriety in relations towards

fellow beings. Sufism has proved an immense cementing factor for the diverse society. Most of the sufis fought against the tyranny of all-powerful monarchs and lords. Their mystic morality struck at the root of parochialism, casteism and religious exclusiveness. Their core teaching is 'unity of being' (wahdut-ul-wajud) which is unacceptable to the fundamentalist.

Sufism made Akbar a great secular monarch of the medieval period. The two sufi brothers, Faiji and Abul Fazal, helped Akbar in his secular approach and Sulh-e-Kul (harmony for all) became Akbar's ethic of rule. A quartet inscribed in a house at the foothill of Haji Malang, tells the essence of sufism:

Kisi dardmand ke kam aa
Kisi doobte ko ucchal de
Ye nigahan maast ki mastiyan
Kisi badnaseeb pe dat de.
(Come to the rescue of the despondent
Save the life of a drowning man
Your rejuvenating glance
Oh! cast it on the hapless ones)

The last few decades have seen an upper caste Hindutva agenda on the rise, donning the garb of nationalism and subsuming popular sub-cultures under the steamroller of brahminical practices. Hinduism as propagated by Hindutva forces is brahminical orthodoxy, accepting the authority of Vedas and brahmins A big chunk of people, especially the poor, veer towards non-Vedic gods like Vithoba, and follow bhakti cults and Sikhism. Similarly, sufism has come to occupy a social space amongst large numbers of people. The present strategy of Hindutva movement is to propagate 'brahminical hinduism' as the religion of this land. For a Hindu rashtra to come into being, all identities have to be destroyed to create a homogeneous culture. The present attack of Shiv Sena on Haji Malang is one in the chain of such attempts to forcibly destroy syncretic culture and replace it with brahminical culture. But sufism goes against the brahminical ethos. Once a sufi was given scissors. He said instantly, "Why are you giving me scissors. I need a needle because my mission is to sew not to cut."

It is Shiv Sena's intention to extend its influence outside Mumbai and enhance its scope of activity. But given people's faith, the strategy of renaming Haji Malang will not benefit Shiv Sena. The question arises, from whom does the Shiv Sena intend to liberate the shrine: from Ketkar, Joshi or Patel? All these trustees are non-Muslims butthey proclaim Haji Malang to be a Muslim shrine.

[I am thankful to the Centre for Study of Society and Secularism for sponsoring this investigation I thank my colleagues and Pradeep Pachpinde for helping in this work as also P R Ram for helping me in writing this report]

Atlanta: The Corporate Grab Bag

Frederic F Clairmont

What Atlanta highlighted was the war of corporate capital, the war within the corporate Gulag, at its highest levels. The billions of dollars invested in TV time and the billboards point to one conclusion – that the games themselves are the object of massive corporate colonisation.

THE crash of the 28-year-old TWA plane stemming no doubt from the reckless folly of Reaganite deregulation, trailed by the Centennial Park butchery, threw a momentary pall over the glitziest corporate entertainment and advertising bonanza on earth. Stock marketwise, sports is one of the hottest, biggest and fastest growing commodities on the international market, already massively dominated by a mere handful of 10-15 transnational corporations with the Americans leading the pack.

Inthis game, Murdoch and his News Corp, NBC. IBM. Coca Cola/PepsiCo, Reebok, Nike and Adidas rank among the most conspicuous, certainly the most vocal, players. Corporate sponsorship, sports advertising, and sports equipment is an \$ 86 bn dollar market, climbing steadily at 8 per cent yearly. Like drug trafficking and traffickers, it is a unique commodity in that it is liberated momentarily from the caprices of the business cycle

What Atlanta demonstrated, this time on far more savagely prodigious scale, was that Sports Inc., whose basic raw materials is youth, and its massive parasitical corporate appendages is unconcealed war. Wars over a marketable commodity with one of the highest rates of returns. Wars deploying every conceivable gimmick of multi-billion dollar propaganda and advertising technology.

In the lingo of a PepsiCo marketing warrior sports is the global king of commodities, it is already internationalised and transnationalised,, and becoming more so daily. At all levels, Atlanta provided an ignoble case study of the voracity of US national chauvinism so amply manifest by the print, radio and TV media. But it also unmasks, far more so than the mendacious balance sheets of the Fortune 500 could ever do, the gluttonous greed of finance capital in its unceasing frenzy for profit maximisation, via the acquisition of fatter and fatter market shares. No other sector reveals more lucidly the misworkings and decadence of capitalism than Sports Inc with the possible exception of finance and banking.

The gold, silver and bronze medallists are actual or potential commodities to be put on the auction block; they epitomise the breakneck tempo of corporate accumulation:

inventories to be bought, sold, traded, downsized. When the market value stumbles their corporate sponsors indicate, like the victims of Mad Cow's disease, that their time has come to be culled.

All the conditions for the Big Show had been met. In 1936, at the Berlin Olympics, Himmler ordered the gypsies shovelled out of Berlin, subsequently turned to ashes in the crematoria of Nazidom: the grand prelude to the celebration of ethnic cleansing. In Atlanta, the crematoria were absent but the 40,000 homeless, overwhelmingly black, were handed a one-way bus ticket, a couple of dollars, and told to blow, otherwise they would face the music

There was no need for repetition. The homeless knew that the gold medals, in Georgia and indeed the US, goes to the booming penitentiary building sector. Atlanta's purity was also guaranteed by 60,000 security guards joined to thousands of military personnel, but that was before the bombers spoiled the fun.

Atlanta has always been a company town dominated by Coca Cola. This time it shared the centre stage with other TNC heavyweights, mostly American. To the 3.5 bn world TV viewers their presence was inescapable. It was one of the biggest and splashiest TV coups the world had ever seen. Corporate advertising and sponsorship were the names of the game in Atlanta. The biggest of El Dorados.

The Big Three American networks: ABC (gobbled up by Disney), CBS and NBC (owned by General Electric) and their affiliates grabbed 90 per cent of TV advertising revenues. Alarmingly concentrated, media television, the most potent instruments for grabbing audiences, is the link between sport and corporate sponsorship. This is the antithesis of democratised sport; it marks a decisive phase in the uncontrolled rule of Big Capital; the end of the internationalist and democratic vision of the Olympics founders. The rights to sponsor and advertise by the corporate giants highlighted the extent to which most of the athletes had become functionaries of capital, extensions of transnational corporate muscle. According to The Economist, (July 20, 1996) TV rights for the 1996 Olympics raised more than one billion dollars from broadcasters around the world. The American TV rights to the Olympiads, up to and including 2008, were bought by NBC network for the staggering sum of \$ 4 billion. For the 1996 games NBC paid \$ 456 m, and the payoff was the most luxuriant in its advertising odyssey.

Coca Cola's overarching presence at the games were the grandest achievement of its ideological engineers. Atlanta witnessed the war of brands and the spectator was never allowed to torget it. Every second of its corporate existence is geared with laser-like intensity to meet one unquestioned goal: the universal exaltation of Coke and the promotion of bigger and bigger world market shares. In short world domination, Its marketing muscle was exhibited day and night. It was psychologically engineered to remind the spectator, buffeted by an unremitting barrage of daily propaganda, that when he quits the stadium the unique thought that he must take away with him would not be the cries of the wounded in Centennial Park or his favourite athlete, but the big red round logo of C-C. Olympic champs would come and go but in reality there would be only champ, the permanent champ and his name is Coke.

Advertising expenditures, as a general rule, remain one of the most closest guarded secrets of corporate power. Like the balance sheet itself they are the objects of sustained manipulation. The official advertising figures dished out in Atlanta are staggering by any standards but they are misleading to put it mildly. According to Sergio Zyman, C-C's marketing boss, in an average year Coca Cola allocates one-fifth of its \$ 1.6 bn annual consumer market budget to 'support' sport, including the metamorphoses of athletes into the paid functionaries of capital.

Of course 1996 is a special year and it has already spent \$ 125 m on TV commercials during NBCs coverage of the games; it has also spent \$ 40 m to become an Olympic sponsor; it has built a 12 hectare 'Olympic City' for visitors in downtown Atlanta, massively subsidised by the state of Georgia, most of it is tax deductible. The Georgia state legislature is the best friend Coca Cola could ever have. Its tentacles spread to every sporting event the Tour de France, cricket in India and Pakistan, etc.

As a C-C spokesman jubilantly proclaims on one of its Atlanta billboards: "Sports allows us to say to consumers. We like what you like". What the C-C ideologists did not say but could have said was: just study the costs breakdown of a Coke and you'll understand the key of our success. Around two-thirds of the final retail price of a coke is appropriated by C-Cs masters in Atlanta and its shareholders. Not bad for a beverage that's nothing more than brown sugar water with a phoney 'secret' formula thrown in

Reebok, Nike and Adidas cashed in on Atlanta's bonanza with a different set of strategies but whose ultimate goal was the same. With the disintegration of the Soviet Union and the plunge of Yeltsin's Russia into third world misery and debt the stage was set, as with every facet of Russian life, for the colonisation and takeover of the vast Soviet sports machine. Reebok which had ousted Adidas by 1994 for conquest of the Russian sports market became the coloniser par excellence.

This is how one member of the Russian sports federation puts it lugubriously: "Like all of Russia we've been bought out. Sure its the rule of the market. But it is part of Yeltsin's policies. Wa've been pushed into the sewers. We've got no money for sports. The infrastructure is rotting; the stadiums are falling apart; the coaches are quitting or have already quit. We are neither France nor Cuba." The colonisation process consists in pumping dollars into the enfecbled Russian Sports Federation, Reebok roped in the 400odd Russians in Atlanta who are on their payroll. That's not the end of the story. Reebok has already acquired a sizeable chunk of the Russian sport equipment retail market which, according to one marketing estimate, it hopes to boost to around 65 per cent by the next Olympics. All is feasible in Yeltsin's Russia.

Nike, one of the world's largest TNC apparel and sport manufacturers, is also one of the biggest stars in the TNC sports universe. To castigate Nike, as the International Olympic Committee (IOC) has done, for its billboard and other advertising propaganda stunts, reveals a woeful lack of understanding of what corporate capitalism is all about. Ethics has nothing to do with corporate advertising and its propaganda machine. Big bucks, mendacity and vulgarity is the name of this game.

The Nike billboard exhibited a US female basketball player jubilantly proclaiming: "You don't win silver – you lose gold." And there is tennis man Andre Agassi exclaiming, "If you're not here to win, you're a tourist" (Financial Times, July 26-27, 1996). Every stratagem from the ever-present billboards to the most expensive TV ad is designed to turn a quick profit and push the product.

Cashing in on the international sports boom, Nike's aggregate carnings (1996) soared 38 per cent revenues approaching \$ 7 bn. It invested a reported hundreds of millions of dollars for sponsorship of Brazilian soccer. Like Adidas and Coke, Nike has become a household word. But Nike has other facets that includes a \$ 26 m yearly contract with basketballer Michael Jordan, turned into one of the biggest sport icons. No amount of public relations coverups can dissimulate, however, the sheer exploitative nature of its manufacturing operations in the third world. It boosts its

profits by compulsory overtime and it operates in plants where all traces of labour militancy have been liquidated.

In Indonesia, Nike and its subcontractors (Korean, Thai and Taiwanese) pay a daily sub-minimum subsistence wage of \$ 2.23 to its largely adolescent female labour force as against the national minimum daily wage of \$ 2.59. Nike and its subcontractors obtained an exemption from the minimum wage increase that would have forced them to pay \$ 8.92 a month extra to each worker. And this at a time when Nike's profits are hitting record levels.

Commenting on these outrageous numbers Business Week, itself the mouthpiece of finance capital, notes: "Indonesia's military police deal harshly with those who rebel, and independent unions are outlawed" (Business Week, July 29, 1996). For whom is this critique destined? Is this not precisely the ideal of contemporary capitalism, a world of deregulation, and triumph of economic liberalism in its most pristine manifestation? Attanta provided the answers regarding the motive force of economic liberalism and globalisation.

The contrast between the profligate sums bestowed on a corporate servant as Jordan and the subsistence wages of an Indonesian girl worker is part of the normal workings of the transnational corporation. This is no aberration Both are domestics of Big Capital with a difference What Atlanta highlighted was the war of corporate capital or what I have categorised as the war within the

corporate Gulag, at its highest levels. The billions of dollars invested in TV time and the billboards point to one conclusion, namely, that the games themselves are the object of massive corporate colonisation.

What does the corporate's Gulag theory and practice in Atlanta reveal? What is its trajectory? Even before Atlanta the answer was known.² Atlanta has confirmed the fact that corporate marketing techniques and its paraphernalia will contribute to accentuate the frenzied thrust of mega capital concentration not only among the world's two leading beverage duos but among the triple sport behemoths as well.

Within the empire of Sports Inc there is no room for either amateurism nor the small and medium size companies. Inextricably related to this destructive tempo of corporate concentration is that the Gulag's marketing power will continue to push the world of Sports Inc into the purgatory of drugs. It is doing so masmuch as the upper physiological limits required to smash world breaking records is rapidly being reached. That is also another aspect of the corporate grab bag in Atlanta.

Indonesia: Beginning of End of 'New Order'?

Jan Breman

The privatised state has been a tool in the hands of a small elite who want to perpetuate their power to extend their illegally-gained wealth even further. The iron hand with which the regime maintains itself is the reason why Megawati and her PDI can count on far more support from diverse quarters than can be explained by nostalgia for Sukarno and the past.

NO, the driver of the motorised tricycle would rather not drop me by the entrance to the PDI party office. He prefers to hold his distance because you can never tell what might happen. However, many hundreds of Jakartans, particularly the young, are less scared and come daily to the headquarters of Partai Demokrasi Indonesia (PDI) which, in less than a month, has emerged as a political refuge where the military regime can be criticised openly and with unprecedented ferocity. The building is situated on a busy main road that is named after the leader of an early 19th century revolt against colonial domination. Referring to the erstwhile popular resistance movement led by Diponegoro, this morning's speaker says that the nation needs new heroes who will show them the way to freedom. His audience understands him all too well and, whenever his speech pauses, loudly chants the name of Megawati. Under the tarpaulin which spans the front yard a dais has been crected from which successive speakers address the assembled supporters, the hard core of whom remain for the whole day. Others stay for no more than a few hours, but on their departure they are immediately replaced by new sympathisers. Communication is two-way - the public applaud the speakers and call out their comments. Near the entrance hawkers sell pins, red headbands and other party emblems. On the other side of the street are small groups of more cautious observers of this political scene, too far away to be able to hear the speeches. Hoardings, flags and banners also deprive them of any view of what is happening behind the entrance. Nevertheless, these passers-by, linger for a time, not only fascinated by the free-word platform that has sprung up so suddenly, but also alert for any sings of activity from the military vehicles that stand at the ready a little farther away. The question is not whether, but when, the strong arm of the state will put an end to 'this nonsense'. However, the likelihood of such action has not been able to prevent the

open show of political defiance in the Jalan Diponegoro from attracting a large public. During the protest marches that periodically approach and leave the PDI building the crowd swells to somethousands. Party guards wearing red armbands and berets surround the marchers to ensure a well-ordered demonstration. Their task is not only to prevent radicalisation from within but, more importantly, to cope with any provocation directed from outside.

PDI AND PARTY CONGRESS

Together with the United Development Party, the Islamic PPD, the PDI forms the legal opposition in parliament. Collectively they have less than a quarter of the total seats, of which the larger part (282) are in the hands of the government party, Golkar. Another 75 seats are allocated directly to the military, without any elections. 'Opposition' is in fact a misplaced term since PPD and PDI have no autonomy in regulating their internal affairs. For example, they are prohibited from electing a party chairman who does not have the approval of the Indonesian military powers. The emergence of Sukarno's daughter as political leader of PDI was against the will of those powers. Megawati Sukarnoputri takes skilful advantage of her father's continuing popularity. His name and the charisma attached to it are her principal political capital. Megawati is not the first Asiatic woman to feel the urge to tread in her father's footsteps. Their number has gradually become worthy of respect: Benazir Bhutto in Pakistan, Indira Gandhi in India, Chandrika Kumaratunga in Sri Lanka, Sheikh Hasina Wajed in Bangladesh, and Aung San Suu Kyi in Myanmar. Like the last-named, Megawati speaks directly to her followers and, also in the threatening proximity of the military machos, calls for restoration of people's power. Until very recently, Sukarno's daughter was dismissed as someone whose political ambitions were greater than her talents. But the so-called lost housewife has

grown into her role, just like Cora Aquino in the Philippines. She has made herself the mouthpiece for the increasing dissatisfaction among the people over the enormous enrichment of those at the top, over the government's disinclination to alleviate the poverty of those at the bottom of society. about the arrogant power of the ruling clique. and about lack of freedom in all its aspects. The muzzled press can permit itself little risk, but an experienced reader knows how to read between the lines. Reports of a verbal exchange which took place at the end of the recent ASEAN meeting between Alatas, the Indonesian minister of foreign affairs, and a British journalist about recognition of the popular will and democracy as a leading principle of this regional organisation, apparently discussed conditions in Myanmar but in fact referred to the meeting's host country.

Is Megawati's PDI really a match for the well-oiled Golkar machine with which the government keeps society under control? There are few who sincerely believe that to be the case. But the problem of the floating mass, the recipe with which the regime keeps the population depoliticised, is that even the powerholders are ignorant of what lives in the minds of their subjects. In an attempt to fill that lack, secret opinion polls are held every now and then. The latest of these, held last spring, showed to the horror of the military, that the PDI scored no less than 40 per cent of the total votes, on par with Golkar. Reliable sources, of which there are many in sultanistic Jakarta, report that Suharto then ordered that the woman has got to go, and quickly! Implementation of that command could safely be entrusted to the army. A 'spontaneous' party congress, for which delegates of local branches all over the country were ordered to assemble in Medan with money and threats, deposed Megawati and chose as her successor Surjadi, who was handsomely rewarded for accepting this Judas' role. The minister of interior himself opened and closed the meeting, but the protests had started in Jakarta and elsewhere in the nation even before he had finished.

PROTEST

The deposition of the legal PDI chairperson proved a first-class blunder. It is characteristic of the regime's isolation that its political strategists had made no allowance for any protest. While her fate was being decided upon in Medan, Megawati addressed 5,000 of her supporters in an open air meeting in central Jakarta on June 20. She closed her speech by calling for civil disobedience. "I can mobilise millions of urban workers", she

threatened, "one word from me is sufficient to shut down offices and factories". At the end of her address her supporters formed into a procession which took the road to the PDI headquarters. Almost immediately, however, they were attacked by police and by soldiers. More than 100 people were wounded in the ensuing violence, two-thirds protesters, one-third police and soldiers. According to the official version, public order had been disturbed because protesters had thrown stones at the police. The party leadership, however, said that the riots had been induced by provocateurs. This last version agrees with other recent examples of the way in which the New Order in Indonesia is maintained. The regime has illegal gangs of thugs at its disposal who are brought in whenever it is too risky to use legal force, for example, when Timorese asylum-seekers were expelled from the grounds of the Netherlands embassy a short while ago. These gangs have close ties to Golkar. The proud name of Pemuda Pancasila conceals criminal elements whose mode of operations recalls the infamous tontons macoutes of Papa Doc's Haiti. According to local gossip, Suharto's son-in-law directed the action against the protesters from the safety of an armoured car and gave the order for force to be used.

Whatever the background of the violence used against Megawati's supporters, it has not yet brought an end to anti-government protests. New demonstrations followed a few days later, and staunch supporters kept vigil at the party headquarters also during the night hours to prevent an attack by mercenaries acting for the unsolicited and unwanted chairman, Sutjadi. Another procession was held in mid-July at which a 500-metre long banner was carried through Jakarta's streets. This was inscribed with supporters' names and with slogans expressing their unconditional dedication to the fight for democracy. Military surrounded the procession but had apparently been ordered not to intervene. The mood was less intense, even happy. Nevertheless, the conflict has since been further exacerbated. By acknowledging Surjadi as her official successor, the government has excluded Megawati from taking part in the next elections to be held early in 1998. That troublesome lady refuses to accept defeat, however, and now leads a contra-movement that is far greater than she could have achieved by her own efforts.

GROWING SOCIAL UNREST

In a region that is notorious for an unending series of corruption scandals, Indonesia takes the crown in bribes, backhanders and 'mediation commission'. The greed is greatest at the top of the government where its naked manifestation is likely to endanger

political stability. Suharto's late wife, Ibu Tien ('Sister 10 per cent', in popular parlance), taught her children how to do business. Suharto has always maintained an attitude of 'I know nothing', a pose which has no credibility in view of the outrageous cupidity shown by his sons and daughters. Bambang, who had a headstart as the eldest child, has achieved most in business, now owning a wide variety of market-dominating industrial conglomerates. Determined not to be outdone, his younger brother Tommy has launched the 'national car' project. The idea is that the Timor will be made in Indonesia. but that is still a long way away. The actual manufacturing plant is in Korea to where a batch of Indonesian workers were sent to put the car together. Their arrival in Korea has never been confirmed, but the pretence that the car is made by Indonesian hands is sufficient for tax exemptions - to the outrage of the Japanese, American and European car industries. Japan, which has never shown particular concern about violations of human rights, even threatens to submit a complaint about Indonesia to the World Trade Organisation. Suharto's grandson conceived a nice way to earn some extra cash by persuading the governor of Bali to introduce an extra tax on beer, drunk in large quantities by tourists coming to this insular paradise. The oldest daughter, Tutut, has also assured herself of a generous income by operating toll-roads among other things, but she is also politically ambitious. She is charperson of Golkar's party administration and has good connections with the army. The gossip is that Suharto would like to see her as his successor.

The state is privatised, a tool in the hands of a small elite who want power to extend their illegally-gained wealth even further. This is shown in the nepotism at the top. Popular anger about such practices has been further inflamed by the national collection intended to allow Habibie, the minister of technology, his own particular game. Indonesia's own aircraft industry. Since his cabinet colleagues refuse to provide further funds for this cash-devouring project, every citizen now has 'voluntarily' to contribute 5.000 rupiahs (less than US\$ 2). A small amount which no-one will refuse to pay, was the president's rousing call to the people. This typifies the lack of any understanding among the elite that 5,000 rupiahs represents a day's wage for a factory worker, and is more than couble the sum with which the greater mass of the people have to manage. The growing dissatisfaction is concentrated particularly among the social middle classes and is fed by economic insecurity notwithstanding more education, better and secure jobs are not available for the youth - and political frustration caused by repressive government. There is press censorship, and newspapers are likely to be prohibited if they publish unwelcome news. New communication techniques, however, including fax, e-mail and internet, enable dissidents to circulate information that is considered subversive. The rise of a market ideology has not caused the state to stand back, nor has it become more tolerant of deviating opinions and oppositional organisations. The iron hand with which the regime maintains itself is the reason why Megawati and her PDI can count on far more support from diverse quarters than can be explained by a misplaced nostalgia for Sukarno and the past.

Abdurrahman Wahid, leader of Nahdatul Uluma, has made it known that Megawati's fight is also his own. In reply to a comment that no more than 40 per cent of the contents of newspapers is 'genuine' and 'true' news, Gus Dur, as this leader of the enlightened section of the Islamic population is known, warned that that percentage is going to drop even further in the near future. In his view, the lack of freedom will increase rather than lessen.

RESISTANCE AND OPPRESSION

Since its creation in 1965, the Orde Baru has ruthlessly dealt with many open protests. The army has been deployed against the people not only in East Timor, North and South Sumatra and West Irian. Government force has also been used against street demonstrators in Jakarta, freedom-demanding students in Bandung, peasants in rural Java who protested against expropriation of their land, poor migrants who were driven from urban slums, and striking workers.

Intimidation and the use of gangs of thugs, whether official or not, is usually sufficient to restore the disrupted 'ordea' The present wave of unrest, however, is uncharacteristically broad-based. Protests are not confined to Jakarta but also occur clsewhere in the country. Perhaps even more alarming for the regime is that the unrest is shown by a wider range of social classes than ever before. The industrial belt that surrounds the capital has recently had to cope with strikes by workers demanding better treatment and higher wages. At the start of the Olympic Games in Atlanta a dismissed female factory worker travelled to the US in order to testify to her miserable employment conditions. She made the Nike shoes with which world records are being broken. Production has been contracted out by the parent firm to smaller factories with Korean owners. The woman was sacked when, as a strike leader, she asked that the wage should be raised to the legal minimum, at that moment little more than US\$ 1.25 per day. An American protest group arranged Cicih's journey and a meeting for her with the famous basketball-player Michael Jordan. This met with great displeasure on the part of the official trade union, the only one recognised, which was of the opinion that workers do not have the right to discuss their problems with outsiders. And it met with anger from high-level policy-makers in particular, who declared that foreign enterprises invest in Indonesia in order to make high profits, and that the working masses can choose between a low wage or none at all. Especially impressive was the protest march held in Surabaya on July 8 and 9 by 20,000 striking workers. This was organised by students and staff of local universities, the milieu from which many activists are recruited, calling themselves leaders of the Partai Rakyat Demokrasi (People's Democratic Party). The three leading figures have since been arrested and charged with subversive activities against the state

In an attempt to turn the tide, the powerholders have launched contrademonstrations and statements have been published in which mass organisations connected to Golkar demand action against the current wave of 'political destabilisation'. Official spokesmen insist that an orchestrated campaign is going on reminiscent of the agitation that preceded the 'events' in 1965. After the recent series of strikes, pamphlets are said to have been distributed in which the army together with capitalist forces are accused of the murder of two million fellow countrymen in the aftermath of the coup which marked the end of the Old Order. These are ominous signs that are intended to prepare public opinion for the restoration of order and authority.

BEGINNING OF THE END?

Is the regime tottering? As so often happens, this may be another case of wishful thinking. To say that it is unsteady, however, does not seem to be an exaggeration, due particularly to Suharto's ill-health. His recent and unexpected journey to Germany, accompanied by four of his children and a considerable retinue, must have been caused by more than the need for an ordinary medical check-up. Is the leader of the state weary of the heavy burden that he has carried for more than 30 years, and does he have the necessary strength for a seventh term as president? His sudden departure caused a free-fall on the stock exchange, particularly in shares in industries owned by his children, and to a devaluation of the rupiah. A photograph of Suharto taken in the palace gardens and sitting like an aged hippie on a Harley Davidson machine - comparison with the aged Mao swimming in the river Yangtse is difficult to resist - is meant to suggest considerable vitality. Palace gossip, however, says that the old man is tired and misses his wife. She kept her children under her thumb but Suharto is unable to keep their mutual rivalry within bounds and behind the scenes. It is the same problem of succession that plagued the ancient Javanese rulers. To step aside voluntarily while it is still possible, to relinquish power, would put the interests of the family empire at stake. There are many pretenders in Suharto's entourage but no acknowledged Crown Prince. The distrusting and calculating Suharto has provided himself with a different vice-president for each new term of office. Even more than the mass of the people, the leadership gives the impression of being adrift.

In a recent speech to an audience consisting of Pemuda Pancasila members, Suharto made it clear that no change is envisaged in the political structure. Those who hoped for gradual democratisation as the inevitable consequence of economic growth have all reason to feel cheated. The suggestion that a transition might occur from military dictatorship to a civilian society, prepared and guided by the top, has proven illusory.

Is the movement brought about by Megawati an indication of growing pressure from below? Certainly it is, but it is more than doubtful whether the regime will be prepared to make sufficient concessions. The head of Sospol, the army's political branch, said recently that the free-speech forum at the entrance to PDI headquarters was directed against the government and therefore must be labelled as subversion.

The question which occupies the minds of all commentators is: why didn't the army intervene earlier? The official restraint shown until the end of July seems to have been due firstly to underestimation of the intensity and scale of protest, then from differing views among the generals about how best to react and, finally, from reluctance to use force in chasing Megawati from PDI headquarters while ASEAN policy-makers had gathered in Jakarta. The day after that meeting was over, however, the military backed up gangs of thugs hired by Surjadi and stormed the PDI office, thus ending 'the unlawful occupation'. This operation, carried out with brutal violence, caused riots to break out in various parts of the city, resulting in hundreds of wounded and arrests. Dozens of deaths are said to have occurred, but bodies were removed in secret and names have not been published.

A corner of the curtain has been lifted but is about to fall again. If the millions of supporters claimed by Megawati should hesitate to answer her call to take to the streets, it will be due primarily to fear of a repeat of the 1965 massacre. The army insinuates that there is a communist plot intended to bring about a popular uprising. Such propaganda is believed neither at home nor abroad and even has the effect of making people doubt

the official version of events that led to the military coup of 30 years ago.

The coming few days will show whether, after the detention of trade unionist Pakpahan and the leadership of the PRD, which went into hiding but was hunted down, the authorities will now dare to tackle Megawati herself. And if so, how her supporters will react. The national celebrations on August 17, independence day, are awaited with anxiety. A major difference with the start of the New Order is that the military now have lost any international support. The US and the European Union have protested against the state repression of the democratic counter-movement. Neighbouring countries such as Singapore, Thailand and the Philippines closely watch the situation. The Straits Times and Bangkok Post together with other newspapers show concern about lawlessness in the streets of Jakarta, but also about the political manipulations by Indonesia's small but powerful elite. Such criticism from friendly quarters is a signal that the regime is about to lose any international credibility it still may have.

A pessimistic scenario suggests that Suharto will not be allowed to return for another term as president next year, only to be replaced by another general. The great powers, not least Japan, would probably prefer to see a more democratic system emerging but not if that transition is going to be accompanied by a social upheaval that would endanger their huge investments in the Indonesian economy.

More optimistic is the prognosis which gives greater significance to growing pressure on the regime from social forces within and from the bottom up in society. According to this line of thought, while there is life there is hope, the fight for freedom and equality has entered into a new phase.

"BACK-VOLUMES OF JOURNALS"

- We offer to supply back-volumes of most of the Indian Periodicals/ Journals from our own collection.
- We offer Library Discount + Free cloth binding.
- Subject-wise Catalogues are available on request. Specify your subject of interest.
- We also buy personal collection of back-volumes of Journals.

For details please contact:-

Rescuing Liberalism or Nietzsche?

Neera Chandhoke

Nietzsche, Politics and Modernity: A Critique of Liberal Reason by David Owen; Sage, London, 1995; pp 180, £35 (hardcover), £12 (paperback).

EVER since the eminent philosopher John Rawls published his much acclaimed A Theory of Justice in 1971, the world of academics has never been quite the same. The kind of scholarly outpourings we have witnessed in reaction/justification/defence of John Rawls is truly astonishing. It is not that his works are not worth citing, engaging with, commenting upon. Rawls, as it has been generally recognised, is one of the greatest contemporary legal philosophers who has rescued normative political philosophy from the arid desert to which it had been banished with the advent of behaviouralism, and restored it to its rightful place of pride. It is just that most of these commentaries/defenses/critiques present us with much more of the same. They have frankly proceeded to go round in circles. And then in 1993,2 Rawls went ahead and published his Political Liberalism which created another round of waves, partly because the extent to which he has gone to meet the comments of his communitarian critics is truly amazing-from comprehensive to political liberalism no less, and partly because he offered those of us who live in multicultural societies a way out of our political predicaments (though he himself insists that his theory is applicable only to western liberal democratic societies). And the circle of publishing in what has come to be known as the Rawls industry began again, with one work defending Rawls and another criticising him.

So it is with a considerable sense of deja vu that I took up David Owen's work, Nietzsche, Politics, Modernity, whose starting point - though argued only in the last chapter - is Rawls. Another of the same I told myself. And I must confess that the section which critiques Rawls (chapter 6) is much of the same. Most of this has been said by Michael Sandel in 1982.3 Consider the following: "...from Nietzsche's perspective, Rawls" philosophical liberalism is fatally flawed insofar as its reduction of society to a form of civil association between antecedentally individuated persons entails not only that it lacks any account of both culture and politics (and their relationship), but also that this devaluation of community expresses itself in a failure to recognise that the maintenance of our capacities for autonomous reflection and agency is dependent on communal practices, and, as such a liberal polity instantiates an individualism which may undermine the very capacities upon which its cogency depends" [Owen 1995: 138].

And Sandel phrases his critique of Rawls, "deontological liberalism", in almost the same words. Rawls' account is unpromising, he argues, because it presents a picture of an abstract disembodied self, whose legislation of the principles of justice is unconnected to empirical motivation of any kind. The notion of the 'antecedent individuation of the subject'4 neglects to see its social constitution. If the moral subject is divested of all contingent attributes, including its social endowments, the conception of the subject is 'too thin' for us to build a theory of justice. We cannot recognise ourselves in this formulation as agents whose identities are linked to specific histories. We are not, in Sandel's view, beings who are essentially independent of our ends, ideals and affective connections to others. Individual identity is intersubjectively constituted through membership of particular communities. The idea of the socially encumbered self whose identity is shaped by affective ties, and constituted by socially articulated aims, completes Sandel's picture of the socially encumbered individual.

But as I returned to reading Owen's work chronologically, I realised that my first impression had been unjust. One can arrive at the same conclusions by different routes, and the route taken by Owen is fascinating because it is linked to a critique of modernity. and of liberalism as the political avatar of modernity. This is a book worth reading if only because of its exemplary lucidity. Owen is remarkable inasmuch as in his critique of modernity he avoids the tortuous language of the post-modernists, their slavery to vocabularies, their utterly dense prose that is distinctly off putting, or which at least makes one reach for the nearest dictionary, and their inability to escape the confines of, what have now been elevated to the nonstatus of cliches. This work, to my mind, is what a book on political philosophy should be about. Its arguments are persuasively structured, and it is logical from the first to the last. I may not agree, as the last section points out, but I cannot but be impressed by these arguments. Let us examine them.

One of the undoubtedly unexpected fallouts of the velvet revolutions of 1989 has been the proliferation of academic literature stemming out of disquiet with liberalism. What was presented as the triumphant march of liberalism by many commentators, has by no means been either smooth or hassle free. As long as the intellectual cold war between the liberals and the Marxists dominated the agenda of social science, the internal squabbles between the loosely connected anti-Marxist scholars, were overwhelmed by their confrontations with the Marxists. The end of the cold war has seen the eruption of a remarkable number of critiques of the

liberal position from within the non-Marxi camp. From one side, the communitarial have launched the most devastating critiqu of the basic tenets of liberalism ever witnesse in the history of the ideology. From the othern that come the critiques of modernity and of liberalism as its political avatar critiques which appeal to the discontents of modernity such as Nietzsche.

The book under review belongs to the latter genre. David Owen in the prefact remarks, "...with the decline – no doubt, the short-lived – of the public authority of Marxist perspectives, Nietzsche provide another voice for those persons concerne by the platitudes of liberal triumphalism which sustains the project of a critical er gagement with liberalism in the public political culture of our constitutional-democrating regimes" (p. ix).

In his inquiry into the relevance of Nie zschean thought today, Owen keeps awa from tiresome historical excavations, or from equally tiring exegesis, as is the wont of many works on political philosophy. Wh. he does do is to bring Nietzsche to life : a critic of both philosophical liberalism ar political liberalism Rawls is the focus of much of this work;5 the other focus is scholar called Richard Rorty, who from h comfortable perch in the bourgeois liber society of the US, can tell us poor 'thu worlders' that liberal values cannot be tranplanted, for they are not based on foundation concepts potentially shared by everyon everywhere. They are nothing but the stuof specific histories, particularly the histo of the US.

Owen is perfectly correct in stating th liberal theorists can take themselves at their philosophy seriously only if the confront the critique made by Nietzsche. H effort, he says, is not to compel submissic to Nictzsche, but to open a debate between the theorists' philosophy and liberal though This is reminiscent of a method of argume well known in Indian philosophy. Th method states that before we accept argument as persuasive, we need to turn around and examine the opposite case, to s if that provides a better justification. Sin larly, (if we are fated to live with liberalis) at least for the foreseeable future), we ne to turn the liberal case around and see wh the other side looks like.

Owen begins his exposition by focusion Nietzsche's critique of Kantian elstemology which forms the basis of mu of liberal thought. Kant had argued the pistemology must either seek to establia knowing self which can transcend to vagaries of phenomenal life, or it must despof attaining knowledge at all. Nietzschetaliated by arguing that the activity knowing which follows from comprehensiof an objective world which is not affect by this act of knowing, is fatally flawed. It him, the conception of the self as transcendental reifies the self. The self is, effect, dehistoricised. The self is separat

both from the world which is to be known, and from the empirical self which is socially produced. "Consequently, whereas Kant claims that the unity of the world which is known is a function of the unity of the self which knows, Nietzsche argues that the 'unity of the known and the unity of the knower are derived from the activity of knowing' (p 28). Nietzsche agree with Kant that we only know things under description, but he does not agree that the essence of things are independent of description.

This does not mean that we cannot have knowledge of the world, only that we have to go about this in a different manner. We must recognise firstly that there is "no view from nowhere" as Thomas Nagel puts it.6 Our perspectives are already situated, all views are from somewhere. Secondly, it follows that the act of gaining knowledge can be neither disinterested nor objective -"our cognitive interests are not independent of our affective interests: logos is entwined with eros" (p 33). Perspectivism establishes the contextual character of knowledge. Owen at this juncture confronts the very legitimate charge of relativism which this perspective generates (prospective readers are advised to see pages 33 to 39 of his work on this). I am personally not convinced, for if we think of knowledge simply as entrenched judgments which can appeal to no transcendental norms for justification or validity, we are opening many doors to great disquiet. For this leads to unpredictability in both political and personal judgments. Relativism is morally and politically unsettling. But this requires a separate argument which I cannot enter into at this juncture.

The second way to knowledge is, for Nietzsche, geneaology, a concept made fashionable by Foucault. Genealogy gestures towards historical investigation. Historical reflection provides us with a picture of roads taken and roads not taken, so that we can grasp the contingent processes through which we, as modern individuals, are produced. Perspectivism naturally follows from tracing our family trees, since our structure of thought must accept that we and our thought processes are historically and culturally produced and located.

It is obvious that the reconstruction of the historical conditions of possibility, can only apply to particular situations and people. This recognition constructs a field of activity as a possible way of knowing and seeing the world. Our archives fashion our present and our future ways of being, allowing us to know why we act and think in a particular way, and why our history rules out different ways of thinking and acting. We can understand why we do not act in a particular way, we can open up through this activity fields of self-knowledge. However, whether we can adopt new ways of being is questionable. This is obviously a perspective with which advocates of historical breaks can have no patience - we can understand why we do not act in a particular way, and we can appeal to historical understanding to know why we cannot act in a particular way, but we cannot act in another way. We are in effect condemned to live in our archives, there is no possibility of escape. How Nietzscheans explain revolutions, or the manner in which women, dalits, or environmentalists have spoken back to history remains a puzzle.

Human history is explained by Nietzsche as propelled by the will to power, made equally famous by Foucault. The will to power provides us with an ontological account of how human beings function in an intelligible tashion. The thesis of the will to power offers us an explanation of human action, "the idea of the will to power can function as a principle of intelligibility insofar as it suggests that what mediates between possibility and actuality is the capacity of the distinct possibilities for human being immanent within our cultural practices to increase our feeling for power" (p 44). Our beliefs about the world are entrenched as a product of the degree to which these increase our feeling of power. For instance, Kantian notions of a priori judgments are deeply entrenched because they increase our sense of power. This sense of power consists in the fact that we are able through these means to order our experience in terms of time and space.

Owen uses these basic structures of Nietzsche's philosophy to undertake a critical revision of the history of liberalism and its privileging of reason. He examines the argument of On the Geneulogy of Morals, in which Nietzsche in three essays scrutinises how the idea of the autonomous self-reflective human being is produced. The development of the idea of man as someone who has the capacity to make and live up to his promises involves a series of presuppositions argues the philosopher: "Man must first of all have become calculable, regular, necessary, even in his own image of himself; if he is to stand security for his own future, which is what one who promises does" (p 57). Individual behaviour becomes predictable and calculable because we are taught not to do certain things, through memories of punishment. Human capacity for autonomous reflection and agency is not intrinsic to man, it is the product of humanity's labour on itself. Nietzsche's critique of philosophical reason leads to the alternative ethical thesis of anti-foundationalism.

Liberalism which rests on foundationalism, that is the commitment to certain unquestionable norms such as the concept of the self as antecedently individuated, the concept of self-reflective humanity, the primacy of reason, the separatedness of individuals, is attacked by Nietzsche as incompletely addressing both the historical roots of individualism, and the notion of culture. Nietzsche would argue that our capacity for sovereign agency is the product of the long pre-history of man, and our conception of the self as antecedentally individuated is not a metaphysical truth, but a cultural artefact produced under specific conditions to produce a desired versions of human beings. This has its own reverberations for political theory.

For liberals such as Rawls and Rorty, political freedom is conceptualised as the opportunity to pursue and revise one's conception of the good. Liberal politics is accordingly arranged to secure the exercise of this capacity, for instance, in the form of the neutral state, or rights in Rawlsian theory. Nietzsche, in the author's view, would argue that political freedom means much more than just liberty, it involves the overcoming of oneself. It is the exercise of our capacity to master ourselves. His position is that freedom is not simply the opportunity to exercise freedom, but to rationally exercise the capacity of self-mastery. "Thus, while both positions characterise human beings as having the capacity to pursue, reflect and revise their conceptions of the good, Nietzsche's position stresses that freedom is the rational exercise of this capacity and not simply the opportunity to exercise it" (p 165 italics in original).

In opposition to both Rawlsian and Rortian versions of liberal freedom, for Owen, it is only Nietzschean agonistic politics which can provide both political freedom, and more valuable types of human beings. The exercise concept of freedom as self overcoming, weaknesses such as indolence, greed and self-deception, is prior to the opportunity concept of freedom as absence of internal and external constraints. This selfovercoming is social inasmuch as it strives towards, and is measured by, public standards of what truthfulness and integrity involve. It, therefore, involves unconstrained dialogue between agents. One must be willing to engage in open and fair-minded discussions of one's conception of the good. Therefore, this agonistic engagement requires a public characterised by free and unconstrained dialogue.

Of course, the notion of the production of valuable human beings is one of the most controversial of Nietzsche's contributions. Owen interprets this in the following way: "all persons have an equal right of recognition which implies that all persons are valuable and, as such, deserving of respect, even if it does not imply that all persons are of the same value and deserving of equal respect" (p 167). Both individually and collectively, we value certain types of human beings. Accordingly, Nietzsche's criticism of liberalism jests on the fact that it entails the absence of a publicly constituted order of rank, and because it depoliticises the pursuit of conceptions of the good. In other words, Nietzsche deplores the neutrality of the liberal state, and deplores the absence of public recognition that certain noble types are simply more valuable, and so they deserve more respect. In conditions of pluralism the features which are publicly valued are integrity which arises through truthfulness and justice. These features are the formal enteria of good citizenship and the pursuit of nobility. If we were to possess a perfectionist state, and possess an order which ranks individuals on substantive standards of excellence constituted by the community, then we direct the activity of persons towards achieving those standards of excellence. It

RESERVE BANK OF INDIA SERVICES BOARD,

Advt. No. 2/96-97

MUMBAI

TELEGRAPHIC ADDRESS: SERVBOARD, MUMBAI

Applications (Apps.) are invited for 15 posts of Research Officers In Grade 'B' in Department of Economic Analysis and Policy (DEAP) of Reserve Bank of India (RBI).

A.VACANCIES: 15

General (G) - 06; Scheduled Caste (SC) - 04; Scheduled Tribe (ST) - 03; Other Backward Classes (OBC) - 02; (including 4 backlog vacancies). 'Reserve List' may also be prepared. If needed Board may increase the vacancies.

B.ELIGIBILITY CRITERIA

i) Qualifications (As on 01.08.1996)

Essential Masters Degree in Economics/Econometrics/ Commerce* with a minimum of 55% marks (50% for SC / ST) or equivalent grade

Desirable (i) Candidates with Doctorate Degree in above subjects* will be given preference (ii) Research or teaching experience and publication in standard journals will be considered as an additional qualification

ii) Age Limit (As on 01.08.1996) : 21 - 28 years.

- (i) Candidates having M.Phil. Degree / Doctorate Degree in specified subjects* eligible for relaxation in upper age by 3 and 5 years, respectively.
- (ii) Candidates with research / teaching experience* eligible for relaxation in upper age upto years of experience (maximum of 5 years).

iii) Age Relaxations

5 years for SC/ST, 3 years for OBC, Refer detailed advertisement for others. No cumulative age relaxation available.

* from / at recognised Indian or Foreign University / Instt

C.SCHEME OF SELECTION

Written Examination (WE) on **20.10.96.** Two papers each of 3 hours duration and 100 marks - (i) Objective and (ii) Descriptive (both on Economics) Standard of papers that of Master's Degree examination in Economics of any Central University in India.

Question papers for examination will be set in Hindi and English and answers may be written either in Hindi or English. Candidates may answer the interview either in Hindi or English at their option. Final selection will be based on WE and interview.

D.MINIMUM PASSING STANDARDS

The minimum marks for passing the examination are

- (i) 55% in each paper and 60% in the aggregate for General category, and
- (ii) 50% in each paper and 55% in the aggregate for SC /ST / OBC categories $\,$

E.EXAMINATION CENTRES

(Code Number	s in bra	ckets) - Select only one	Centre
Ahmedabad	(11)	Jammu	(20)
Bangalore	(12)	Kanpur	(21)
Bhopal	(13)	Madras	(24)
Bhubaneswar	(14)	Mumbai	(25)
Calcutta	(15)	Nagpur	(26)
Chandigarh	(16)	New Delhi	(27)
Guwahatı	(17)	Patna	(29)
Hyderabad	(18)	Thiruvananthapuram	(31)
Jaipur	(19)	•	

F. APPLICATION FEE

Rs.50/- (No fee for SC/ST) payable by Demand Draft favouring RBI, Mumbai However, candidates from unbanked areas may send fee by crossed Indian Postal Order in favour of RBI payable at GPO, Mumbai. Fee not to be refunded under any circumstances.

GSERVICE CONDITIONS / CAREER PROSPECTS

Pay Scale: Rs.4825-10350 Initial monthly emoluments about Rs. 7687/-. Other benefits as per detailed advertisement

H.HOW TO APPLY

Apps in prescribed format typed or neatly handwritten in English or Hindi on white foolscap paper should be addressed to the DY. GENERAL MANAGER, RBI SERVICES BOARD, HONGKONG BANK BUILDING, 6TH FLOOR, M.G.ROAD, HUTATMA CHOWK, POST BAG NO. 10009, MUMBAI-400001. Cover containing the App. should be superscribed "Application for the post of Research Officers in Grade 'B' Centre of Written Examination chosen Code No "Above cover should be sent by ORDINARY POST ONLY. Apps. In closed cover may also be dropped in the box specially kept for the purpose at the Board's Office.

The Board takes no responsibility for any delay in receipt or loss in postal transit of any app, or communication.

I. CLOSING DATE: 07.09.1996

(14.09.96 for applicants residing abroad, North-Eastern region, far flung areas, etc. as per detailed advertisement)

J. GENERAL INSTRUCTIONS

- (i) Before applying the candidates should ensure that they satisfy the eligibility norms in all respects as on the specified date. The Board will be free to reject any candidate at any stage of recruitment process if found ineligible for the post.
- (ii) ALs will be despatched well in advance of the date of examination if no AL / other communication is recieved from the Board, candidate should contact the In-Charge of the RBI Office at Examination Centre, chosen by him/her in the app with a passport size signed photograph, one day before WE
- (iii) Change of address should be communicated urgently
- (iv) Apps. which are incomplete or without fee or without attested copies of the certificates in support of caste (in the form prescribed by the Government for SC/ST/OBC candidates), age, eligibility, qualification and experience will not be considered

(Continued on Page 2142)

is the degree to which one attains those goals which governs the value, respect and authority with which one is publicly endowed. This also governs the feeling of power that one experiences. But when a public political order of ranking is lacking, the activity of self-overcoming lacks either a direction, or the conditions of its public significance, that is the public ranking of virtues.

It is this very aspect of Nietzsche's thought which had made it complicitous with Nazism's quest for the perfect heroic figure. It is true that Owen avoids the use of this term and substitutes integrity, truth and justice as desirable virtues, but the logic of the argument is that anyone who possesses these qualities is popularly seen in terms of heroism. The very logic of Owen's argument leads to this - perhaps unforeseen - consequence. And we know the Nazi quest, for such a figure was to have disastrous consequences for humanity. But even if we disregard this historical (ab)use of Nietzsche, the idea which is involved in the concept of public ranking of people is unfortunate. To construct a noble figure which is publicly accepted as the model for individuals - no matter how impeccable his credentials may be - and then to ask people to aspire to this figure is frankly distasteful.

For the idea that some individuals deserve more respect than others, opens the way to rampant inequality. To value some figures because they conform to societal interpretations of virtue, is to value individuals for what they do, rather than for what they are, which is the stuff of foundationalist theories of human rights. To set up models of integrity and good behaviour, so that human activity towards becoming more perfect can be given a direction, automatically rules out those individuals who do not conform to some public image of what is virtuous. Sorry, David Owen, you cannot get out of this conundrum by arguing that since the desirable virtues are those of justice and truthfulness, they cannot be questioned. For by cancelling out the idea of transcendental notions of truth and justice a la Nietzsche, you have been left with no handle with which you can privilege these virtues. And all your skillful handling of this vexatious aspects of Nietzsche's philosophy cannot rescue it from the very legitimate charges which have been levied against it. Nietzsche cannot be an alternative to the problematic questions of liberalism, since his conceptualisations lead us in different directions altogether.

Tradition and Modernity in Islam

Asghar Ali Engineer

Colonisation of Islam by Jamal Malik; Manohar, Delhi, 1996; pp 359.

THE colonisation had deep impact on the cultural and religious institutions of the colonised countries. In certain cases these institutions changed beyond recognition and in some cases they were substantially transformed. In some cases they absorbed western influences without apparently changing. There are few studies of the impact of western colonisation on the traditional institutions of the colonised countries. Jamal Malik of Pakistan undertakes such a study of Pakistan's traditional institutions. It is a fact that the intellectuals of the colonised countries thought themselves to be backward and considered it a matter of pride to absorb western influences. Some of them were thoroughly westernised, cut off from traditional roots.

Since Malik's study is in the Pakistani context, he limits himself to the Islamic institutions of the pre-partition period in India, and those of Pakistan after partition. Thus, in case of Islamic institutions he observes, "It is plausible that Muslim intellectuals picked up this concept of backwardness, accepted it as a fact, and finally attempted to stop the supposed decay of Islam by adopting western values and forms. This perception today serves to lend support to the 'third world' modernisation strategies. The precondition for this was to create a division of the world into modern and non-modern."

This division into modern and non-modern has become fundamental today. Those who refuse to abandon integrity of traditional institutions are thought to be backward and non-modern. There are others, on the other hand, who stand by change and try to convince others that modernity, properly understood, does not pose a threat to Islamic identity. Well, traditional intellectuals do feel it to be a great threat and shun it completely.

Pakistan's case is quite interesting though complex. The author points out, "Constitutionally, Pakistan is an Islamic state. Its legislative foundation supposedly is based on the Hanafi interpretation of Islam but till today the colonial legal system, such as the Pakistani Penal Law, is widely applicable. Besides these two legal systems, officially recognised since the Islamisation drive of 1977, customary law ('urf) is popular in most areas of Pokistan, subject to regional variations. Beyond three legal systems, there is the legal system of Shia which accounts for 10-15 per cent of the population and the 'legal perception' of the so-called fundamentalists who basically reject any orientation towards the major legal schools. They consider *Koran* and *Sunnah* as the only binding sources for the interpretation of law". This clearly shows how complicated the whole situation is. It is, therefore, quite interesting to study various institutions under a proper framework.

It is also interesting to note that before the impact of colonisation was felt, religion throughout medieval ages was more a matter of faith than an ideology of the state and society. Religion, specially Islam, assumed the role of a political ideology - and deemphasising its role as a faith - under the impact of colonialism. The author, therefore, rightly points out, "the process of ideologisation of Islam can therefore be understood as the intellectual response to the cultural domination of the western world in the 18th and 19th centuries". However, the author also maintains that it was only during the time between the two world wars that Islamic intellectuals started to re-evaluate Islam as a political ideology analogous to that of the western world and to extend it. Islam was now meant to cover all those areas which in the course of colonisation had been integrated into Muslim society as European structures. In this sense, according to the author, "Islamisation at first is a justification of the integration of western values and norms and thus of the colonial structures and not the dissemination of Islam in hitherto virgin un-Islamic regions". Socio-historically the process of ideologisation is outlined by the author as follows: traditional agrarian sector (TAS); colonial agrarian sector (CAS). Parallel to this emerged traditional urban sector (TUS) and colonial urban sector (CUS). The colonial sectors were connected via infrastructure and represented the colonial society. The author includes, in colonial structures higher grades in the army, police, administration and infrastructure, pirs, sayyids, shrines, waqf, universities, hostels, foreigners, capital, state sustained social system, political parties, freelance, self-employed, members of parliament, intelligentsia.

The author also draws our attention to two categories of Islamisation: traditional and integrationist. Integrationist Islamisation is integration of Islam and western norms and structures. In this light he examines the Islamisation of various institutions in Pakistan. He examines the Pakistani institution like the Council of Islamic Ideology (CII), madrasas controlled by traditional 'ulama (Deobandi, Barelwi, Ahl-e-Hadith and others).

The author points out at length how complicated is the task of Islamisation in Islam in view of different schools of thought. For example, he quotes Tanzil al-Rahman who expressed his fear at the time of the third Pakistan-French colloquium in 1982 that Islamisation is not implementable due to different Islamic interpretations prevalent in Pakistan. The author also points out that even during the Zia's period the 'ulama were merely tolerated by the state. This becomes evident in different speeches which Zia and other members of the cabinet made at 'ulama and masha'kh conventions and other official forums. It is said that even the president, not to speak of the bureaucracy becoming uneasy about the 'ulama, was not prepared any more to appoint any divines and theologians to the Council of Islamic Ideology He thought they were not concerned with contemporary issues but were only interested in being respected by their students. Zia ul-Haq is also said to have expressed his uttar disappointment regarding the 'ulama during the activities of the National Committee on Dini Madaris.

The author discusses various institutions in Pakistan like Islamic endowments, the Zakat system, the Islamic system of education, etc., and devotes a chapter to each subject. On the chapter on the Islamic system of education, the author says that during the Ayub regime only those persons were considered to be literate who had enjoyed a formal education (i.e., western, secular education), while even a student who had reached the highest degree of a madrasa was considered an illiterate. This concept which Malik feels is widespread among representatives of the colonial sector to this day, is reminiscent of the eurocentric outlook of Macaulay

After scholarly discussion of various issues in his book, Malik concludes, "Islamisation is an approach to curb autonomous and autochthonous institutions that have not only hitherto existed and functioned more or less peacefully but have also given identities to the masses". He also maintains that the study of the sociological basis of supporters of Islamisation points out to the fact that only a small religious elite and those integrated into a (post)-colonial system are busy defending their state through this policy. These elite are bound to draw their perceptions of state and society not only in contrast to western ideologies but also in conformity with them. They are committed to a Weltanschauung which can cope with the west, not by abolishing the given structures but by enlarging the sphere of the state from which they receive their identities and in which they reproduce themselves.

The book is a thorough and scholarly study of Islamisation and its impact on the Islamic institutions in Pakistan. The author has substantiated his thesis with wealth of data which he seems to have collected with great patience and labour. The book undoubtedly will be of great interest for scholars and for those who want to understand the process and consequences of Islamisation.

Representation of Hindu-Bengali Memories in the Aftermath of the Partition

Dipesh Chakrabarty

This paper discusses a set of essays first serialised in the Bengali newspaper Jugantar from 1950 on and later collected together in 1975 in a book called Chhere Asha Gram ('The Abandoned Village'). Written in the aftermath of the partition, these essays capture the sense of tragedy that the division of the country represented to the authors.

There are two aspects to this memory: the sentiment of nostalgia and the sense of trauma, and their contradictory relationship to the question of the past. A traumatised memory has a narrative structure which works on a principle opposite to that of any historical narrative. At the same time, however, this memory, in order to be the memory of a trauma, has to place the Event within a past that gives force to the claim of the victim.

The native village is pictured as both scared and beautiful, and it is this that makes communal violence an act of both violation and defilement, an act of sacrilege against everything that stood for sanctity and beauty in the Hindu-Bengali understanding of what home was. Muslims are mentioned in these essays; indeed their depiction is critical to the depiction of an idyll, but their 'traditions' are not part of the sacred or of the beautiful.

MEMORY is a complex phenomenon that eaches out to far beyond what normally constitutes a historian's archives, for memory s much more than what the mind can emember or what objects can help us locument about the past. It is also about what we do not always consciously know hat we remember until something actually, is the saying goes, jogs our memory. And here remains the question, so much discussed hese days in the literature on the Indian partition, of what people do not even wish o remember, the forgetting that comes to our aid in dealing with pain and anpleasantness in life.1 Memory, then, is far more complicated than what historians can recover and it poses ethical challenges to the investigator-historian who approaches the past with one injunction; tell me all.²

The set of essays I propose to discuss here turns fundamentally on this question of difference between history and memory. They were first serialised in the Bengali newspaper Jugantar from 1950 on and later collected together in 1975 in a book called Chhere Asha Gram ('The Abandoned Village') under the editorship of Dakshinaranjan Basu, a journalist in Calcutta.3 The names of the authors of the individual essays are not mentioned in the book nor do we have any idea of their age or gender though one would suspect, from the style of writing, that with the exception of one, the essays were written by men. The authors recount their memories of their 'native villages' - 67 in all - of East Bengal belonging to some 18 districts. Written in the aftermath of the partition, these essays capture the sense of tragedy that the division of the country represented to these authors. This attitude was more Hindu than Muslim, for too many if not most of the Muslims of East Pakistan, 1947 was not only about partition, it was also about freedom, from both the British and the Hindu ruling classes.⁴

My aim is to understand the structure of sentiments expressed in these essays. One should remember the context. There is no getting around the fact that the partition was traumatic for those who had to leave their homestead. Stories and incidents of sexual harrassment and degradation of women, of forced eviction, of physical violence and humiliation marked their experience. The Hindu Bengali refugees who wrote these essays had to make a new life in the difficult circumstances of the overcrowded city of Calcutta. Much of the story of their attempts to settle down in the different suburbs of Calcutta is about squatting on government or privately owned land and about reactive violence by the police and landlords.5 The sudden influx of thousands of people into a city where the services were already stretched to their limits, could not have been a welcome event. It is possible, therefore, that these essays were written with a view to creating a positive emotional response in the city towards the refugees. The essays were committed to convey a shared structure of Bengali sentiment through the grid of which the irrevocable fact of Hindu-Muslim separation in Bengali history and the trauma surrounding the event could be read. The question of creating in print something of the sentimental and the nostalgic about the lost home in the villages of East Bengal was the task that these essays had set themselves. Not surprisingly, therefore, they drew on the modes in which 'the Bengali village', and

in particular the villages of East Bengal had already been seen in Bengali literary and nationalist writings.

There are then two aspects to this memory that concerns us here: the sentiment of nostalgia and the sense of trauma, and their contradictory relationship to the question of the past. A traumatised memory has a narrative structure which works on a principle opposite to that of any historical narrative. At the same time, however, this memory, in order to be the memory of a trauma, has to place the Event - the cause of the trauma, in this case, the partition violence - within a past that gives force to the claim of the victim. This has to be a shared past between the narrator of the traumatic experience and the addressee of the narration. Yet it cannot be a historicist version of the past, one that aims to diffuse the shock of the traumatic by explaining away the element of the unexpected. Let me explain.

Consider what makes a historical narrative of the partition possible. A historical narrative would lead up to the event, explaining why it happened and why it happened at the time it did. Indeed, for a historical analysis of the event of the partition, the event itself would have to be fundamentally open to explanation. What cannot be explained normally belongs to the marginalia of history accidents, coincidences, concurrences that remain important to the narrative but which can never replace the structure of causes that the historian looks for. Conceived within a sense of trauma and tragedy, however, these essays maintain a completely different relationship to the event called the partition. They do not lead up to it in their narratives, the event of the partition remains

tundamentally an inexplicable event. Nothing, it is claimed, could have prepared the narrators for the ethnic hatred they were subjected to in what they considered their own homelands. The authors express a sense of stunned disbelief at the fact that it could happen at all, that they could be cut adrift in this sudden and cruel manner from the familiar worlds of their childhood. Nothing here of the explanations of Hindu-Muslim conflicts that we are used to receiving from historians - no traces of the by-now familiar tales of landlord-peasant or peasantmoneylender conflicts through which historians of 'communalism' in the subcontinent have normally answered the question, why did the Muslim population of East Bengal turn against their Hindu neighbours? Here the claim is that this indeed is what cannot be explained. The writers of these essays are all caught unawares by this calamity. One refrain running through this book is how inexplicable it all was neighbours turned against neighbours after years of living together in bonds of intimacy and affection, friends took up arms against friends. How did this come to pass? This is the question that haunts the book. As the following quotes from Chhere Asha Gram will show, the event was not only seen as inexplicable, it was also seen as something signifying the death of the social:6

Dhirenbabu used to teach us history... He had been the Headmaster of our Jaikali high school for the last few years. Even a short time ago, I had heard that he was still in the village. I saluted his courage on hearing this.. But, to my surprise, he turned up in my office one day and told me about his plight. He and his companions were attacked by the friends of the very student who had advised him to leave while he still commanded respect. Eventually, he managed to extricate himself and his family in exchange of two hundred rupees, thanks to some mediation by his favourite student, and crossed the Padma to come to Calcutta. But the simple-hearted teacher from a village school remained in a state of shock - what was this that had happened? how did it happen? All these questions crowded his mind. The age of Ekalabya is now in the womb of a bottomless past, we all know that it will not return. But still it was unthinkable that in the land of the newly independent Pakistan, it is the guru who would have to pay the student... Yet this happened and who can tell if this will not be the permanent rule in the kingdom of shariat? (p 7)

Hindus, Muslims, Sikhs, Christians have always treated women with respect, what is this that happened today? (village Shonarang, Dhaka district, p 57)

How could that land become somebody else's for ever! Just one line drawn on the map, and my own home becomes a foreign country! (Binyapher, Mymensingh, p 66) True, my home is in a country to which I

nave no relation. The house is there, the village is there, the property exists but I am homeless today. The suffering of somebody who has had to leave his home can only be appreciated by a person with a large heart... Man, the son of the immortal one, knows no happiness today - pleasure, security, peace, love and affection have also left the land with us. On all four sides exist the filthy picture of mean intrigues. Where have the images of the olden days - of happy and easy-going people and villages disappeared?... Who has stolen our good qualitics? When will we be delivered from this crisis of civilisation? What happened was beyond the comprehension of ordinary human beings. By the time they could [even] form an idea [of the situation], the destruction was complete (Sankrail, Mymensingh, pp 88-91).

Why was the innocence of the mind banished after so many days of living together? Why did the structure of the human mind change overnight? (Sakhua, Mymensingh, p 101). Who would have thought that the country would be engulfed in such a fire? Brothers fight and then make up to each other but the common person had no inkling that the single spark of the day would start such a conflagration (Kanchabali, Barisal, p 122). Who is the conspiratorial witch whose [black] magic brought death to the cordial social relations that were to be seen even only the other day? Why does man avoid man today like beasts? Can't we forget meanness, selfishness, and fraudulent behaviour and retrieve [the sense of] kinship?... Was our kinship based on quicksand, why would it disappear into such bottomless depths? (Rambhadrapur, Faridpur, pp 155, 156)

I am today a vastuhara in this city of Calcutta. I live in a reliet camp. Some in this camp have contracted cholera. A vastuhara child died of pox this morning when I received a handful of flattened rice. I do not dare to approach the 'relief babu' who only gets into a rage if I try to say something. I do not ask, why this has happened...At the time of our leaving, I asked for [a loan of] the boat that belongs to the grand-son of Nurshvabi without realising that he also had turned against us. We tiptoed our way under the cover of darkness from Patia to Chakradandi. (Bhatikain, Chittagong, p 194).

And our Muslim neighbours? For eons we have lived next to them sharing each other's happiness and suffering, but did they feel the slightest bit of sadness in letting us go? Did it take only the one blow of the scimitar of politics to sever for ever the kinsh'p that had been there from the beginning of the eras? (Ramachandrapur, Sylhet, pp 235-36).

On the day of the Kali puja we used to take care of the sacrificial goat, carefully feeding them leaves of the jackfruit tree and carrying them... and stroking them all day. But we never felt any pain at the moment when we pushed toward death this creature that we

had looked after with so much care all day. We were not old enough to explain then these contradictory qualities of the mind but today it surprises me a lot to think about it. [But] isn't that what has happened all over Bengal? (Bheramara, Kustia, p 293).

This very ascription of an inherent inexplicability to the event of the partition is what gives these essays their pathos. They are more like the helpless recall of a victim overtaken by events and less like the reminiscences of one in narrative control of them. And this, I suggest, is the first important distinction we have to note between history and memory (for the Bengali bhadralok) of the partition in Bengal. History seeks to explain the event, the memory of pain refuses the historical explanation and sees the event causing the pain as a monstrously irrational aberration.

These are undoubtedly essays written in the spirit of mourning, part of the collective and public grieving through which the Hindus who were displaced from East Bengal came to terms with their new conditions in Calcutta. Yet we have to remember that this grieving was being publicised in print, perhaps in the cause of the politics of refugee rehabilitation in West Bengal in the 1950s that Prafulla Chakrabarti has written about in his book The Marginal Men. This mourning therefore had the political task of garnering sympathy by speaking, at least in theory, to the entire readership of the Bengali press.

I

There are two Bengali words for 'refugee', sharanarthi, meaning, literally, someone who seeks refuge and protection, sharan, of a higher power (including God); and udvastu. somebody who is homeless but homeless in a particular sense, the word 'home' carrying a special connotation. The word vastu used here to mean 'home' is a Sanskrit word of Vedic vintage. Monier-Williams defines it as meaning, among other things, "the site of foundation of a house"." In Bengali the word is often combined with the word bhita (or bhite), a word connected to the Sanskrit word bhitti meaning 'foundation'. The idea of 'foundation' is in turn tied to the idea of 'male ancestry' so that the combined word vastuvita reinforces the association between patriliny and the way in which one's dwelling or home is connected to the coception of foundation. One's permanent home is where one's 'foundation' is (the subject of this imagination being, undoubtedly, male). The Bengali language has preserved this sense of distinction between a temporary place of residence and one's foundational home, as it were, by using two different words for a house, basha and bari. Basha, no matter how long one spends in the place, is always a temporary place of residence, one's sense of belonging there is transient. Bari, on the other hand, is where one's ancestors have lived for generations. Middle-class Bengali Hindus of Calcutta, when it came to ritual occasions to do with life-cycle changes (such as marriage), often refer to the ancestral village in explaining where their bari was while their basha might bear a Calcutta address.9 Bari would also be exchangeable with the word desh, signifying one's native land. An udvastu then - the prefix 'ut' signifying 'off or 'outside' - was someone who had been placed outside of where his foundations were. And since this was not a desirable state, it could have only come about through some application of force and/or through some grave misfortune. For the ability to maintain connections with one's vastubhita across generations is a sign of being fortunate, a fortune that itself owes something to the auspicious blessing of one's ancestors. This idea of 'home' was extended during the course of the nationalist movement into the idea of the 'motherland' where Bengal became the name of part of the world made sacred by the habitation of the ancestors of the Bengali people. To become an udvastu was thus to be under some kind of an extreme curse. And if this curse had befallen somebody through no fault of their own, they deserved sympathy and compassion from others. This could indeed be the language of one's self-pity as well. But when a refugee spoke in this language of self-pity, he spoke, obstensibly, for the nation. "I recall", wrote one contributor to Chhere Asha Gram, "that about 12 years ago when a household in our village lost their only son, Deben, my grandmother remarked in sadness, 'What a pity, there is nobody left to light the lamp at Sarada's bhite [this being an auspicius ritual of middle-class Hindu wellbeing]'. Today, every Hindu family in East Bengal, even if they are blessed with sons, is bereft of people who might have lit the lamp at their bhite.10

To achieve this effect of speaking for the Bengali nation, the essays in Chhere Asha Gram have recourse to a particular kind of language, one that combines the sacred with the secular idea of beauty to produce, ultimately, a discourse about value. These are narratives that have to demonstrate that something of value to Bengali culture as a whole had been destroyed by the violence of the partition. The 'native village' is pictured as both sacred and beautiful, and it is this that makes communal violence an act of both violation and defilement, an act of sacrilege against everything that stood for sanctity and beauty in the Hindu-Bengali understanding of what home was. There are four narrative elements that help achieve these ends. What gives the 'native village' its sacredness is patriliny, its ancestral connection. Worshipping of the land of the village was the equivalent of worshipping one's ancestors. The language of secular

aesthetics is provided, on the other hand, by three different ingredients, all identifiably modern in character. They were: the idea (and hence the relics) of antiquity, connections the individual village may have had with recent nationalist history, and modern secular literary descriptions of the beauty of the landscape of rural Bengal. Altogether, this was a combination where sacredness was difficult to separate from questions of aesthetics. But one thing is clear: nothing in this combination had anything much to do with the Muslim pasts of Bengal. Muslims are mentioned in these essays; indeed, their depiction is critical to the depiction of an idyll but their 'traditions' are not part of the sacred or of the beautiful. The following excerpts will demonstrate this.

Discourse of Value I: Ancestry, Patriliny and the Sacred

I will refrain from framing the quotations that follow. They are self-explanatory. They all refer the reader to the narrative association between the sacred and patriliny. The reader will need no reminding that the figure of the mother, often evoked in describing one's sense of attachment to the land, is not a matriarchal conception.

In this urban life humming with the sound of work, a message of greeting from a friend reached me one evening. He had just returned from [having spent some time in] the lap of the village in which we were both born. The question he asked as soon as we met was: 'I have brought this ultimate treasure for you back from desh, can you guess what it might be?' ... Eventually, he surprised all by handing over to me a clod of clay. This was from the soil of my bhite, the 'Basu-house', sacred from the blessing of my father and grandfather This soil is my mother. The sacred memory of my forefathers is mixed with this soil. To me this was not just of high value - it was invaluable. I touched this clod to my forehead. This is no ordinary dust. This clay is moist today with the blood that has been wrung out of Bengal's heart. (Bajrojogini village, Dhaka district, p1).

For seven generations we have been reared on the affection and grace of this land, perhaps our yet-to arrive progenies would have one day made this land their own. But that hope can only feel like a dream today. (Khaliajuri, Mymensingh, p 73).

An obscure.. village though it is, Gomdandi is a veritable part of historic Chattagram (Chittagong). In so far as can be gathered from history, it is observed that my ancestors Madhabchandra Majumdar, exasperated by the oppression of the bargi [Maratha raiders], left Bardhaman for Chattagram nearly two hundred 200 years ago and founded a settlement there in the village of Suchia north of the river Sankha. Sometime later ...Magandas Choudhuri came to his farm in

Gomdandi village and built a homestead there ... The village that is more-valuable-than-gold, where my forefathers had grown up for seven generations, where is that village lost today? Where is Gomdandi today and where am 1? (Gomdandi, Chittagong, pp 195, 197). 11

But no friends stopped us and no Musalman neighbour told us not to go, the day we, driven by the need to save our honour and life and with no fixed destination, left for ever the sacred land of our place of birth where our forefathers for seven generations had had their bhite (Ramachandrapur, Sylhet, p 235)

We did not want to think that we might have to leave the village. Yet we had to leave and come away Everybody did their last act of obersance on the day of our departure - at the foot of the Tulasi tree [a sacred plant bringing well-being to the Hindu homestead]. in the deity-room, even at the door of the cowshed. My old aunt would not leave the threshhold of the deity-room, her tears and the sadness of the moment wetted my heart too. The village, associated with the many memories of my forefathers, was like a place of pilgrimage to me. On that last evening, I prepared myself for the departure with a respectful salute in the direction of the village, my mother. (Amritabazar, Jessore, p 241)

I wonder, will it not ever be possible to go back to the lap of the mother we have left behind? Mother – my mother-land · is she truly of somebody else's now? The mind does not want to understand (Dakatia, Khulna, p 257)

DISCOURSE OF VALUE II. ANTIQUITY, HISTORY AND NATIONALISM

It is understandable that the remembered village would derive some of its value from the associations it could claim with the nation's antiquity and anti-colonial struggle. The point to note is how unselfconsciously this association becomes Hindu. Nothing that the Muslims could take pride in feature in these accounts. Some excerpts follow:

The name of Bajrojogini is unforgettable in the history of Bengal—this is the place of birth of [the] ancient scholar Dipankar Srigyan Atish. The historical village of Rampal next door—the seat of the Sena kings—is without any beauty today. I had listened to speeches by the Congress leader Surya Sen at the time of [the] non-cooperation[movement] (Bajrajogini, Dhaka, pp. 3, 5).

Sabhar, my village, is one of the main centres of commerce in the district of Dhaka. In her breast she carries centuries of indestructible history, fading skeletons of ancient civilisations...It was here that the lamp of [learning] of Dipankar Srigyan was lit first, it was here that his education started in the house of the guru. Sabhar then was a city

Studying International Relations: A Course in Research Methods and Recent Trends

Under the Ford Foundation's grant to the ASRC, a two-week course in international relations is being planned to help younger (below 35 years) research scholars and college/ university teachers in India in enhancing their skills in research and in updating their knowledge in the field. Faculty will consist of senior scholars and teachers from India and abroad.

- The Course will focus attention on "how" to do research systematically, and how to write the dissertation. Invited faculty will discuss their recently published work as case studies in research and writing. Some lectures may be devoted to latest trends of research in international relations. Participants are expected to make a presentation of their current research. Enrolment will be limited to 25 participants.
- * Certificate of participation will be given to those who successfully complete the Course.
- Scholars registered for M.Phil/ Ph.D. in the field of international relations (broadly defined) and young faculty members teaching courses in the subject in colleges and universities in India are eligible to apply.
- * ASRC provides food and accommodation in the hostel (for outstation participants on a double occupancy basis).
- Selected candidates are eligible for round trip sleeper class train fare.
- The Course is scheduled to be held during 9-20 December 1996 at the ASRC.
- * Last date for receiving the applications in prescribed form is 15 October 1996.

of supremacy, the capital of Kaja Harishchandra, adorned with all kinds of wealth (Sabhar, Dhaka, p 10).

Dhamrai, a place of pilgrimage. In the very ancient days the Sanskrit name was Dharmarajika. The modern name of Dhamrai was derived from the Pali name Dhammarai Truly, the people of Dhamrai were mad about religion. But what is this result of so much cultivation of dharma? – The people of Dhamrai are themselves without a dham (place)! (Dhamrai, Dhaka, p 19)

The well known educationist Dr Prasannakumar Ray and the once-famous doctor of Calcutta Dr Dwarkanath Ray were both born in this village. It was in this village that Pandit Krishnachandra Sarbabhauma, a logician of yore belonging to the whole of Bikrampur and the neighbouring regions, lived in a thatched hut, teaching Sanskrit to the students of his tol [traditional school for learning Sanskrit]. (Shubhaddhya, Dhaka, p 42)

The history of my village is the history of peace. Its historical heritage makes it great. It contains the ruins of the Buddhist period...The successful women and men of this village come to mind. Some of the people from here have become famous professors, some ICS [officers], while some have gone to Europe as representatives of independent India (Shonarang, Dhaka, pp 54, 59).

Banaripara occupies a special place in [the annals of] all the political agitations, from the Swadeshi movement of 1905 to the nonco-operation and the civil disobedience movements. The contribution of this village in the freedom struggle of the country is truly great. The 16-year old youth, Bhabani Bhattacharya, who gave his life to the hangman for trying to kill the then governor [Mr] Anderson at a place called Lebong in Daijeeling in 1934, was an unselfish son of this village (Banaripara, Barisal, p 108). My village has remained blessed and sacred ever since it received the touch of the sacred feet of Netaji Subashchandra [Bose] (Gabha, Barisal, p 113).

It is said that it was during the reign of the emperor Shahjahan ...that the Bosu family settled here. Under the protection of Kandarpanarayan, the *Bhuians* of Chandradwip, a great and civilised society grew up in the neighbouring villages of Gabha, Narottampur, Banaripara, Ujirpur, Khalishakota and so on (Kanchabalia, Barisal, pp 118-19).

Many, instead of going to Navadweep, would come to the world-conquering pandit of this village, Jagannath Tarkapanchanan. I have heard that some of the stone images and stone inscriptions of Nalchira have found a place in the Dhaka museum (Nalchira, Barisal, pp 141-42).

Navadweep, Bikrampur, Bhatpara – the place of our Kotalipara is inferior to none among these jewels of the crown of brahmanical knowledge in Bengal. (Kotalipara, Faridpur, p. 148)

I his young brahman named Rajaram Ray features as a footnote to the history of Bengal. By the sheer force of his arms, Rajaram ... tounded the settlement of this Khalia village. Gradually, his thatched hut was converted into a seven-winged palace. Only a fourth of that huge palace exists today (Khalia Faridpur, p. 164).

I have mentioned the copper-inscriptions of Kumar Bhaskar. discovered only two miles away from our village. The Kushari river described in those inscriptions still flows past our village from this may be gauged the antiquity of the villages in this area (Ramchandrapur, Sylhet, p 236).

Senhati is one of the famous villages of East Bengal.. There is a saying that Ballal Sena made a gift of this village to his son-in-law Hari Sena...It was Hari Sena who named it Senhati. The Digvijaya-prakasha says that Lakshman Sena established a town called Senhati near Jessore.. Be that as it may, we do not need history now any more, Senhati today exists in its glory. I am a son of that village. That is what makes me proud (Senhati, Khulna p. 248).

The village is self-sufficient. Its name is Ghatabari. The fittle river Atharoda flows past it A few miles away is Bhangabari, the birth-place of the poet Rajanikanta Sen. Raja Basanta Ray is the person whose name is unforgettable in the history of this village. The ruins of his palace are still there in the village next door (Ghatabari, Pabna, p 277)

What I have heard about the history of the village is this Sati, the goddess, killed herself on hearing Daksha [her father] speak ill of her husband [Shiva]. One of the fifty-one pieces [of her body] fell on this obscure village Bhabanipur in north Bengal (Bhabanipur, Bagura, p 303).

Let me tell you the history of the name Borla. Budhraja built a big fort and a royal palace over two square miles. With the passage of time, a temple was built at the fort, the temple of the goddess Budheswari. Gradually, the name was transformed in ordinary speech to Bodeswari, and from that came Boda (Boda, Jalpaiguri, p. 315).

DISCOURSE OF VALUE III: IDYLLIK VILLAGE, BENGALI PASTORALISM AND LITERARY KITSCH

Apart from antiquity and the glories brought about by the village's participation in the life of the nation there is also a present of the village but it is an eternal present. The village lives in an idyllic present into which intrudes the beast of communalism. The writers of the essays in *Chhere Asha Gram* are not the first to create this idyllic picture of the Bengali village. The picture had been developing since the 1880s, the time when nationalist writers such as Bankimchandra Chatterjee and later Rabindranath Tagore and a whole host of others drew upon new

perceptions of the countryside to create, for and on behalf on the urban middle classes, a powerfully nostalgic and pastoral image of the generic Bengali village. Thus the basha/bari distinction was rewritten into a much larger opposition between the city and countryside. I do not have the space to develop the point here but a few words may help set this document into its own context.¹²

The geographical name 'East Bengal' may have been of modern colonial and administrative origins but the languages and the ways of the people of the eastern side -people usually called 'bangals' by their detractors on the west - were for long an object of amused contempt in the western side of Bengal. We know, for example, that the great Bengali Vaishnava leader Chaitanya of the 15th-16th century reportedly once entertained his mother after his travels in the east by deliberately mimicking the manners of speech of the 'bangal'.13 This tradition surfaces in Calcutta in the mid-19th century when the city expands as European rule consolidates itself and people from the eastern side begin to move to the city in large numbers.11 It is significant that Bhabanicharan Bandyopadhay's text Kulikatakamalalaya (1823) while using the figure of the 'stranger to the ways of the city' does not make the 'stranger' speak in the bangal accent.15 The bangal, it would appear, does not feature as the butt of jokes until well into the 1850s. By the 1860s, however, the bangal emerges as a standard laughing stock of the Calcutta stage, one of the most famous characters being that of Rammanikya in Dinabandhu Mira's temperance-inspired play, Sadhabar Ekadashi (1866). Rammanikya is immortal for the following lines reporting his pathetic attempts to become one of the city's sophisticated. His self pitying sentences would speak for a long time to the sense of marginality that migrants from East Bengal telt in a Calcutta dominated by the dandy descendants of the residents of the western half of the province:

I have eaten so much rubbish yet I cannot be like they are in Calcutta. What have I not done that is not Calcuttan-like? I have gone whoring, made my woman wear fine dhoti [the nromal sign of a widow], consumed biscuits from European houses, imbibed bandil (brandy) – yet in spite of all this I could not be a kalkatta-like! What use is this sinning body, let me throw myself into the water, let me be eaten by sharks and crocodiles. In

Both before and after independence, this image of the man from East Bengal has supplied much of the urban humour of Calcutta. Sometimes, in fact, gifted artistes from East Bengal have used this to their advantage as in the case of the pioneering

stand-up Bengali comedian Bhanu Banerjee who made a career in the 1940s and the 1950s selling precisely the accent Calcuttans loved to laugh at.17 But some significant changes in the cultural location of East Bengal began to take place from the 1880s as an emergent Bengali literary nationalism started to work out, in the poetry and music of Bankimchandra Chatterjee, Rabindranath Tagore and others, an image of Mother Bengal as a land of bounty. Accompanying all this was the idea of a Bengali 'folk' situated in the countryside and evincing, as against the artificiality of the city of Calcutta, the qualities of the Bengali 'heart' (another category essential to the romantic nationalism of the period).18 The village, as opposed to the city, became the true spiritual home of the (urban) Bengalis. The riverine landscape of East Bengal was as critical to this development as were new ways of seeing that landscape, including the influence on the Bengali imaginative eye of Sanskrit literature, of classical Indian music, and of European writings, paintings and the technology of the camera. Two major literary and intellectual figures should suffice as evidence, Tagore and Nirad Chaudhuri. Tagore's Chhinnapatrabali, a collection of letters written during the 1880s and the 1890s when his duties as landlord made him traverse East Bengal by boat, can be easily read as one of the first literary efforts in modern Bengali prose to describe the landscape deploying the idea of a western and painterly 'perspective'.

Some people's minds are like the wet plate of a photograph [the italicised words are in English in the original]; unless the photo is printed on paper right away, it is wasted. My mind is of that type. Whenever I see a scenery, I think I must write it down carefully in a letter.19

Our boat is anchored on the other side of Shilaidaha in front of a sandbank. It is a huge sandbank, a vast expanse, no end in sight, only the river appears as a line from time to time - there are no villages, no humans, no trees, no grass sturning the head to the east one can only see the endless blue above and down below an infinite paleness, the sky is empty and so is the earth, a poor, dry and harsh emptiness below and a disembodied, vast emptiness above. Nowhere is to be such desolation [in English] seen.20

I had sat outside barely for fifteen minutes yesterday when massive clouds collected in the western sky - very dense, disorderly clouds, lit up here and there by stealthy rays of light falling on them - just as we see in some paintings of storms?

Nirad Chaudhuri's self-conscious discussion of the Bengali landscape and his experience of it in the 1920s, shows the same changes to be still under way a few decades on. Chaudhuri's discussion is extremely aware of the recent origins of the practice

thing was", writes Chaudhuri, "that the Bengalis taken collectively showed no awareness of their natural environment, not even of their great rivers" and adds: "Generally speaking, when modern Bengalis acquired a feeling for the beauties of nature they showed it by a vicarious enjoyment of those described in the source of their new feeling, namely, English literature. Thus English and Scottish landscapes in their imaginative evocation became the staple of the enjoyment."22 Chaudhuri's own experience of coming to grips with the landscape of Bengal shows the modernity of the landscape-question in Bengali history Indeed, one could argue, nationalist perceptions of the Bengal landscape owed much to the labour of cultural workers such as Chaudhuri himself. He writes:

when I grew up I began to put this question to myself, does the Bengali landscape have any beauty .? I could not be sure ... But one day I had an experience which I can regard as conversion in the religious sense. That was in 1927 during that very last stay at Kishorgani I was always in the habit of taking long walks, and on that day I was strolling along the railway embankment northwards from Kishorganj After I had gone about three miles I suddenly noticed a homestead with half-a-dozen huts to my left, which was silhouetted against the sunset. There was a long pool of water by the side of the railway line ... There was the usual pond before it.. The whole scene was like one of Constable's landscapes, and I can confirm the impression after seeing the Constable country...I do not know if other Bengalis have felt like me, but for me it was like enlightenment bestowed in a blessed moment 21

It would be untrue to give the impression that this was all there was to the way the city/country question was given shape in Calcutta's urbanism. The nostalgic, folksy image of the village never died. In the early decades of the 20th century, however, after the emotionalism of the Swadeshi days had subsided, 'realistic' novels such as Saratchandra Chatteriee's Pallisamai helped develop yet another stereotype of Bengali rural society. Bengali villages, so often described as abodes of peace, now became the obstacle to Bengali enlightenment, dens of factionalism, casteist exploitation and malarial diseases, all making them deserving candidates for nationalist developmental work.24 Yet the softer image, located in the lush water-washed landscape of East Bengal, remained and was celebrated, for instance, in Jibanananda Das's sonnets Rupashi Bangla [Bengal the Beautiful] written in the 1930s (though published posthumously in the 1950s and soaring in popularity during the 1971 liberation war of Bangladesh).25 It

of seeing Bengal as beautiful. "The curious • is clear that by the time Bibhutibushan Bandyopadhyay's novel Pather Panchali was published, in 1927, it spoke to a dearly held urban image of the 'generic Bengali village' - a place, true, marked by suffering, poverty and sometimes a meanness of spirit but yet the abode of some very tender sentiments of intimacy, innocence and kinship. This was the picture of the Bengali village as a modern cultural value. The exact geographical location of the village of Nischindipur, the village where the story of Pather Panchali unfolds, was not relevant to the way Bengali readers appreciated the story. As Suniti Chatterjee, the noted linguist, said of the novel: "I have always lived in Calcutta but I have affection for the village. I feel that Nischindipur is familiar to me. Likewise, Apu and Durga's story seems to be our own, even though we have grown up in the city".26

It is not surprising, then, that journeys to East Bengal, to the countryside - should be a major feature of the literature dealing with the beauty of the Bengali landscape. For, quintessentially, that perception was urban. Tagore's eyes often frame the countryside through the window of his boat: "Now, after a long time, being seated near the window of my boat [English in original], I have found some peace of mind. ... I sit in a reclining position by the side of this open window. I feel the touch of a gentle breeze caressing my head. My body is weak and slothful having suffered a prolonged illness, and this nursing by nature, calm and soothing, feels very sweet at this time".27 Travel, by boat, is a major motif in Nirad Chaudhuri's appreciation of the Bengali landscape as well:

Consciously, I never credited Bengal with beautiful landscapes Yet when I passed through one or other of most commonly seen aspects of the Bengali landscape, for instance, a great river (and I have journeyed in boat and steamer on all the big three), the rice fields either in their green or in their gold stretching out to the horizon and billowing under strong winds, the bamboo clumps or the great banian tree, there was not one occasion when I did not lose my sense of being a viewer only and became one with these scenes like Wordsworth's boy. I shall never forget one such occasion. It was April 14, 1913, that I was going from Goalundo Ghat to Narayangani in the river

steamer Candor... I had just read about Turner's paintings in a book... The glow of his paintings, visualised by imagination, seemed to lie on the wide landscape all around me.28 Tagore, of course, was a landlord visiting

the countryside on business, and Nirad Chaudhuri, a salaried clerk in the city of Calcutta, visiting his familiy in East Bengal during holidays. But in either case, as in the case of so many other members of the Bengali bhadralok, it was a matter of accommodating the village and the country into the rhythm of an urban life, where the village and holidays stood in relationships of intimate association.

Chhere Asha Gram repeats these associations between urban life and images of the pastoral that informed the Bengali sense of a beautiful life which, it was said, was never theirs in the city. These themes appear in Chhere Asha Gram not as so many masterpieces of Bengali writing but as hackneyed expressions derived from Tagore and other sources, short cultural cliches, pieces of literary kitsch, aimed at the shared nostalgia of the city's bhadralok. In other words, this memory places the idyllic village squarely in the middle of the 'city-country' question as it had evolved in Calcutta's urban culture. Here, too, the beauty of the village is often tied to travel by boat and to the rhythms of holidays in urban working or student-lives, the holidays coinciding with religious festivals. I reproduce again a long string of quotations to illustrate how pervasive the sentiments are.

I remember the days of autumn. How long peop'e would wait the whole year for this season to come. And what preparation! The people who lived afar were returning home. Everyday new boats would come and lay anchor on the banks of the Dhaleshwari. We boys would crowd the [riverside] For a few days, Gangkhali was full of people. And everybody would renew their acquaintances (Shabhar, Dhaka, p 12).

The steamers on the Narayanganj line would leave Goalundo... and stop at Kanchanpur. The wind on the Padma would carry to our Stationghat the sound of the siren of departing steamers. And the sound would be heard in other villages across the Ilamora fields and the tanks of Aairmara... all the people of this district knew that their relatives who lived in exile in Calcutta were coming by those steamers (Notakhola, Dhaka, p. 47).

We are educated, we have tasted the intoxication of the city. We have lost our caste. That is why we feel international. Without tap-water and machine-made bread nothing tastes good to our palate... The door of returning back to the village has been shut for ever in our lives (Binyapher, Mymensingh, pp 68-69).

We had to take the ferry across the Jamuna after alighting at the Sirajganj ghat, and then take a boat to our village. I can clearly recall, even in darkness, the picture of the sun setting on the river. When the young sun, bright and bearing [the message of hope], appeared in the body of the sky, my head would automatically bow at its feet. I found life in the water of the river and youth in the sun... The taste of the gravy of rice and curried Hilsa fish that I used to have at the Sirajganj Hotel those

days still lingers in my mouth like the taste of nectar...(Sankrail, Mymensingh, pp 89-90).

My [village] Gomdandi, surrounded by the endless beauty of nature, had only green on all four sides. Whenever we could get over the seduction of the artificial environment of the city and find refuge in the green lap of the village, our mother, we would forget all the sadness and suffering of city-life... Travelling on boats with white sails along the Karnaphuli in the month of Bhadra and Aswin, when the river over-flowed both its banks, the exiles' minds would experience thrill at the very sight of the paddy fields... (Gomdandi, Chittagong, p 196). The puja[-holidays] are close. At this time of the year, every year, the mind yearns to go to Shilaida[ha]. As soon as we got off at the Kustia station, our hearts would fill up with an immeasurable sense of joy [Shilaidaha, Kustra, p 286].

I specially remember today the days of the Durga puja. Every year I would impatiently look forward to these days. A few days before the puja I would leave Calcutta for the village. The distance seemed inexhaustible The moment I set foot on the village station after a long journey, I felt like a king. Who am I in Calcutta? I am only one among the innumerable ordinary men. In my village, the station-master at the very sight of me would ask with smile. 'So you have come back to desh?' (Phulbari, Dinajpur, p 306)

It was within this city/country division that the village appeared both as an ideal and an idyll, its idyllic qualities enhanced - in the experience of the writers and in their telling of their stories - by allusions to literature and festivals. Both of these allusions, as we have already seen, actually direct our attention to the city where this literature was produced and where the major Hindu festivals punctuated the annual calendar of modern work. But they also imaginatively endow the village with its 'folk' character, festivals being particularly important to the construction of the folk.29 The literary allusions are sometimes direct and sometimes buried in the very style of writing:

Whenever I could break the harsh and gloomy bonds of the city and placed myself within the affectionate and calming embrace of my mother-country, I would remember the truth of the great message of the Kaviguru [Tagore]... In a moment I would forget the insults, suffering and the weariness of the city. (Gabha, Barisal, pp. 111-12).

Today I am a man of Calcutta. But I cannot forget her in the dust of whose sari-wrapped tender soil I was born... The moment I get a holiday, I feel like running away to that village three hundred miles away. I wish I could walk along the tracks of that dream-tinged green village of Bikrampui

and sing like I used to as a child: 'Blessed is my life, Mother, that I have been born in this land.' [Tagore] (Bajrajogini, Dhaka, p. 4).

H

Where was the place of the Muslim - or indeed of people who were not Bengalis in this idyll? This Bengali home - that the village was supposed to be - was it without a place for the Muslims? The language of kinship is one of the means by which the Other is absorbed into the idyllic and harmonious village. The Muslims participated in the Hindu festivals and thus were narratively absorbed into the image of the eternal Bengali folk. The boatmen and other Muslims treated their Hindu passengers with civility, and are hence placed within the pleasures of the putative bonds of village-life Eventhe market-place is seen as an extension of this harmony (pp 203, 215). The imputed idyllic nature of this home helps to place in sharp relief the inexplicability of communal violence and the sense of trauma that the violence produced.

There was a woman who belonged to the Muslim community of a distant village We called her Madhupishi [auntie Madhu] It was said that she had no family. She would often come to our house. We were apparently all she had -- there is no counting of the number of times she would say this. Never did the thought arise in our minds that Madhupishi was Muslim. She would often bring for us presents from her house or fruits and herbs from the field. We would receive them with eagerness and joy. Not only this A group of Bihari people villagers from Bihar, 'had become people of this village, sharing our soul. Are they still there in my village? In our childhood we noticed that the Muslims' joy at Durga Puja was not any less than ours. As in the Hindu households, new clothes would be bought in their houses too. Muslim women would go from one neighbourhood to another to see the images [of Durga] (Shabhar, Dhaka, pp 8, 13)

The moment the college closed for the summer vacation, my mind would be restless to go to the village. Barisal is full of waterways. When would the steamer arrive at the Gaurnadi station? with what anticipation I would look torward to it. As soon as I reached the ghat, Shonamaddi, the [Muslim] boatman, would smile his ever-familiar smile and say, 'Master, so you have arrived? Come, I have brought my boat Of course, I knew that you would come today.' (Chandshi, Barisal, pp. 131-32)

The Goddess Kali was a live goddess in this region. People used to come from many distant villages to worship [her] for fulfilment of their desires. I have seen Muslim brothers make pledges [to the goddess] with folded hands... I cannot recall seeing an

instance of devotion to Kali that was so independent of caste or religion (Shonarang, Dhaka, p 58).

'Babu, so you have come back to the village?', asks the Muslim peasant out of an ordinary sense of ettiquette... A strong pungent smell assails my nostrils as I approach the house of Syed Munshi. He works both as a kaviraj [an ayurvedic doctor] and as a teacher. He got calls whenever anything happened to small children in our village There was no demand for 'visits' [fees] but often he would receive [gifts] of home-grown fruits and vegetables. Even today I consider them the closest of my relatives For so long we Hindus and Muslims have lived together like brothers - we have always felt a strong connection with everybody. . But today? (Dakatia, Khulna, p 258).

In this idyllic home it is the Muslim of he Muslim League who erupts as a figure of enigma, as a complete rupture from past, imodernist dream of 'junking the past' gone completely mad, a discordant image on a canvas of harmony. The following description of a Muslim man called Yaad Ali is typical.

They used to build the image of the goddess on our chandimandap [the courtyard of a well-to-do Hindu household used for communal worship]. Close to the time of the pujas, three potters would be at work late into the night, working by the light of lanterns. Until the time they were overwhelmed by sleep, a crowd of children .. would sit there making many demands [on the potters]: 'Brother Jogen, could you please paint my old doll? . My horse has a broken leg, Brother Jogen, could you please mend it?' 'You children, don't talk when it is time for work!' – Yaad Ali would scold the children from the other side of the courtyard '..Don't you listen to these rascals Mr Pal,

"...Don't you listen to these rascals Mr Pal, concentrate on painting, after all, this is all god's work", Yaad Ali would advise Jogen. But even before we left the village, we noticed that Yaad had changed. He is a leader of the Ansars now. He would not even say the name of a Hindu god, he now explains. Islam beautifully! (Kherupara, Dhaka, pp. 27-28)

The story of Yaad's transformation into in activist Muslim and the utter ncomprehensibility of that phenomenon to he authors of the essays of Chhere Asha Gram give us a clue to the problem of this liscourse of value within which the Hindu authors sought to place their Muslims prothers. These essays, being instances of public memory, eschew the low language of prejudice and produce instead a language of cultural value. The home that the Hindu refugee has lost is meant to be more than his home alone; it is the home of the Bengali nationality, the village in which in the 1880s nationalist writers had found the heart of Bengal. But in doing this they illustrate a fundamental problem in the history of modern Bengali nationality, the fact that this nationalist construction of 'home' was a Hindu home. It is not that the Muslims did not share any of this language - after all, the national anthem of Bangladesh is a song of Tegore's that powerfully expresses the nostalgia I have discussed. The point is rather that for all of their talk of harmony between the Hindus and the Muslims, there is not a single sentence in the memories described in Chhere Asha Gram on how Islamic ideas of the sacred might have been of value to the Muslims in creating their own idea of homeland or indeed how they might have helped create a sense of home for Bengalis as a whole. The Muslims did not do this thinking, but nor did the Hindus. There are passages here that even saw - at a time when the Muslims of East Bengal would have been savouring their newfound independence (not always nicely) -Eastern Bengal as dead without a vibrant community of Hindus;

The villages, markets, settlements of East Bengal are today speechless and without life, their consciousness wiped out by the horrors of the end of time [kalpanta: the measure of a day in the life of the supreme Hindu god, Brahmal, In that land of 'thirteen festivals in twelve months' [a Hindu-Bengali saying], no conchshell is sounded marking the advent of the darkness of evening, no utulation in the hesitant voice of the housewife is to be heard on Thursday evenings, the time for the worship of [the goddess] Lakshmi. The ektara [a musical instrument] is silent at the gatherings of the Vaisnavas, the string of the gobijantra [an instrument played by bauls) has perhaps acquired rust, while mice and cocroaches have probably built their worlds cutting into the leather of the drums of the devotees of Harisabha [meeting place for Hindu devotional singing (Kherupara, Dhaka, p 22).

In other words, without the sense of a Hindu home, East Bengal is simply reduced to an eeric emptiness!

This is where Chhere Asha Gram leaves us, with the central problem of the history of Hindu-Bengali nationality. Hindu nationalism had created a sense of home that combined sacredness with beauty. This sacred was not intolerant of the Muslim. The Muslim Bengali had a place in it created through the idea of kinship. But the he me thus created was a Hindu one in which the non-Muslim-League Muslim that is, the Muslim who did not demand Pakistan - was a valued guest. Its sense of the sacred was constructed here through an idiom that was recognisably Hindu. What had never been thought about was how the Hindu might live in a home that embodied the Islamic sacred. What would it mean to be a guest in a home that belonged to the Muslims, for the demand for Pakistan had indeed been based on the idea of a land that manifested the Islamic sacred?

The Hindu narratives, both in Chhere Asha Gram and elsewhere, try to find resolutions to this question in real and imagined emotions of kinship. An anecdote recounted in the reminiscences of Mrinal Sen, the noted film-maker, demonstrates in a telling fashion both the complexity and the impossibility of resolution of ethnic conflict within this narrative strategy. Sen grew up in the 1920s and 1930s in a nationalist Congressite family in Faridpur. His family did not shun the company of Muslims. Once, says Sen, his oldest brother, then a student of class 10, showed their father a poem written by a Muslim boy from his class. Moved by the writing, Sen's father encouraged his son to invite this boy home. The young Muslim poet came, befriended the family and, in Sen's words, became one of them:

My eldest brother brought his friend home. The boy turned up with his feet covered with dust, a pure peasant-boy. The nickname of this poet was Sadhu. He would move in and out of our household as though he was a boy of this family. It was after I had grown up a little more that I came to know that he was not our brother. ³⁰

This poet, Sen reveals, was none other than the famous and gifted Muslim-Bengali poet Jasimuddin. But Sen's narrative lets us see how a crisis set in in this bond of putative kinship as the demand for Pakistan gathered pace. Jasimuddin was not unaffected by the sentiments growing in the minds of many Bengali Muslims. Nor, from an opposing point of view, was Sen's father. Sen writes:

There were no communal troubles in Faridpur, But Hindu Muslim conflict was on the rise in other places and had an impact on Faridpur as well. The grown-ups had to be a little careful therefore. I noticed that a certain Hindu-ness asserted itself in my father whenever there was a communal conflict somewhere else. There would be furious arguments and counter-arguments. And Jasimuddin would argue taking the side of Muslims One day Jasimuddin said to my mother, 'Mother, if it is true that I am one of your sons, why do you feed me scating me outside? Why is it that you never let me sit with your sons to cat from the same plate?'31

It is Sen's narrative resolution of the emotional impasse that this moment creates which shares something of the spirit of the essays in *Chhere Asha Gram*. He continues:

My mother found herself in difficulty. What Jasim said was not untrue after all. But mother was helpless. She explained to him

that she had no objection to having him sit inside while feeding him but the servants of the household would not accept this arrangement. Her eyes glistening with tears, she said, 'Sadhu, you may not know this, but it is me who washes up after you.' 12

This is a poignant moment in Hindu-Bengali liberalism. The Bengali-Hindu mother, who acts as a critical nodal point in the affective structure of kinship, speaks here for Hindu liberalism in acknowledging the call for justice in the grievance of the Muslim whom she has recognised as her son. At the same time, she pleads helplessness, blaming - like men have at many critical moments in the history of modernity anywhere - tradition and unreason, now allegedly embodied in the servants of the household. But she does not stop there. Tearfully, she makes a claim on the Muslim's sentiment: the mother has both accepted and transgressed difference for the sake of her feelings for her Muslim son. Why would not the Muslim reciprocate?

This, in a sense, is the question that reverberates through the essays in Chhere Asha Gram. Yet, however full of pathos it may be, there is a deafness to the Other that structures this question from within. Jasimuddin, the Muslim in Sen's story, was declining the role of a good guest in a household that defined itself as Hindu. He was asking for a change of the rules which defined hospitality and which decided the question of who was in the position of offering it. Was he within his rights to do so? It is this question that goes unacknowledged and undiscussed in the essays under discussion. Chhere Asha Gram stands witness to a historic Hindu-Bengali deafness to the call of the Other. This deafness is as constitutive of ethnic distance as may be the more explicit elements of violence. It is a mark, indeed, of one's participation in the politics of ethnicity. To be deaf to the call for justice in the Muslim demand for a home for their own imagination of the sacred, was to express prejudice, however silent that expression may have been. It is in this sense that what spoke in public life of value in the essays in Chhere Asha Gram also spoke, ultimately, of prejudice. In treating the Bengali Muslim's ethnic hatred as something inherently inexplicable and hence profoundly shocking, it is their own variety of prejudice that the essays refuse to acknowledge. I do not say this in a spirit of blaming the indus, in particular those displaced, for their cup of suffering was more than full. I say this to underline the intimate relation that necessarily exists between values and prejudice, for this relationship, when unattended by criticism, plays a role in producing the deafness that - in moments of crisis - stops us from hearing what the other might be saying about ourselves.

Notes

[Grateful thanks to my friend Gautam Bhadra for drawing my attention to Chhere Asha Gram and for lending me his copy of it, and to him, Anthony Low, Lawrence Cohen, Tom Laqueur, Tom Metcalf, Anne Hardgrove and David Lloyd for helpful discussions of the issues raised here. Some of the ideas here were presented to a seminar at the Nehru Memorial Library on the Indian partition convened by Anthony Low and Ravinder Kumar in 1993 My thanks also to the participants at this conference. An earlier version of this essay will appear in a special issue of South Asia (New England, Australia) being guest-edited by Anthony Low.]

Ladies and Gentlemen,

I heartily welcome you to the Forty-first Annual General Meeting of your Bank in the city of Chandigarh

Indian Economy

The Indian economy performed extremely well during the year The economy grew at a high rate of 7 per cent (latest CSO estimate) during the year, with the industrial sector surging further ahead with a growth of 12 per cent. Foodgrains production was of the order of 192 million tonnes and public food stocks soared to a level of 24.5 million tonnes in March 1996. Gross domestic savings rate set a new record of 24.4 per cent of GDP. Exports registered a satisfactory growth rate of 21.4 per cent in Dollar terms while the current account deficit as a percentage of GDP stood at a sustainable level of 1.5. After two years of double digit inflation, the rate fell to below 5 per cent.

Banking Environment

The growth of deposits of all scheduled commercial banks, though somewhat sluggish initially, picked up slightly in the latter part of the year. The non-food credit of all scheduled commercial banks rose substantially and the incremental non-food credit deposit ratio reached a historically high level of 94 6 per cent The moderation in deposit growth, coupled with the unusual credit expansion, created liquidity problem for the banks. The exchange value of the Rupee experienced some degree of volatility at times The activities in the capital market were also on a low key Nonetheless, through the studied intervention of the monetary authorities the system was brought back to normal. To boost the equity market the SEBI initiated several measures, which included the Depositories Ordinance (1995), permission to offer custodial services and many other investor protection measures The money market also witnessed the entry of Primary Dealers in gilts, and tracks were broadened to usher in the Money Market Mutual Funds in a bigger way. These developments present new challenges as well as opportunities to the banking industry

Working Results 1995-96

Your Bank performed well during the year. The net profit of Rs 831 60 crore represents an increase of 16 2 per cent over the last year's figure of Rs 715 50 crore. This profit has been achieved after providing for a sizeable investment depreciation due to the altered yield pattern. The overall satisfactory performance of your Bank is manifest in the improvement of key financial ratios which are internationally used to evaluate the performance of commercial banks. The Return on Average Assets has gone up from 0 563 per cent in 1994-95 to 0 598 per cent in 1995-96, and the Return on Equity has improved from 15 13 per cent to 15 22 per cent Profit per Employee has increased substantially to Rs 35 703 from Rs 30,829 in the previous year Besides, your Bank's Non-performing Assets are on decline. This is more as a result of higher recoveries than write-offs, which is a heartening feature The Book value of your Bank's share stood at Rs 115 25 as on March 31 1996 Your Bank's performance has, thus, confirmed its position as the market leader in the Indian banking

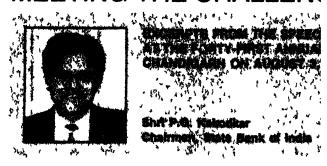

Managing Liquidity

The second half of 1995-96 witnessed severe liquidity crunch Your Bank was no doubt, affected by this However, the Bank put in its best endeavour to meet all the genuine demands for credit to the maximum extent possible, even by mobilizing high-cost funds from the money market comprising CDs, Call money and also FCNR(B) deposits. This was done to ensure that the overall national objectives of achieving higher industrial and economic growth do not suffer. The Bank also went slow in implementing the across-the-board reduction in credit limits of its large borrowers for the same reason.

Deregulation - Some Critical Implications

In a deregulated environment, where a bank's accountability and responsibility towards millions of its shareholders, depositors

MEETING THE CHALLENG

and other creditors increase manifold, it is essential that the bar remains safe and sound. The unique and provenly most powerfitool to make banks safe is capital. Your Bank is comfortab placed with a capital adequacy ratio of 11.6 per cent, which much above the internationally accepted minimum benchmai of 8 per cent, also stipulated by the Reserve Bank of India. The challenge for the Bank, however, is not only to ensure capital adequacy but generate acceptable returns to the shareholder: who, understandably, have high expectations. A refocus conhanced profitability will be the cornerstone of business plar of your Bank and, accordingly the goal of your Bank has bee modified as "profit with growth" instead of "growth with profit" a hitherto.

With a view to translating this goal into action the top leadershi of State Bank of India Management, Officers' Federation and Sta Federation met in a Workshop on March 29 and 30 1396, a Hyderabad and deliberated jointly. In the face of challenge thrown domestically and internationally, all the parties unanimousl committed themselves to safeguard zealously the premier positio of the Bank.

Managing Risks

Your Bank's approach to manage risks has always been - an will continue to be - professional Banks, normally, encounte two types of risks in their business operations, viz market risk and credit risks. In order to manage effectively interest rate ris and risk arising out of asset liability mismatches, the process of asset liability management has been formally initiated b creating an Asset Liability Management Committee (ALCO) a the Corporate Office The role of ALCO has been primaril directed towards formulating a balance sheet policy for your Bank based on a detailed assessment of risk-return trade offs. As fc the credit risks, our existing expertise has been further strengthene by instituting a specialised Department at the Corporate Offic of your Bank. This Department is exclusively managing the siz and risk profile of the Bank's credit portfolio in order to lim concentrations in terms of risk, quality, geography, industry produc maturity and large exposure aggregates. With appropriate ris assessment and management mechanism in place, your Ban is well positioned to accelerate a turnaround in asset quality an earnings momentum

Need for Greater Autonomy

Functional autonomy and operational flexibility are the sine qu non for successful business operations in a deregulate environment Strategic business decisions must be taken withou undue interference from the State or the political system. This philosophy has been the cornerstone of the recommendation of the Narasimham Committee to rejuvenate the banking sector No doubt, risk-banking is fraught with probabilities of failures. Risk management policies and techniques can be more refine and operated in a more effective and transparent manner if the

S OF THE 21ST CENTURY

Livered by the Chairman Shri P.Q. Kakodkar Herai, weeting of the Shareholders Held at

confusion emanating from dual control is eliminated. While there can be no objection to errors arising from procedural oversights or gross negligence being punished, those from judgements and decisions need to be examined with absolute professional approach.

New Business Horizons

The emerging environment offers ample opportunities for your Bank to venture into new and profitable areas. Your Bank has always been the first and foremost to enter new areas of business. Big ticket leasing and project finance are financial services which will be in great demand on account of the thrust on infrastructure development in the country. Your Bank, has created specialised Strategic Business Units (SBUs) directly under the Corporate Office to cater to these services These SBUs, acting as banks within the Bank, with distinct profit goals, will be major profit centres in the coming years. The debt market and, in particular, the gilts market, is expanding very fast in the country and the secondary market segment is being consciously groomed. To capitalize on these opportunities, a specialized subsidiary, SBI Gilts Limited, has been set up and has become operational on July 1, 1996. SBI Gilts, acting as a primary dealer in gilts, is expected to emerge as a dominant player in the gilts market in the years to come. A new subsidiary to deal exclusively in sales and distribution of shares and debt instruments is also being planned and will become operational soon on receipt of necessary clearances. Proposed to be named as SBI Securities Limited. the new subsidiary will be active in broking, market making, trading and portfolio advices and will complement the activities of the SBI Capital Markets Ltd., the existing merchant banking arm of your Bank. The Government of India is planning to encourage tourist traffic in the country in a big way in the years ahead. To capture business opportunities arising out of this activity, your Bank is also contemplating to enter travel-related financial business. These new activities which your Bank has undertaken or proposes to undertake have been carefully planned keeping in view the requirements of your Bank's discerning clientele and will form a powerful springboard for future and contribute substantially to the Bank's bottomline.

Technology - Key to Future

Banking can no longer remain divorced from the rapid developments that are taking place in the world of information technology. Your Bank, realizing the paramount importance of technology, has plans to invest heavily in this area. It has, already on hand, plans to computerize fully 1,000 branches by March 1997. Our investment in technology will, of course, go beyond mechanizing operations of branches and will extend to offering technology-clriven products and services to larger segment of customers.

Customer Focus

A distinguishing feature of the current banking environment is the growing expectations of the bank customers. This change

has been brought about by the forces of competition and technology. Today's customer is far more discerning and quality conscious than he was, say, a decade ago. As a progressive bank committed to customer satisfaction, your Bank welcomes this change. Howsoever hard a bank may try to meet customer expectations, there will always be occasions for customer grievances and, hence, an independent authority to look into such grievances is welcome. I am happy to note that the Reserve Bank of India has instituted a scheme known as the Banking Ombudsman Scheme, It is aimed at protecting the interests of customers and redressing their grievances. It will be the endeavour of your Bank, however, to ensure that its customers are not required to approach this forum and all their genuine grievances are settled amicably within the Bank, as much as possible.

Priority Sector

As you are aware, your Bank has been playing a pioneering role in lending, particularly to the priority sector, constituting agriculture, small scale industries and small business, since the late fifties. Even in the changed environment, your Bank is equally committed to meet its social responsibilities by adequately meeting credit requirement of these sectors. The progress under the priority sector has been constrained mainly by the lack of sufficient absorption capacity in the rural areas for the finance provided to the activities under the relative schemes. To bring about any major quantitative change in the priority sector credit, what is required is an enlargement of the conventional definition of the priority sector credit which has become time-worn. For instance, export credit by banks could be counted towards priority sector credit. The need to establish an alternative benchmark to measure the performance of banks in lending to the priority sector has been voiced in the past also. The present system of linking priority sector lending to the net bank credit as at the end of the financial year is not a very sound proposition for two reasons - first, the quantum of priority sector advances to be made during the year remains indeterminate and secondly, there is generally a spurt of large advances towards the end of the financial year. There is thus a need to have a pre-determined level of priority sector advances to be achieved each year which is feasible if such advances are linked with the level of net bank credit as at the end of the previous year.

From a long-term perspective, a relook at the entire rural credit system and structure is warranted. In this connection, the Government may have to reconsider a proposal earlier mooted by the Narasimham Committee. While proposing "rural banks" to be constituted as one of the tiers in the four-tier banking structure, the Committee observed that the operations of the Rural Banks (including RRBs) would be confined to the rural areas and their business would be to engage predominantly in financing agricultural and allied activities.

Proposed Euro Issue

Before concluding, let me make a brief mention here about your Bank's plans to tap the global capital market in order to strengthen its capital base. The Government of India has recently liberalized guidelines in respect of Euro-issues and it is now possible for your Bank to access the global markets on very favourable terms. The Euro-issue will augment the Bank's resources and will enable it to operate in the competitive environment on safe, sound and profitable lines.

bekly August 10 1996 2153

Democratic Transition and Challenge of Transformation

Ananta Kumar Giri

The globalisation of democracy as a form of more legitimate representative government has not been accompanied by genuine efforts to tackle the problems of democracy, or efforts to widen the universe of democracy in accordance with the historical changes taking place in social systems and in the light of a desired agenda of transformation. This article presents some of the crucial gaps in the theory and practice of democracy and suggests ways to rethink democracy as a prelude to a genuine transformative engagement.

But the democratic process does not exist, and cannot, exist as a disembodied entity detached from historical conditions and historically conditioned human beings. Its possibilities and its limits are highly dependent on existing and emergent social structures and consciousness. Yet, because the democratic vision is so daring in its promise, it forever invites us to look beyond, and to break through, the existing limits of structure and consciousness.

- Robert A Dahl (1989:312)

But the typological differentiation between man and overman no longer makes sense, if it ever did. For the overman constituted as independent, detached type reters simultaneously to a spiritual disposition and to the residence of free spirits in a social space relatively insulated from reactive politics. . If there is anything in the type to be admired. the ideal must be dismantled as a distinct caste of solitary individuals and folded into the political fabric of late-modern society. The 'overman' now falls apart as a set of distinctive dispositions concentrated in a particular caste or type, and its spiritual qualities inigrate to a set of dispositions that may compete for presence in any self. The type now becomes (as it already was to a significant degree) a voice in the self contending with other voices, including those of resentment.

- William Connolly (1991:187)

DURS is an age of democracy. Democracy is a form of government, characterised by elections and the installation of a representative' government, has been becoming a global phenomenon. The fall of he socialist world, and domestic and global changes in Latin America, Africa, and the west Asia have brought democracy to places ind shores where it was undreamt of a few rears ago, giving people a taste of freedom But the globalisation of democracy as a form of more legitimate representative government nas not been accompanied by genuine efforts o tackle the problems of democracy - such is the tension between equality and liberty. he dictatorship of the majority, the actual as well as manufactured disinterest on the part of the so-called cruzens not to participate in he electoral process resulting inasmuch as 50 per cent of them not fulfilling their constitutional obligation to vote¹ - the problems highlighted by no other than the nost thoughtful observer of democracy as i practice, Alexis de Tocqueville - and to widen the universe of democracy in accordance with the historical changes taking place in social systems as well as in the light of a desired agenda of transformation. The present article aims at presenting some of the crucial gaps in the theory and practice of democracy and suggests ways we can rethink democracy as a prelude to a genuine transformative engagement.

The demise of the socialist systems has led to euphoria on the part of the advocates of market and western models of democracy. But a majority of our legislators and interpreters have not subjected the existing arrangement of democracy in advanced industrial countries to a critical scrutiny nor they have looked critically at the process of political and economic liberalisation in the peripheries. In fact, a narrow definition of both economy and politics in the existing discourse of democracy has reduced it to just a formal kind of political arrangement, whose most important function lies in ensuring regular (supposedly) legitimate reproduction of the existing system. But factors which are considered extraneous to the theory and practice of democracy such as economic inequality between citizens (which play a determinant role in the very process of politics), the deprivation of the actors, the immorality of the professionals who constitute an unquestioned elite in the management of social systems, etc. have not been given systematic consideration in the agenda of democratisation But issues such as economic equality, professional morality, and entitlement of citizens are important for democracy at a contemporary stage, which Robert Dahl (1989) calls 'third democratic transformation'. It is perhaps for this reason that Dahl writes: "In an advanced democratic country the economic order would be understood as instrumental not merely to the production and distribution of goods but to a much more larger range of values, including democratic values" (1989:325). Therefore, economic democracy is an important theme which is conspicuous by its absence in our contemporary obsession with entrepreneurial rights and freedom of choice, and requires serious attention from those who are genuine about democracy.

At present, market economy is being portrayed as a natural ally of democracy. But, as markets are being promoted as holding the panacea to all human ills, their advocates forget the challenge of making markets 'people friendly' in their zealous drive to make governments market-friendly [Streeten 1993]. Few realise that "our current version of

market institutions jeopardise freedom on both a large and a small scale"; and even fewer are interested in articulating an "alternative institutional definition of market" [Unger 1987:480, 482].2 Even after the supposed death of Marxism it is true that "we find the legal tools of privilege hold over capital reciprocally linked, through a series of mediating institutions and preconceptions, to the forms of privileged access to state power" [Unger 1987:490]. In advanced capitalist societies, the stability of the established institutional arrangements, including the arrangements that define markets, depends upon a "long-standing social demobilisation" (1987:491) - not very different from the viled Soviet case. For Roberto Unger, such social demobilisation is being encouraged and even deliberately sought "by the constitutional organisation of government" [Unger 1987].

Unger provides us a blueprint of the desired economic reconstruction that should be an integral part of the democratisation process. In order to reorganise the economy, Unger emphasises the need for the creation of "the rotating capital fund and its democratic control" as well as on decentralisation and the recovery of the small-scale as a unit of creative economic production. Unger, like Streeten (1993), believes that the state has a moral responsibility to preserve the smallscale (which is subject to the threatening logic of international capital) and create conditions for its better functioning in the contemporary context. This retrieval of the small-scale, which is not meant simply for museum display, has to be accompanied by institutional encouragement towards decentralisation. upholding the "broader commitments of empowered democracy" rather than merely handing over decisions to local elites [Unger 1987:475]. Its objective is no less than facilitating "the self-organisation of society outside government" (1987:476). "Decentralisation refers, at a minimum, both to the number of agents who are able to trade and produce on their initiative and for their. own accounts and to the extent of their independence" (1987:503). An empowered democracy, taking decentralisation seriously, encourages "both more economic deconcentration and more innovation in the organisational form of production and exchange..." (1987:383). It must encourage "variety in the ways of doing business, and organising work" and multiple strategies of

- 17. Y

production and reproduction – including those which are not guided by market and follow the idioms of its exchange – rather than subject them to the control of the market [Giri 1993c].

In this context, Unger's idea of rotating capital fund also ought to draw the attention of those who look at democratisation as promotion of market in the economic sphere as well as those who look at democracy as a process of seeking for total transformation. Unger argues that the key idea here is the "breakup of control over capital into several tiers of capital takers and capital givers" [Unger 1987:491]. For instance, "the collaboration among small-scale and mediumscale farmers on the basis of governmentsupported arrangements for the pooling of financial, marketing, and technological resources modestly prefigures the multi-tiered system of rotating capital allocation the programme of empowered democracy embraces" [Unger 1987:436].3

Such an agenda of economic reconstruction does posit a great deal of significance in the creative role of the government, which has almost been made a taboo in the current discourse of privatisation. This agenda is integrally linked with efforts to revitalise governments and transform the state.⁴

The agenda of economic reconstruction cannot dispense with public institutions, and takes seriously the task of enhancing the 'functioning and capability' of individuals through welfare programmes, which are meant not to reduce them into clients but transform them into agents of well-being and freedom Isce Sen 1986, 1989, 19911. Therefore, the neo-liberal view that "in any government's war on poverty, it is poverty that always wins" [Streeten 1993:1284] cannot be allowed as an excuse to disband the welfare functions of government since the ultimate justification of such welfare engagement lies "not on grounds of social justice or human needs, but on grounds of human capital formation, of reducing barriers to income-carning opportunities, and of promoting social stability" (1991 1284) In fact, a stress on functioning and capability of individuals, instead of on the discredited modes of justification such as the fulfilment of basic needs can help the government "struggle against the tendency of some of its constituents to adopt a clientelist attitude to state..." [Unger 1987:435].

COLLECTIVE MOBILISATION AS COLLECTIVE CREATION

Imagining Alternative Institutional Arrangements

The agenda of economic reconstruction briefly outlined above requires building up of new institutions. For realising the programme of empowered democracy it is not "enough to change the way in which we describe and explain the formative contexts of social life; it is also necessary to imagine institutional arrangements now available in the world" [Unger 1987:365]. But this requires a shift in the way we think about institutions, namely, institutions as legal entities. For this, among other things, we

need to make a shift from the model of analytical law that provide the foundational vision to modern institutions. For instance, David Apter argues that now there is a need to make a move from 'law as an analytical discourse' to law as an emancipatory and enabling one.5 Institutions of a democratic society ought to be founded upon a broader conception of law and rights whose model of law "cannot be confined to the realm of criminal justice, as Herbert Spencer and the state minimalists would prefer" [Whitehead 1993a:1257]. In the agenda of an empowered democracy, law "must be expanded and adapted to govern the very different issues raised by the welfare state and the mixed economy - to universalise full citizenship and therefore, Bobbio in From Structure to Function regards shrinkage of the scope of public law as an indicator of social decay' [Whithead 1993a]. Insofar as the realisation of full citizenship is concerned, it is important to realise that "citizenship does not stay within the confines of the political" [O'Donnell 1993: 1357]. The inherently public dimension of private relationships is violated when, for example, a peasant is de facto denied access to the judiciary against the landowner. This 'private' right must be seen as no less constitutive of citizenship than the 'public right' of voting without coercion" [O'Donnell 1993]. "Even a political definition of democracy...should not neglect posing the question of the extent to which citizenship is realised in a given country" (1993:1361).6

Speaking of law, citizenship, and institutionalisation of democracy. Unger argues that it is essential to grant citizens in an empowered democracy immunity rights and destabilisation rights. Unger's discussion of rights is part of his argument that economic and social reconstruction must be integrally linked with efforts to create a new constitution. The same argument is also offered by Claus Offe and Ulrich Preuss who emphasise upon "new constitutional procedures which will help to improve the quality of citizens' involvement in the democratic process" [Offe and Preuss 1991:170]. While "immunity rights protect the individual against oppression by concentrations of public or private power, against exclusion from the important collective decisions that influence his life, and against the extremes of economic and cultural deprivation", "destabilisation rights protect the citizen's interest in breaking open the large-scale organisation or the extended areas of social practice. ."[Unger 1987:524, 530].7

Beyond Institutionalism

Bhikhu Parekh has argued that "strictly speaking liberal democracy is not representative democracy but representative government" [Parekh 1992.167]. In fact, democratisation has been a statist agenda and even the institutionalists in the discourse of liberal democracy have not gone beyond the state and taken seriously the work of culture and communities [Apter 1991]. In the words of Apter: "Democracy tends to separate the

state from society at a decision-making leve even as it becomes closer to it in terms o public support. Insofar as this renders the content of politics relatively empty of meaning; it becomes precisely what critical theorists consider false consciousness" [Apte 1992:166]. In this context, the Latin American experiment of bringing back community to the discourse and practice of democracy deserves our attention. Liberation theology and the base community movement in Latir America have striven to revitalise communities as locales of action, dialogue, and critica intervention. The search for lost community in Latin America has been accentuated by the disintegration that has taken place in society as a result of its globalisation and transnational integration [Lechner 1991].*

Of the Latin American experience, one observer tells us: "The majority of citizens in our countries prefer democracy to any other regime. In practical terms, this preference appears to be motivated by identification of democracy with the restoration of community" [Lechner 1991.548]. But the same observer thinks that since "community emphasises a monistic view of society which represses both particular interests and a comparison of alternatives" and does not permit a creative view of conflict "it is problematical whether a political culture of this kind can build a sound democracy' (1991:546). This objection also reminds us of the Indian debate on this issue and the same scepticism of liberals such as Ambedkar and Nehru towards the Gandhian agenda of making village community an unit in the democratic process. It is true that the "emphasis laid on the expression of the collective curbs any centrifugal movement' in communities but this cannot be the reasor for throwing the baby along with the batl water. The challenge here is to introduce the desired concerns such as 'creative view o conflict', 'recognition of pluralism' [Lechne 1991] and the issue of human rights within communities through the work o transformative movements.4

Building Communities as Transformativ Striving

It is here that Unger's plea for a transforme conception of community holds the key t the genuine dilemma that the above critic ha highlighted. For Unger, "a transformativ conception of community" constitutes "unifying theme of the cultural-revolutionar programme" [Unger 1987:560] For Unge the kernel of the revised ideal of communit is "the notion of a zone of heightened mutua vulnerability, within which people gain chance to resolve more fully the conflic between the enabling conditions of sel assertion .." (1987:562) Reconceptualism communities as zones of mutual vulnerabilit also helps us to reimagine and relive th familiar categories of modern democrac such as the 'public sphere' [Habermas 1980 and 'public spaces' [Melucci 1992] a communities of discourse rather than simple a locale for bringing the possessive individual for half an hour, only to disperse to their espective shells later. For Melucci (1992), consolidating independent public spaces—whose main function is "rendering visible and collective the questions raised by the novements" [Melucci 1992.72] and which i.e., this act of consolidation is a reflection of the "collective signifying processes in veryday life" (1992:71)—can go a long way a retrieving and creating community in complex societies where it does not exist as a natural datum

The reassertion of community in the nstitutional reconstruction of democracy has ilso a potential to creatively respond to the hort-circuiting of the flow of time that takes place in liberal democracy. "Democratic nstitutions generate time: for example, they space out future time in a schedule of successive elections" [Lechner 1991:546]. Thus, elections constitute the markers of time ind after elections, people in power usually orget the promises of a longer-time horizon hat they had given during the elections. While it is true that "democracy makes it possible to forecast the future on surer foundations than the de facto duration of dictatorship", it is also true that "liberal representation can cope with substantive complexity (interdependence) but not with temporal complexity (permanence of decisionmaking)" [Kitschelt 1993:25]. But culture and communities usually have a longer-time horizon than the state and the market and, in fact, they only hold the key to the resolution of the problem of contemporary 'space-time compression' [Harvey 1989]. Thus, it is no wonder that Lechner writes: "The time factor shows clearly that, over and above institutional difficulties, a reform policy comes up against obstacles which may be described as of a cultural nature. Paradoxically , the major challenges to democracy in Latin America come from the cultural context" [Lechner 1991:546].10

The revitalisation of the public space as an object of transformative seeking must go hand in hand with a recovery of public morality. The process of "consolidating democratic institutions and stabilising market relationships is not just a matter of extending the machinery whereby individuals are empowered to make autonomous decisions, it also involves the affirmation of a revised and elaborated code of conduct" [Whitehead 1993a:1248]. Here we can take note of the re-entry of public morality to the stage of modernity in general and democracy in particular [Whitehead 1993a; also see, Etzioni 1988; Giri 1993a; Habermas 1990]. For Whitehead, "one manifestation of this is the prominence of the religious sentiments emerging in the course of many democratic transitions, and the influence (at least in Latin America) of catholic social thought as a counter-weight to the doctrines of unfettered market liberalism" [Whitehead 1993a].11

Institutions of democracy must aim at providing transformative challenges to individuals so that it is not only their egoistic preference which becomes the criterion of accountability but their enlightened preference. Democratic institutions must refine and

~~~ ~~ ~

educate the preference of the actors and must create conditions for a new trend of 'enfranchising' where the conflict is not only between different social groups but between different kinds of desires - the "inner conflict between what the individuals themselves experience as their more desirable and their less desirable desires" [Offe and Preuss 1991:166]. The challenge is to build institutions which would create opportunity for refining one's preference since such preference learning is a democratic way of creating enlightenment within citizens - a moral resource, which is absolutely essential for institutions of transformed democracy. Institutions should "upgrade the quality of citizenship by putting a premium on refined and reflective preferences rather than 'spontaneous' and content-contingent ones. 12 ... Such reflectiveness may be facilitated by arrangements that overcome the monological seclusion of the act of voting in the voting booth by complementing this necessary mode of participation with more dialogical forms of making one's voice heard" (1991:170). At the same time, the challenge for those concerned is to strive towards building institutions which are transparent and accountable to people.13

In putting into practice an alternative institutional design, transformative movements have played and continue to play a significant role. Transformative movements. first of all, affirm the "primacy of institutional reforms over the redistribution of wealth and income" [Unger 1987:433], "By engaging people in conflicts and experiments required for the development of new institutions, the movements give them a focus of concern other than immediate redistribution. It thereby establishes a bond with ordinary working men and women stronger than the gratitude or love that people may be expected to show a paternalist welfare state" (1987:433). Exploratory movements contain germs of 'de-differentiation' "beneath a politics reduced to administration, and on the periphery of a highly mobilised economic system" [Bebermas 1984:25] and offer a "more complete experience of self-assertion through attachment than we can find in the everyday world of work and exchange" [Unger 1987:431]. According to Kitschelt, "some residues of direct democratic practice persist in the self-transformation of contemporary social movements, even though in a muted and constrained way" [Kitschelt 1993:23] when direct democracy refers to the process where "actors discover their common objective in a communicative process of political deliberation" (1993:20).

But prolif ration of critical social movements in advanced democracies does not meanthat movements can replace complex economic and political institutions. The emergent configuration in advanced democracies "indicates less a polarisation of different modes of participation and democratic decision-making than the opportunity for a new complementarity" (1993:28). Kitschelt helps us make sense of the contemporary predicament and possibility

vis-a-vis institutions and movements:

In advanced capitalist democracies, citizens' personal resources to engage in direct democratic practices have increased. At the same time, the scope and depth of policy issues that give rise to discrete point decisions vulnerable to challenge by social movements appear to have increased... Advanced democracies face the problem not of replacing complex political and economic institutions with social movements but of finding way to accommodate spontaneity, individuality, entrepreneurship, and responsiveness in a bureaucratic and commodified society [Kitschelt 1993:28].<sup>44</sup>

The challenge of building new institutions of democracy is nowhere more urgent than in the emergent transnational sphere. Democracy today is no longer confined either to the boundaries of the city state - as was the case in the first stage of democratic transformation - and to those of the nationstate as it was the case in the second stage of democratic transformation [Dahl 1989]. Democracy now is part of a transnational process since all societies are now part of a transnational world, characterised by the globalisation of their economies and polities. 'The proliferation of transnational activities and decisions reduces the capacity of the citizens of a country to exercise control over matters vitally important to them by means of their national government. To that extent the government of countries are becoming local governments" (1989:319). The democratic idea must be "adapted to the new change in scale" (1989:320). For Dahl, "the most obvious is to duplicate the second transformation on a larger scale: from democracy in the national state to democracy in the transnational state" [Dahl 1989].

But the existing practice of democracy is still bound to the models of state-centric discourse. Ours is the 'Age of Democracy' and now there is a global euphoria about the emergent democratic spaces in the east and in the south. But "nations are heralding democracy at the very moment at which changes in the international order are compromising the possibility of an independent democratic nation-state" [Held 1991:138]. Nation-states have usually been treated as self-contained units, but democratic theory and practice bound within the logic of the nation-state is incapable of preparing us to face the challenge of living in a transnational world. Democratic politics remaining fetishised, even fossilised, within the electoral politics of the nation-state, offers outmoded statist solutions to the global contingencies - be it global warming or global terrorism. While "the very process of governance seems to be escaping the categories of the nation-state" [Held 1991:147], "the state deploys... diverse set of objects to organise discourse" [Connolly 1991:210].

Connolly (1991) provides us a picture of the theatre of the nation-state playing out familiar responses to the contemporary global contingencies. The state receives a fund a resentment from those whose identity is threatened by the play of difference (such as represented by the terrorists and the welfare underclass) and then construct differences as the dangerous 'other' to protect identities they represent. Thus, electoral politics in advanced capitalist societies become a "closed circuit for dogmatism of identity through translation of difference into threat and threat into energy for the dogmatisation of identity" (1991:210). This process of scapegoating and the late capitalist state's culture of sacrifice is easily noticeable in its construction of terrorism and welfarism. The erasure of the external 'other' in the construction of terrorism coincides with the erasure of the internal 'other' in the construction of welfarism. Terrorism is now a global phenomenon which "challenges or supersedes legitimacy, explodes conventionality" [Apter 1987:42]. But the construction of terrorism in the discourse of the state provides an easy excuse to both the state and citizens. The state protects its sovereignty and veils its inability to modify its action while the domestic constituencies are provided the security of an agent of evil to explain the experience of danger. Construction of welfarism in the late-modern state also creates a 'culture of sacrifice' by constructing the welfare class as dependent and mefficient which "becomes a dispensable subject of political representation and an indispensable subject of political disposability" [Connolly 1991:208]. It is in this context that there is a need to build new institutions that enable actors and governments to resolve global contigencies which defy state boundaries democratically as well as address the so-called internal problems in a moral and universal manner.15

The inter-connectedness among societies and the rise of transnational processes, including global contingencies, which heighten the urgency of a global democracy has gone hand in hand with the evolution of social systems in the advnaced industrial societies. Social systems have become increasingly complex now, with science and technology becoming crucially important in determining their scale and organisation. At the same time, the rise of the complex systems in all domains of our everyday life has made professionals with expert knowledge of these complex processes important in not only managing these systems but also in determining their destiny. But the increasing systemic significance of professionals has not been accompanied by any institutional effort to arouse moral consciousness within them, not to use their expert knowledge and power for exploiting the ordinary people who do not have such power and knowledge. In fact, apart from legislat:on there has not been much effort to subject professionals to a public scrutiny as a result of which professionals have become the new demigods in the present-day world.

But the distortion that professionalism introduces in the work of a democratic polity is no less, and in fact more dangerous, than the factor of economic inquality. However, the existing practice of democracy has not taken adequate steps to come to terms with this threat to democracy. As Dahl cautions us:

"...I am inclined to think that the long-run prospects for democracy are more seriously endangered by inequalities in resources, strategic positions, and bargaining strength that are derived not from wealth or economic position but from special knowledge"[Dahl 1989:333]. Now important policy issues are so complex that not only the government seeks the help of the professionals to come to a satisfactory and convincing judgment but also the ordinary citizens themselves who "no longer understand what would best serve their interest" (1989:337). In the context of the complexification of not only social systems but also the issues which affect the actors of these systems the uncritical advocates of democracy have to recognise the gap in the existing practice, since "complexity threatens to cut the policy elites from effective control by the demos" (1989:335).

Thus, the challenge of institutional reconstruction at the contemporary phase of democratic transition is immense and our creative response would determine whether the contemporary democratic transition is going to be ephemeral or enduring. <sup>16</sup>

#### CHALLENGE OF SELF-TRANSFORMATION

The common sense that moral quality of citizens and their enlightened understanding is crucial to democracy becomes an imperative when we reflect upon the complexification of social systems. The complexification of social systems at the contemporary juncture is part of what Daniel Bell (1973) called two decades ago 'the coming of a post-industrial society'. Post-industrial societies are characterised by the proliferation of what Roger Benjamin (1981) calls 'collective goods', which requires an ability within the citizens to overcome the temptation to be a 'free rider' and to contribute meaningfully towards their creation, maintenance, and appropriate imagination. In fact, an 'enlightened understanding' '7 on the part of the citizens is essential to the idea of the common good. The same challenge for enlightenment and self-transformation seizes us when we are confronted with the need to expand democracy, for example, to a transnational universe, as discussed before.18

Thus it is not enough just to reiterate the familiar themes of citizens and civil society but to ask what is the model of man woman that underlies the aspired for citizenship in a democratic polity. If democracy, as Alain Touraine argues, "is not just a competitive market; it implies the ability of each individual to act as a citizen" [Touraine 1991:261] then the question that is often ignored is what is the model of citizenship that underlies the discourse and practice of democracy? Here it is important to realise that models of citizenship differ from one model of democracy to another. While liberal democrats look at citizens as "self-regarding individuals who experience political involvement as a burden to be delegated to a specialised group of professionals", organisational democracy looks at them as "other-regarding and therefore contributing to mass-parties" [Kitschelt 1993:20]. But it is only in the framework of a direct democracy that a new

model of citizenship is promoted when citizens are viewed as "other-regarding [bu at the same time] involved in politics as at opportunity for self-realisation and self transformation, not as a burden on one', time and energy" [Kitschelt 1993].

In direct democracy "an alternative definition of the spirit of the constitution emphasises an ideal of personality and psychological dynamic" [Unger 1987:575] For Unger, "the citizen of the empowerer democracy is the empowered individual. He is able to accept an expanded range of conflic and revision without feeling that it threaten intolerably his most vital material and spiritua interests" (1987-579). What makes hin participate in struggles is not just the urgto improve "the material circumstances of hi life but nature and structure of groups to which he belongs and even his pre-existinsense of personal identity" [Unger 1987]. A the same time, the citizen is prepared fo renunciation and has "learned the secret o how to be in [conflicts] but without bein entirely of them" (1987:579). But thi perpetual readiness for renunciation is no perceived as a sacrifice by the citizen not only because of "the guarantee of immunity affor ded by a system" but because of a spiritua commitment to transformation. In the word of Unger: "Its higher spiritual significance consists in the assertion of transcendence a a diurnal context smashing" [Unger 1987

But the citizen renounces not to mak himself a hero but to give herself mor meaningfully in this world, conceptualised a a perpetual celebration of the sacrifice c creation. An urge to share rather than t dominate rescues him from the vicariou pleasure and danger of "the aesthetic c empowerment" [Unger 1987:584]. It als frees him from the "corrupting associatio with the cult of leaders and of violence" sinc his "driving force is the desire to do justic to the human heart, to free it from indignit and satisty its hidden and insulted longin for greatness in a fashion it need not be fearful or ashamed of" (1987:585). 20

The ideal citizen is able to resolve th dualism between individual and collective rationality and embody in his transformativ striving the moral resource of reciprocit But this requires a change in the way we thin of actors, institutions and discourse. Th standard route here is one of Jualisn reduction and fixation and if 'reciprocity' the ideal and also the saving language the we would have to go beyond a reduction view of the relationship between individu and institutions, self and the other. Th challenge is no less than to work out transformative view of the self. In terms political theory the task is to realise that theory of discourse, when discourse t definition means only those utterances which have political significance, is not a theory. self-transformation21 and the language of nec is inadequate to describe the moral topograpl of the self. Democracy is not an instrument mechanism to satisfy human needs, who these needs themselves have been let loo from the beginning to be limitless, but

process of cultivating a more meaningful and caring self, where the development of the individual becomes a precondition for the development of society.<sup>72</sup>

Widening the Universe of Discourse: Self, Other and Beyond

In widening the universe of democracy the istarting point is a reflection of self, which strives to put food and freedom, and the local rand the global in the same space of transformative strivings. The challenge here tis to start with an alternative account of the uself, not simply as a locus of desire, utility, · and interest but as a seeker of transformation. But "providing an alternative account of the 1 self, however, has so far proved more difficult than critique. Part of the reason is that \*expansive democratic theories also suffer I from underdeveloped assumptions about the self' [Warren 1992:11; emphasis added]. Thus, we have to have a trans-I formative view of the self in order to widen V the universe of democracy. This is possible 2 only when we take the moral and spiritual f dimension within the self (which is usually d conceptualised as a mere functional role and r a sociological individual) seriously and try c to cultivate it through our individual strivings to including our conduct in the public sphere. r Thus, democratic theory and moral theory have to be relinked. As Warren argues:

... I assume that a description of the self in terms of interests can be redescribed in moral terms, in this way linking democratic and moral theory. This is because self-identity includes ideal representations of the self to self, anchoring a person's conception of their interests in a moral representation of who they would like to be(1992.17).

# Democracy, Selfand the Ideal Representation of the Scheme of Becoming

Thus, the ideal representation of our scheme of becoming is important here. Important also here is a characteristic of the self, which seeks to and has the courage to be, and has the capacity to distinguish values from appetites and interest. Democratic theory is now in need of a transformative self, and this we find in the work of Mahatma Gandhi, Sri Aurobindo, G C Pande, and Charles Taylor among others. G C Pande argues that "it is only a self which is conscious of its ideal universality that can distinguish value from appetites, pleasures, and selfish interests and can become the moral subject. It is the notion of the ideal self which is the source of the moral law on which social unity and cohesion depend" [Pande 1982:113]. For Gandhi, the self is characterised not only by the political and economic dimension but also by the dharmic and satyagrahic dimension. It is this moral dimension within the self, with its desire for truth, that democracy must put it at the centre of the social system, as it must help develop this dimension. Gandhi's political practice of satyagraha, civil disobedience and attachment to non-violence provides help in expanding the universe of democracy and anchoring it in a truth-seeking moral self, which is courageous to fight evil in a nonviolent manner. For Gandhi, "the highest

where we will

moral law is that we should unremittingly work for the good of mankind..." [quoted in Pantham 1989]. Such practice of the self is neither a reiteration of the existing opposition between self and other nor a submission of the self to the appetite and ego of the other. As Pantham interprets the Gandhian agenda of emancipation: "unlike the cultural relativists who assert and cling to the radical essential separateness or otherness of the to-becolonised Other from the ethnocentricimperialist self, Gandhi bases his emancipatory struggle of satyagraha on a post-liberal/postrelativist conception of the human 'self', namely, self that is hermeneutically implicated with other selves" [Pantham 1989:15].24

In this search for a hermeneutic self Charles Taylor (1989) provides us probably one of the rare modern accounts of the work of the self as an agent of critique and construction. For Taylor, a moral and a spiritual intuition characterises the work of self and when we reflect upon 'the self in moral space' "the sense that human beings are capable of some kind of higher life forms part of the background tor our belief..." [Taylor 1989:25]. Self provides us an identity and to work on self is to know what one is.25 The moral space of the self is a space of orientation, having a "crucial set of qualitative distinctions". which tells us that "some action, or mode of life, or mode of feeling is incomparably higher than the others which are more readily available to us" (1989.19).

Ronald Inglehart's (1990) description of the culture shift in advanced societies around the axis of the emergent postmaterial values and Anthony Giddens' (1991) work on self and society in the late modern age provide us some engaging descriptions to relate these ideas of self to the agenda of a desired democratic politics. Giddens stresses that "the self in high modernity is not a minimalist self..." [Giddens 1991:181]. For Giddens, "the reflexive project of the self generates programmes of actualisation and mastery," which is manifested, among other things, in the choice of a particular lifestyle and participation in new social movements (1991:9). The reflexive project of the self, which consists in the sustaining of coherent, yet continually revived biographical narratives" is not an "extension of the control systems of modernity to the self' but a project of moral choice and transformative seeking, which gets manifested in the actors' participation in transformative movements.26

In this context, Giddens speaks of "the emergence of life politics" (1991:209). Giddens argues that lite politics is a politics of choice—'a politics of lifestyle' rather than 'a politics of life chances' (1991:214). It is a politics of self-actualisation where the power that defines the field is not hierarchical but generative. Life-politics brings to the fore "problems and questions of moral and existential type" because it centers on "how we should live our lives in emancipated social circumstances" (1991:224). In this context, Giddens urges us to take note of the significance of 'new forms of religion and spirituality', which "represent in a most

basic sense the return of the repressed, since they directly address issues of the moral meaning of existence which modern institutions so thoroughly tend to dissolve" (1991:207).

The reflexive mobilisation of the self that is at work in life politics is different from the opposition between the Self and the Other as manifested, for instance, in familiar models of emancipatory politics. While emancipatory politics is usually a politics of negation, life politics "is aimed not at reducing the negativity of otherness, as embodied in the colonial, the subaltern, the prisoner, vis-a-vis the mainstream, but to 'liberate' the mainstream from itself" [Apter 1992:162]. The task here is to simultaneously criticise the Self and the Other, thus going 'beyond emancipation' and realise the dialectic between the dimension of dichotomy and the dimension of ground in the agenda of transformation [Laclau 1992].28

Beyond Emancipation and Challenge of Freedom

The agenda of democracy is an agenda of freedom [see Dahl 1989]. At the same time, the discourse of liberal democracy, especially in its current manifestation of libertarianism, is based upon a narrow view of treedom, and haunted by the problem of dualism. It has not addressed the question of the meaning of freedom as an object of transformative seeking. The work of Isiah Berlin and Amartya Sen has made us aware of the distinction between negative freedom and positive freedom [Sen 1989].29 But even in Amartya Sen's continued quest for freedom, the spiritual dimension of freedom has not received enough attention. The dualism between negative and positive freedom is still a problem even in Amartya Sen, and there is a need to transcend this dualism at some level in order to be able to meaningfully imagine the agenda of democratic transformation. By having a view of freedom as a spiritual process of transformation and the agent of freedom as a transformative self, which begins with self-control of one's lower self and cultivation of one's higher self, can we go beyond good and evil, positive and the negative? For instance, Sri Aurobindo (1950) argues that standa ds of conduct and the practice of freedom must be anchored in a spiritual plane where the goal of freedom is not only to have the freedom to choose but also to transform our needs and desires. A spiritual seeking also helps us discover the 'secret godhead within us', a discovery that helps us create a universal ground within us where the social distinction between individual and the collective, negative and positive freedom get a new frame of reference for criticism and transcendence even if it does not get out-rightly dissolved.31

# DEMOCRACY AND SPIRITUAL TRANSFORMATION OF SELF AND SOCIETY

The spiritual challenge of freedom is one of transcending the opposition between self and other, and creating communities of discourse and practice where both can live as seekers of freedom. In fact this act of creation of communities is itself a spiritual

act. The challenge here thus is as much for religion as for democracy. While in religion the challenge is to realise that the contemporary competitive existence "that divides what is to be a man and a woman, a white or a black, is a form of human suffering' [Bellah et al 1991:210], in terms of actual challenges for the theory and practice of democracy it means looking at it primarily as a mode of paying attention [Bellah et al 1991]. Democracy means paying attention to the needs and care of the self, family. neighbourhood, communities, country, mankind and the mother earth. "Attending means to concern ourselves with the larger meaning of things in the longer run, rather than with short-term pay offs" [Bellah et al 1991]. For Bellah et al, channel-flipping, TV watching, compulsive promiscuity, and alcoholism is a form of distraction while spending time with one's spouse and children, and repairing the broken car of a neighbour is a form of attention." Bellah et al make it clear that we must understand this plea for attention in the normative sense. In their words:

as in the religious examples, we mean to use attention normatively, in the sense of 'mindfulness', as the Buddhists put it, or openness to the leadings of God, as the quakers say. On the face of it, it may seem haid to tell the difference between attention and obsession. But as we shall use the term here, attention implies an openness to experience, a willingness to widen the lens of appreciation that is appropriate, and this obsession is incapable of doing. Obsessive 'attention' in this normative sense is not attention at all but distraction, an unwillingness to be genuinely attentive to surrounding reality [1991 256, emphasis added]

But this attention to the self and surrounding reality is hard to see in a democratic society such as contemporary American society. In the words of Bellah et al. "Americans have pushed the logic of exploitation about as far as it can go" (1991:271). This is manifested in addiction to conspicuous consumption where goods take precedence over man and God as objects of attention, the rise of homelessness and in the decadence of the built environment of the cities."

In this context of dislocation, distraction and despair Bellah et al pleaded for a politics of generativity and a pattern of cultivation. For them, "the major problems that come to light require the virtue of generativity to solve - indeed, a politics of generativity. The most obvious problem is the perilous neglect of our own children in America: levels of infant mortality, child poverty, and inadequate schooling just as at or near the bottom in these respects among industrial nations" (1991:274) A pattern of settlement and culti-vation is interested in creating communities. As Bellah and his colleagues say: "A pattern of settlement and cultivation allows not only the nurturing of ethnic and racial cultures within communities of memory but an open interchange of learning between such communities, a kind of global localism" (1991:275).

This concern for attention is different from a preoccupation with either money or power as the ultimate measure of life. It is also

different from a clinical preoccupation with whether one's own country would continue to remain number one in the new global environment. Here a genuine transnational spirit must be the guide for action, reflection, and intervention. Johan Galtung (1980) had argued long ago that transnational politics is a politics of individual human beings Widening the universe of democracy means making a move towards both sides: towards the supranational collectivities as well as towards one's reflexive self which is not bounded to the dogmas of social roles and statist citizenship, and which has the capacity to criticise familiar institutions and turn them into islands of problematic justice [see Giri 1993a; Habermas 1990a]. Bellah's agenda of democracy as paying attention and a pattern of cultivation falls in line with the argument of this paper that self-transformation is the key issue while coming to terms with the challenge of democratic transition and the complexification of social systems. It is a spiritual awareness that can make professionals treat other citizens as human beings and with dignity and respect. It is a spiritual awareness that provides us 'freedom from lear' in the context of the all-pervasive 'fear of freedom' and help us realise what Aung Sun Kyi says "It is not enough merely to call for freedom, democracy and human rights. There has to be a united determination to persevere in the struggle, to make sacrifices in the name of enduring truths, to resist the corrupting influences of desire, ill-will and fear" [Kyi 1991:153]. It is this awareness which is crucial to build solidarity and 'dedifferentiation [Beck 1992; Habermas 1984] in the infinitely differentiated but tightly integrated regime of the system worlds. It is the discovery of the universal self within oneself and the inner godhead that is essential to build a transnational democracy. Thus, self-transformation is the key challenge in the face of the current democratic transition and evolution of social systems. Bellah and his colleagues best articulate this challenge for us-

We can indeed try genuinely to attend to the world around us and to the meanings we discover as we interact with that world, and hope to realise in our experience that we are part of a universal community, making sense of our lives as deeply connected to each other As we enlarge our attention to include the natural universe and the ultimate ground it expresses and from which it comes, we are sometimes swept with a feeling of thankfulness, of grace, to be able to participate in a world that is both terrifying and exquisitely beautiful. At such moments we feel like celebrating the joy and mystery we participate in The impulse towards larger meaning, thankfulness, and celebration has to have an institutional form, like all the other central organising tendencies in our lives, so that we don't dissipate at in purely private sentiment [Bellah et al 1991]

## **Notes**

[This is the revised version of a paper presented at the national seminar on "Schools for Life and the Challenges of Tomorrow" at Trivandium, organised by Mitianiketan and Danish Folk High School Association in September, 1993] 1 Political scientists Frances Fox Piven and Richard A Cloward (1988) make this observation about the voting pattern in American presidential elections.

2 As Unger argues, on a large-scale market institutions leave a "restricted number of people with a disproportionate influence over the flows of investment decisions" while on a small-scale these undermine freedom by "generating and permitting inequalities of wealth that reduce some people to effective dependence upon others "[Unger 1987, 483].

3 Unger develops his idea of rotating capital fund thus.

The ultimate capital giver is a social capital fund controlled by the decisional centre of the empowered democracy; the party in office and the supporting representative assemblies. The ultimate capital takers are teams of workers, technicians, and entrepreneurs, who make temporary and conditional claims upon divisible portions of this social capital fund. The central capital fund does not lend money out directly to the primary capital users. Instead, it allocates resoures to a variety of semi-independent investment funds. Each investment fund specialises in a sector of the economy and in a type of investment. The central democratic institutions exercise their ultimate control over the forms and rates of economic accumulation and income distributton by establishing these funds or by closing them out, by assigning them new infusions of capital or by taking capital away from them, by charging them interest (whose payment represents the major source of governmental finance), and, most importantly, by setting the outer limits of variation in the terms on which the competing investment funds may allocate capital to the ultimate capital takers. The investment funds may take resources away from one another thus forming in effect a competitive capital market, whose operations are also overseen by the central representative bodies of democracy [Unger 1987:4361

4 David Osborne (1988) has described several experiments in the United States to make government competitive and fulfil its social obligation more efficiently [also see Giri 1993c; Osborne and Gaebler 1992). In this context, what O'Donnell writes deserves our attention

There is no question that in most newly democratised countries the state is too big, and that this leads to numerous negative consequences. But, in this context, the antonym of big is not small but lean, i.e., an effective and less weighty set of public organisations that is capable of creating solid roots for democracy, for progressively solving the main issues of social equity, and for generating conditions for rates of economic growth suitable for sustaining the advances in areas of both democracy and social equity [O'Donnell 1993-1358]

5 In the words of Apter "The old institutionalists used law as an analytical discourse, both as history and system. Democracy, the systemic alternative to arbitrary power, consisted of law, participation, and accountability, so fashioned to produce a moving equilibrium in the political sphere parallel to the moving equilibrium in the economic." (Apter 1991: 467).

brium in the economic" [Apter 1991-467].
6 In his words, "The denial of liberal rights to (mostly but not exclusively) the poor or otherwise deprived sections is analytically distinct from, and bears no necessary relation to various degrees of social and economic democratisation. But, empirically, various forms of discrimination of extensive poverty and their correlate, extreme disparity in the distribution of (notonly economic resources, go hand in hand with low-intensity citizenship. This is the essence of the social-conditions.

necessary for the exercise of citizenship" [O'Donell 1993.1361].

7 For Unger, "the theory of immunity rights rests, in part, on the empirical hypothesis that freedom from violence, coercion, subjugation, and poverty... enters into people's ordinary conception of essential security. These goods are rivalled in importance only by the more intangible sense of being accepted by other people as a person, with a place in the world" [Unger 1987.524]
8 In the words of Lechner: "Latin American

8 In the words of Lechner: "Latin American society becomes a 'two-thirds' society, with the remaining third of the population unemployed and living on what is cast off by the rest" [Lechner 1991:542].

- 9 I owe this point of introducing the concern of human rights into the functioning of communities to a discussion I had with B D Sharma, a tireless champion of the cause of the tribals and the downtrodden of India and the author of The Webs of Poverty, in March 1992 in Delhi.
- 10 Here it is worth remembering the seminal work of Anthur E Mergan, one of the most engaging advocates of community in modern times. It is no wonder that Morgan who pleaded for creation of communities in complex industrial societies also pleaded for understanding the significance of a longer-time horizon.
- 11 But Whitehead himself makes clear that "public morality is by no means reducible to religion" [Whitehead 1993a:1248]
- 12 Offe and Preuss tell us what they mean by reflective preferences: "By reflective preferences we mean preferences that are the outcome of a conscious confrontation of one's own point of view with an opposing point of view, or of the multiplicity of viewpoints that the citizen, upon reflection, is likely to discover within his or her own self" [Offe and Preuss 1991:170].
- 13 For instance, Whitehead believes that if institutions are "soundly based, with high professionalism and good standing in the society, ie, 'transparent' and 'accountable', then they may serve to absorb and even reconcile clashes' 'between economic and political liberalisation'." In the words of Whitehead: "Two of the most vital areas for liberal institution-building are the legal system and the apparatus of economic management. Both of these are often severely affected both by economic disorder and by authoritarian abuse. If the process of economic and political liberalisation is to become routinised these institutions will have to be reformed and roorganised to provide the necessary continuity and support" [Whitehead 1993b:1386].
- 14 Unger also makes a similar argument when he writes, "Empowered democracy attempts instead to change the relation between large-scale, inclusive institutions and non-institutionalised collective action, to make the former into a more congenial home for the latter. The closer the movement comes to its moment of power and therefore also to its hour of institutional definitions the less room there is for discrepancy between means and ends" [Unger 1987-173-74]
- 15 Here I draw upon the arguments of Habermas. While discussing the problem of poverty within a country and inequalities between the North and South, Habermas argues, "a dynamic self-correction cannot be set in motion without introducing morals into the debate, without universalising interests from a normative point of view" [Habermas 1990b 20]
- 16 A contemporary critic helps us understand this and go beyond the euphoria and illusion in the wall streets: "In the contemporary world, the joyful celebration of the advent of democracy must be complemented with the

sober recognition of the immense (and, indeed, historically unusual) difficulties its institutionalisation and its rooting in society must face... In addition, there are no immanent historical forces which will guide the new democracies toward an institutionalised and representative form, and to the elimination of their brown areas and the manifold social ills that underlie them. In the long run, the new democracies may split between those that follow this felicitous course and those that regress to all-out authoritarianism. But delegative democracies weak horizontal accountability, schizophrenic states, brown areas and low-intensity citizenship are part of the foreseeable future of new democracies' O'Donnell 1993:1367].

17 Here what Mark Warren argues deserves our attention

Public material goods present unique opportunities for self-transformation when compared with other goods. Although they are inherently conflictual and do not depend on commonality for their value, they can only be gained through common action. Combined with expanded democracy, this characteristic presents individuals with opportunities to change the way they make trade-offs between individual and public material goods, as well as to discover other, non conflictual goods associated with the common deliberation and action that public goods require [Warren 1992:21, emphasis added].

- 18 However, such an agenda of moral criticism and self-transformation has been peripheral to the discourse of modern democracy since it was preoccupied with supplanting the medieval hero-worship and collectivism with people's verdict and individualism without thinking deeper about the nature of the person who is supposed to be at the centre of the drama of democracy, not simply as a viewer but primarily as an actor [see Ado 1984]. But Warren argues that "transformations of the self are important for expansive democrats because they view democracy as justified not so much because it allows maximisation of political wants or preferences as because it maximises opportunities for self-governance and self-development" (1984:11).
- 19 Here I have in mind Rabindranath Tagore's line, Jagate Anandajagye Amar nimantrana meaning "I am invited to the world of the sacrifice of Ananda (pleasure)"
- 20 David Harvey (1989) cautions us against aestheticisation of politics.
- 21 I owe this argument to Mark Warren (1993).

22 As Warren argues:

- Fortunately, the self-transformation thesis requires only a very weak theory of needs, one that focuses on the general functional requirements of the self [what Amartya Sen calls 'functioning' and 'capability'] in relation to classes of goods that would satisfy them. This is because democratic theory is not a theory of welfare (although there are essential welfare requirements) but a theory of choice, public decision making, and self-governance. A stronger account of needs is unnecessary and undesirable, since the point of expansive theories of democracy is to recommend institutional arrangements under which individuals develop control over their own need articulation. [Warren 1992-16; emphasis added].
- 23 The same problem of underdeveloped accounts of the self haunts even anthropology and cultural studies even when they self-consciously want to be self-critical and transform themselves into critiques of culture. For instance, in anthropology the champions of self have not been able to go beyond the liberal-bourgeoisie model of individualism

24 In the words of Pantham:

The satyagrahis regard their initial truthclaims as well as those of their opponents or oppressors to be relativistic. They then go through a rigorous discipline of hermeneutically testing the truths of the rival claims. The discipline of satyagraha includes hermeneutical and dialogic interpretations of the competing truth-claims and a set of actions based on the refusal to do harm even to one's opponents. These actions include self-purification and selfsuffering, the vow of ahimsa, showing love and charity or doing good to the opponents, etc. In this way, for the satyagrahi, truth-seeking is not a mere attempt to secure a mirror copy of some out-there object. The attempt is rather to transgress the relativity of their initial truths as well as that of their opponents and thereby to move on to a post-relativist plane of truth. In this transgressive move from relativism, there is no submersion of the individuality of the satyagrahı. It is also not a passive or quietest stance. It is rather a hermeneutical move [Panthom 1989:14]

Rolph Templin, writing about democracy and non-violence nearly 30 years ago, also acknowledges the signal contribution Gandhi has made to modern man's search for truth and says:

In the West, to experiment with truth is now practically unheard of or, at any rate, not regarded as scientific. It is this lack in western science that has given the phenomenon of Gandhi's life, movement, experiments and death their special significance against the western background. Future historians may regard Gandhi as the most consistent pursuer of his age of the truth which makes men free, and the most valiant experimenter with truth in the greatest of all laboratories, the human community [Templin 1965-192].

- 25 In the words of Taylor "To know who you are is to be oriented in moral space, a space in which questions arise about what is good or bad, what is worth doing and what is not, what has meaning and importance for you and what is trivial and secondary" [Tayloi 1989-28]
- 26 In the words of Giddens "It becomes more and more apparent that lifestyle choices, within the settings of local-global interrelationships, raise moral issues which cannot simply be pushed into one side. Such issues call for forms of political engagement which the new social movements both presage and serve to help" [Giddens 1991-9].
   27 In the words of Giddens. "Ite politics is the
- 27 In the words of Giddens, "life politics is the politics of a reflexively mobilised o der the system of late modernity which, on an individual and collective level, has altered the existential parameters of social activity. It is a politics of self-actualisation in a reflexively ordered environment, where reflexivity links self and body to systems of global scope. In this arena of activity, power is generative rather than hierarchical." [Giddens 1991-91]
- 28 As emancipatory politics has shown us the significance of the particular and negation, now life politics must enable us to have a ground where we are concerned with "the destiny of the universal" [Laclau 1992:132]. Laclau helps us make sense of the challenge of the ground against the backdrop of modernity.

If, on the one hand, modernity started by strictly typing representability to knowledge, the constitutive opaqueness resulting from the dialectic of emancipation involves no only that society is no longer transparent to knowledge, but also – since God is no longer there to substitute knowledge by

revelation - that all representation will be necessarily partial and will take place against the background of an essential unrepresentability. On the other hand, this constitutive opaqueness withdraws the ground which made it possible to go beyond the dialectic of incarnation, given that there is no longer a transparent society in which the universal can show itself in a direct unmeditated way. But again, as God is no longer there, ensuring through his word the knowledge of a universal destiny which escapes human reason, opaqueness cannot lead to a restoration of the dialectic of incarnation either. The death of the ground seems to lead to the death of the universal and to the dissolution of social struggles into mere particularism (ibid: 131-132).

It is probably for this reason that Laclau concludes his engaging account of beyond emancipation with the following plea:

We are today coming to terms with our own finitude and with the political possibility that it opens. This is the point from which the potentially liberatory discourses of our post-modern age have to start. We can perhaps say that we are at the end of emancipation and at the beginning of freedom (ibid:137; emphasis added).

29 For Sen, enhancing the 'functioning and cupability' of individuals is an engagement in positive freedom, while preoccupation with one's individual rights and security alone s an instance of negative freedom [Sen 1989].

- 30 It has to be noted that no less a person than Joseph Schumpeter speaks of the significance of democratic self-control. It is important to read Schumpeter when he writes: "It is easier for a class whose interests are best served by being left alone to practice democratic self-restraint than it is for classes that naturally try to live on the state" [quoted in Whitehead 1993a: 1253].
- 31 Again the following long extract from Sri Aurobindo may clarify what I have in mind when I speak of the spiritual dimension of treedom:

all conduct and action are part of the movement of a power, a force infinite and divine in its origin... This power is leading towards the Light, but still through the ignorance. It leads man first through his needs and desires; it guides him next through enlarged needs and desires modified and enlightened by a mental and moral ideal. It is preparing to lead him to a spiritual realisation that overrides these things and yet fulfils and reconciles them in all that is divinely true in their spirit and purpose. It transforms the needs and desires into a divine will and Ananda. It transforms the mental and moral aspiration into the powers of truth and Perfection that are beyond them. It substitutes for the divided training of the individual nature, for the passion and strife of the separate ego, the calm, profound, harmonious and happy law of the universalised person within us, the central being, the spirit that is a portion of the supreme Spirit ... This is the high realisation in front of all our seeking and striving, and it gives the sure promise of a perfect reconciliation and transformation of all the elements of our Nature. A pure, total and flawless action is possible only when that is effected and we have reached the height of this secret Godhead within us [Sri

Aurobindo 1950:193-94; emphasis added).
32 As Bellah et al argue: "For we have not experienced the potentialities of ourselves and our relationships, and so we have not reaffirmed ourselves in the larger contexts that give our lives meaning. If, after a stressful day, we can turn our attention to something that is mildly demanding but inherently meaningful - reading a book, repairing a car, talking to someone we love, or even cooking the family meal - we are apt to find that we are 'released' [Bellah et al 1991:255].

33 In the words of Beltah and his colleagues: The record of city growth [in the US] over the last half-century graphically demonstrates that without sustaining institutions that make interdependence morally significant, individual attention becomes fragmented in focus and limited in scope. Vast social inequality is rendered invisible by residential separation, and an often shocking indifference to human misery and environmental

degradation goes generally unremarked" [Bellah et al 1991:268].
As Bellah et al argue: "The whole argument about whether the United States is in decline or is as strong as ever is also besides the point and fundamentally distracting. Clearly we are headed toward a future in which a number of highly successful national or regional economies will coexist: rather than worrying about where the United States is in the hierarchy, we should be worrying about creating a humane economy that is adequate to our real purposes, and a healthy international economy that operates for the good of all people" (1991,272).

# SCHEDULE 17

# PRINCIPAL ACCOUNTING POLICIES

# l General

The accompanying financial statements are prepared on the historical cost basis and in accordance with the generally accepted accounting principles and conform to the statutory provisions and practices prevailing within the banking industry in India

# 2. Fransactions involving Foreign Exchange

- a) Foreign currency assets and liabilities are translated on the Balance Sheet date at the rates notified by Foreign Exchange Dealer's Association of India (FEDAI). The resulting profits or losses on revaluation are accounted for in the Profit and Loss account.
- b) Contingent liabilities on account of outstanding foreign exchange contracts are reported at the contracted rates. These contracts have been revalued on the Balance Sheet date at the rates notified by FEDAI and the resulting profits or losses are accounted for in the Profit and Loss account as clarified by RBI Circular No BP BC.68/21.04.018/96 dated June 5, 1996, whereas, as per A S 11 (Revised) issued by the Institute of Chartered Accountants of India, the difference between the exchange rate at the date of the transaction and the forward exchange rate is to be recognised as profit/loss over the period of the contract.

# 3. Advances

The guidelines issued by Reserve Bank of India in respect of provisioning have been applied to the loans and advances outstanding on the Balance Sheet date and all advances were required to and have been treated as Standard Assets

## 4 Fixed Assets

- a) Fixed Assets are accounted for on a historical cost basis.
- b) Depreciation has been provided for on the straight line method, pro-rata from the date of addition, at rates prescribed under Schedule XIV to the Companies Act, 1956.

## 5. Deferred Revenue

The following have been treated as Deferred Revenue expenditure and are written off over a 12 month period-

- a) Preiminary expenditure
- b) Fees paid for business and technology consultancy for setting up of the Bank
- c) Software License fee for use of software on a non-exclusive, non-transferable basis

# 6 Gratuity

Provision for gratuity has been made based on actuarial valuation

Registered Office: Chaturvedi Mansion, 2nd Floor, 15, Old Palasia, Agra-Bombay Road, Indore - 452 001

#### SCHEDULE 17 - (Contd.)

# NOTES FORMING PART OF ACCOUNTS

- 1. All investments as at the Balance Sheet date have been treated as "Current Investment" and are valued at cost or market value whichever is lower in compliance with the Reserve Bank of India requirements.
- 2. The Bank does not anticipate any Income tax liability for the year ended 31st March, 1996 and therefore no provision has been made for the same.
- 3. Wealth tax is accounted for, on payment basis.
- 4. Guarantee fee is accounted as income on pro-rata basis over the period of guarantee.
- 5. The Capital Adequacy ratio of the Bank as at 31st March, 1996, as computed under the guidelines issued by Reserve Bank of India was 182%.
- 6. In the accounts for the period ended 31st March, 1995, one-tenth of the Pre-incorporation expenses, Pre-operative expenses and fees for business and technology consultancy for setting up of the Bank, was written off. During the year, the Bank has decided to write off this expenditure over a period of 12 months from the date of incurring the expenditure. As a result of this change, the amount written off in this respect during the year is higher by Rs. 25,840 thousand.
- 7. a) The Bank has during the year commenced the business of banking pursuant to receipt of license from Reserve Bank of India.
  b) Previous year figures are for the period 15th Sept. 1994 to 31st March, 1995.
  - In view of the above, figures of the previous period are not comparable with that of the current year.

8 Previous year's figures have been regrouped wherever necessary.

# **AUDITOR'S REPORT**

AUDITOR'S REPORT ON THE ACCOUNTS OF IDBI BANK LIMITED UNDER SECTION 30 OF THE BANKING REGULATION ACT, 1949.

We have audited the attached Balance Sheet as at 31st March, 1996 of IDBI Bank Limited and also the annexed Profit and Loss Account of the Bank for the year ended on that date.

The Balance Sheet and the Profit and Loss Account have been drawn up in accordance with the provisions of Section 29 of the Banking Regulation Act, 1949 read with provisions of Section 211 of the Companies Act, 1956.

## We report that:

- (a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and found them to be satisfactory.
- (b) The transactions which have come to our notice, have been, in our opinion, within the powers of the Bank
- (c) In our opinion, proper books of accounts as required by law have been kept by the Bank so far as appears from our examination of those books.
- (d) The Balance Sheet and Profit and Loss Account of the Bank dealt with by this report, are in agreement with the books of accounts.

In our opinion and to the best of our information and according to the explanations given to us, the said accounts read together with the notes thereon and the Principal Accounting Policies, give the information required by the Companies Act, 1956 in the manner so required for banking companies and on such basis, the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st March, 1996, and the Profit and Loss Account shows a true and fair view of the profit of the Bank for the year ended on that date.

# Global Market and Competitiveness of Indian Agriculture

# **Some Issues**

Sucha Singh Gill Jaswinder Singh Brar

India's signing of the GATT agreements in 1994 and her joining the World Trade Organisation as a founder member have put Indian agriculture into the framework of global competition and rule of the global market. However, discussion of the issue of the competitiveness of Indian agriculture has been carried on in a narrow context, ignoring major questions such as global commodity prospects in terms of prices and their stability/instability and the movement of domestic and world market prices and of agricultural and non-agricultural prices within the country. The overriding issue of the structure of the global market has been hardly brought into the discourse.

In this paper an attempt is made to examine competitiveness of some selected agricultural crops in the light of empirical evidence of domestic and international prices, the world commodity situation and the structure of the global market for agricultural commodities.

LAUNCHING of structural adjustment programme in July 1991 for macro-economic stabilisation has opened up Indian economy to outside competition and accelerated its integration with the global economy. This has serious implications for the agriculture of the country in the sense that the supportive system to agriculture has been put to resource crunch. Moreover, the feasibility and relevance of the support measures have been put under question mark both by a section of the farmers and the policy-makers. India's signing of GATT agreements in 1994 and her joining of World Trade Organisation (WTO) as a founder member has put Indian agriculture into framework of global competition and the rule of global market. These developments have brought the question of competitiveness of Indian agriculture to the centre stage of the controversy. In view of the majority of Indian population being dependent on agriculture, this question has attracted the attention of a large number of commentators, government-controlled media researchers. The discussion on this issue has been in an extremely narrow context ignoring major issues such as global commodity prospects both in terms of commodity prices, their stability/instability, movement of domestic and world market prices, movement of agricultural prices and non-agricultural prices within the country. The overriding question of structure of global trading market is hardly brought in this discourse. In this paper an attempt is made to examine competitiveness of some selected agricultural crops in the light of empirical evidence of domestic and international prices, the world commodity situation and structure of global trading market of agricultural commodities. For illustrative purposes the analysis is based on agriculture of Punjab. The selection of

Punjab is guided by two related factors. First, Punjab is agriculturally most advanced region in the country in terms of technology of production and per hectare yield of foodgrains, particularly wheat and rice. Secondly, Puniab produces a large amount of surplus production in both the crops. In other words, the state has a large export surplus and in eventuality of India emerging as exporter of these crops, Punjab will be the major contributor in this process. The analysis based on Punjab reality has a bearing for other regions placed in the similar situation. This paper is divided into four sections. Section I deals with the issue of globalisation of agriculture and its likely context for developing countries like India and their trade of agricultural commodities. Section II deals with international competitiveness of agriculture of Puniab particularly those of wheat and rice. Section III examines the structure of global market for primary commodities and problems of retaining gains of development for the primary producing developing countries. Concluding observations are made in the last section.

1

The discussion here is based on the assumption that GATT agreements 1994 will be honestly implemented and advanced countries do not bring in fresh non-tariff barriers against the poor countries under the pretext of social clauses such as observance of human rights, environment protection and protection of child and female labour. Given this, the GATT commitments will increase access of agricultural commodities in the world trade due to (i) replacement of all types of non-tariff barriers with tariff barriers by the member countries, and (ii)

reduction of tariff rates under a time bour programme. The developed countries w reduce by 36 per cent (of 1986-88 averaglevel) of their tariff rates during six yea while developing countries by 24 per ce during the next 10 years. The least developing countries are not required to undertake as such reduction. Safeguards against sudding abnormal increase in imports, dumpin deficits in balance of payments are threatening of food security have been ke in these agreements.

Besides, a maximum limit of aggrega measure of support (AMS) to agriculture h been fixed at 10 per cent of the value agricultural produce, both product specif and non-product specific for developing countries, and 5 per cent in case of develope countries. In case AMS exceeds those limit then developed countries shall reduce it I 20 per cent and developing countries by 13 per cent during the implementation perio The least developed countries are exempted from such reduction. While calculating AM exemptions have been given for expenditu on research and extension in agricultur investment for building up of infrastructu such as electricity, reticulation of roads at

other means of transport, market and port facilities, water supply, dams and drainage schemes and infrastructural works associated with environment programmes, public stockholding for food security purposes, domestic food aid to targeted sections of population, decoupled income support to targeted (weaker) farmers, income insurance and income safety net programmes, payment to farmers for relief from natural disasters, structural adjustment assistance provided through producer retirement, resource retirement and investment aid, payments under environment programmes and payments under regional assistance programmes. GATT agreements on agriculture provide for minimum access to market to the outside suppliers. This has been fixed at minimum of 3 per cent of domestic consumption or the existing level of import in the reference period (1986-88) in beginning of implementation period which has to be increased to 5 per cent at the end of the implementation period. The GATT agreements provide for reduction in subsidy on exports to the extent of 36 per cent by developed countries and 24 per cent by developing country of 1986-90 base period levels at the conclusion implemenation period, ic, 2005 [World Trade Centre 1994].

In anticipation of conversion of non-tariff barriers into tariff barriers, differential reduction in the levels of customs duties, export subsidies and AMS, a hope has been built that increased market access of agricultural products will benefit the developing countries like India. It is expected that prices of these products will rise more in the markets of advanced countries such as the US, European Union and Japan where agriculture is highly subsidised (Table 1) and protected (Table 2). This will make supply of agricultural products from the developing countries more competitive and these exports from the developing countries will perform better. On this basis, agencies like the World Bank view that agricultural trade liberalisation will benefit the developing countries through changes (improvements) in terms of trade, increased trade efficiency and welfare effects of induced changes in tariff revenues. The level of gains to a country are linked to the extent of participation in liberalisation. In support of this opinion, studies of Krisoff et al (1990), Anderson and Tyres (1993) and Brandao and Martin (1993) are cited. In Indian situation this view is upheld by Gulati and Sharma (1994), Gulati et al (1994), PAU Core Group (1994), Singh and Dhaliwal (1995). The World Bank view has a caveat for food importing countries which are expected to suffer on account of expected rise in foodgrains in the post-GATTera. This caveat is missing in Indian studies. UNCTAD is for a more cautious approach on this issue. It is evident from the information compiled from various studies on the expected rise in frices of agricultural commodities.

Various studies which worked out simulated effects of Uruguay round of trade liberalisation on world prices of agricultural commodities do not give very encouraging situation in the post-GATT period from the point of view of the developing countries (Table 3). Maximum rise in prices is expected for temperate zone crops such as rice, meat, sugar and dairy products but tropical products are expected to experience a minimum rise.

Wheat is expected to gain in its prices between 5 per cent and 7.5 per cent, rice between -1.9 per cent and 18.3 per cent, meat between 0.5 per cent and 13 per cent, sugar between 5.0 per cent and 10.6 per cent and dairy products between 7.2 per cent and 6.9 per cent. Thus, the expected change is not uniform and generally is moderate to low level. It is in this context that countrywise concrete studies are needed to find out the position of each one of them in the emerging new trading system. It calls for working out the export competitiveness of those crops in

which a country/region is expected to have export surplus.

# II

Whether a country in intenational market is able to perform well or not depends on its export competitiveness. Assuming the quality of the domestic and foreign product as the same, export competitiveness is a situation when the difference between the domestic supply price and the foreign (market) price is enough to cover a large number of charges. In other words, a unit of a commodity fetches a price which is considerably higher than for what it is sold in the domestic market. A competitive exporting country after covering the supply price and other charges is in the position to supply a unit of the same quality of product at the lower price compared to the rival exports or the producers of the importing country. In order to examine the question of export competitiveness of Indian agriculture following charges need to be considered along with the procurement price/ market price (in case of non-existence of procurement price): (a) market handling, grading, packing and other charges such as market fee and taxes; (b) local transport and storage charges; (c) inland transport charges from the sale market to international port, (d) storage charges for the product awaiting shipment; (e) transhipment charges; (f) oversea transport and insurance costs; (g) unloading charges from the ship; (h) customs duty charged by the importing country; (i) trader's margin; and (j) local charges and taxes. The list of these charges is indicative of the fact that the exported commodities not

only crosses a long distance but also passes through several processes before it reaches to the final user. This involves a lot of cost. The larger the bulk/weight of a commodity in relation to its value the greater is the share of these costs in the sale price of a commodity in the international market. Since agricultural commodities fall in this category the components of these costs need to be examined carefully before arriving at any conclusion on their export competitiveness. In the recent discussion on this issue in India this aspect

has been dealt with very casually by the researchers. To examine this we have chosen two main crops, i e, wheat and rice, to explore the possibility of their export from Punjab. The result pertaining to Punjab are broadly applicable to Haryana as there is not much difference in the inland transport charges to Bombay.

Estimates of market charges, local transport, storage, and packaging costs, railway freight and interest charges along with procurement price of wheat are shown

Notes: \* This includes market fee of 2 per cent + purchase tax of 4 per cent + rural development fund from 1987-88 at 1 per cent and from 1993-94 at 2 per cent + commission agent's charges at 1.5 per cent up to 1989-90 and 2 per cent from 1990-91

Sources: ESO, Statistical Abstract of Punjab (various issues), Chandigarh.

FCI, Chandigarh Regional Office. Punjah Mandi Board, Chandigarh.

<sup>\*\*</sup> Estimated value.

<sup>\*\*\*</sup> At the rate of 14 per cent per annum up to 1989-90 and at 16 per cent since 1990-91

a This includes additional bonus of Rs 5 paid by the government Estimates do not include transshipment cost and trader's margin.

for 1980-81 to 1994-95 to work out price of Punjab wheat at Bombay railway station for onward loading on the ship for export (Table 4).1 This is price of fair average quality of wheat and it does not include transhipment cost and trading margin for the exporter. Price of Punjab wheat at Bombay railway station is compared with the US No 2 hard red winter fob gulf ports. It is assumed that fob price of the US wheat will be the same at Bombay port as it is at Gulf ports. This assumption has been made because India has not been the major importer of wheat during these years. By multiplying current US \$ price of wheat with India's average official exchange rate, the prices are converted into rupees. The ratio of Punjab wheat price to the US wheat is estimated in percentage for the period of 1982-94 (Table 5). This has been used as a rough measure of export competitiveness.2 It is a rough measure because it does not include trader's margin and transhipment cost. Estimates show that out of the 13 years of study only for the year 1992 this ratio was lower than 100, being 96.89, and 100.20 in 1989. For the rest of the years this ratio stood between 113.56 and 162.06. This means that Indian price of Punjab wheat at Bombay had been considerably higher than the fob gulf price of the US wheat. In other words, during these years Punjab wheat was not competitive in the export market. If we add 5 per cent more in Punjab wheat price as trader's margin and transhipment cost then it is not

competitive for all these years in the international market. It is also interesting to note that Punjab wheat is not competitive even in the post-1991 period when Indian rupee was devalued in a big way. Ignoring trader's margin and transhipment cost, the average value of the ratio of prices of Punjab wheat to the US wheat was 111.13 for post-liberalisation years (1991-94).

In case of rice, Punjab is producing three distinct varieties. They are superfine rice, common (coarse) rice and basmati rice. While working out figures for competitiveness of

Punjab rice two more processes are added, compared to wheat. First is transportation of paddy to mill point and is dried for milling purpose. The second is processing the paddy to separate rice from the husk which involves milling charges. Recovery of rice is estimated at the rate of 67 per cent in case of superfine variety (also for basmati rice) and 69 per cent for common (coarse) variety. Various types of market charges and expenses along with local transport and storage charges, railway freight and interest charges are estimated for the period 1980-81 to 1994-95

Common with the wheat

Note. Estimates of rice price do not include trader's margin and transhipment charges.

include the bonus paid by the government.

b recovery at the rate of 67 per cent

(Tables 6 and 8). On this basis, price of Punjab rice is worked out at Bombay railway station both for superfine variety and common variety. Without considering transhipment cost and trader's margin ratio of prices superfine rice from Punjab and those of Thailand rice (Bangkok fob) are worked out for 13 years from 1982-94 (Table 7). Out of 13 years for seven years (1983-87, 1993-94) Punjab rice has been costlier than Thailand rice. For two years (1982 and 1990) it has been less costly than Thailand's rice marginally, hardly covering transhipment cost and trader's margin. Only for four years (1988, 1989 and 1991, 1992) it has been less costly than Thailand's rice. the difference in prices being between 7.89 per cent and 23.48 per cent. The last two favourable years (1991 and 1992) have shown these results due to mas-sive depreciation of the rupee as a part of liberalisation policy known as structural adjustment programme. This advantage has been dried due to domestic rise in the price during the last two years and fall in the international price.

The coarse variety of rice has been and continues to be competitive in price terms in all the years since 1988. This is due to low procurement price and high recovery rate (by 2 per cent compared to superfine rice). Being inferior in quality, there may be a problem of selling it in the international market. Moreover, if one looks at the trend of price competitiveness it is declining at a fast rate. It was 30 07 per cent in 1991 came down to 7.17 per cent in 1994 (Table 9).

Basmati rice from Punjab has expanded considerably during the last few years. Due to its qualities of aroma, flavour and softness. its market is expanding. As vet in India. there is no policy of price support to this variety. Secondly, the average level of yield of this crop is very low compared to other varieties. Lastly, this crop is largely area specific. It is grown mainly in the submountainous districts of Punjab, Haryana and adjoining districts of UP.4 As yet, data pertaining to economies of cultivation of this crop and its competitiveness are not available. Available evidence suggests two things. One, the farmers producing this crop face uncertainty of prices. They vary widely from season to season. Secondly, India's main rival in the export market is Pakistan. The quality aspect in export market is important factor and Indian rice exports has been complained to contain higher levels of inorganic bromide residues [Bhasin 1994].

India, in general, is not major of exporter rice. It has started producing a large export surplus during the last few years and is expected to do so up to 2005 [World Bank 1993]. Her entry into the global trading will seriously reduce its prices. At present, her export surplus is larger than the total world exports of rice.

On export competitiveness our estimates differ from Gulati et al (1990, 1994) and

<sup>\*</sup> They are at the same rate as for wheat

Note: Estimates of price do not include trader's margin and transhipment cost.

a include extra bonus paid to the farmers by the government.

b at the rate of 2 per cent on procurement price+mandi charges+local transport and mandi labour

c recovery rate of rice from paddy is calculated at 69 per cent.

d at the rate of 14 per cent per annum up to 1989-90 and 15-16 per cent since 1990-91

'AU Core Group (1994). The major cause of differences arise out of estimates of narketing costs and distribution margins. Julati et al have estimated them at the rate of 6 per cent and 5 per cent of the procurement price, respectively, for wheat and rice of Juniab. These are grossly underestimates of he actual market costs and distribution nargins. The actual figures are much higher ind these costs have been rising over period of time. But Gulati et al have used them at given constant rates. Compulsory market tharges consisting of purchase tax, market committee fee, rural development fund and ommission agents charges put together were 7.5 per cent between 1980-81 and 1986-87, 3.5 per cent during 1987-88 and 1988-89, ) per cent during 1989-90 to 1992-93 and :0 per cent since 1993-94. The other market landling charges other than railway freight nave varied between 13.09 per cent and 20.52 per cent of procurement price during 1980-81 and 1994-95. The market expenses have been higher in case of rice due to nilling process which involve additional ransport charges to mill point, cost of drying baddy and milling charges. If compulsory narket charges and other market handling osts are clubbed together they turn out to be between 20.59 per cent and 29.52 per cent of procurement price of wheat and even ugher than this in case of rice. Further, if railway freight for export via Bombay is idded then these charges for wheat excluding ranship cost and traders' margin have ranged between 33.11 per cent and 54.98 per cent during 1980-81 and 1994-95 (Table 10). In case of rice these charges will be higher than those of wheat. These are much higher than nearly 10 per cent estimated by PAU Core Group. It is painful to point out that Gulati et al and PAU Core Group appear to have deliberately chosen to make underestimate of market handling and distribution margin to give results suited to the government propaganda that opening up of Indian agriculture to outside global competition will be beneficial to Indian agriculture

Our estimates point out that if Punjab agriculture which is most advanced in the country with high per acre yield (much higher than other regions) is not internationally competitive then it will be much more difficult for other regions to successfully compete with the agriculture of the advanced countries in the world.

The advantage of high per hectare yield inboth wheat and rice of Punjab is neutralised by high costs associated with marketing and distribution of these crops. Agricultural products are bulky and involve a high transport cost from Punjab to ports from where it can be exported. Due to fast increase in railway freight charges, its share as percentage of procurement price has been increasing over the years and stands around

20 per cent in 1994-95. The market handling cost has also been generally rising and has remained between 13.09 per cent and 20.52 per cent of the procurement price. The compulsory market charges have increased from 7.50 per cent between 1980-81 to 1986-87 to 10 per cent of the procurement cost (Table 10). Given Punjab's long distance from ports, it is difficult to economise on railway freight charges. In the same way, reduction in compulsory market charges involve the finances of the state government and any reduction below 1986-87 and 1988-89 average on exported items will invite WTO provisions and will be treated as export subsidy. Any general reduction in these charges will put serious strain on the already shattered financial position of the state. The third component of these charges is the handling cost. In this gunny bag is the major factor. These bags are supplied by the jute industry which is again beyond the scope of the state policy. Similarly, in transport, storage and interest charges, which involves private transporters, commercial banks and warehousing corporations, there is little scope.

Therefore, the only policy option remains with the state is to increase further productivity of agricultural crops. For this two distinct steps need to be taken, first, this will require massive investment in the agriculture both by the cultivators as well as by the state to strengthen infrasructure, irrigation system, regular, and cheap supply of electricity,

Notes 1 This ...cludes (a) purchase tax.
(b) market fee, (c) rural development fund, and (d) commission agent's charges

- 2 This initides (a) mandi labour, (b) local transport and handling charges, (c) local storage charges, (d) cost of gunny bags, and (e) interest charges for three months.
- 3 Railway freight from Patiala to Bombay

provisions for efficient marketing system, etc. Secondly, there is need to strengthen agricultural research to achieve further major breakthrough in inventing new varieties of seed which lead to at least 30-40 per cent increase in per hectare yield. Since private institutions in agriculture research are nonexistent, the state will have to shoulder this responsibility and give special attention in the area of agricultural research. Since the present system of research of public institutions such as agricultural universities is under considerable financial constraint and management crisis, innovative initiative need to be taken to tackle the problems of raising agricultural productivity on a priority basis. Under GATT agreements 1994 and WTO provisions such initiatives do not invite any hostile response as they come in the category of exempted items

Note: \* The instability index is given by  $\frac{100}{(n-2)} \left\{ \sum \left[ (x_i \cdot x_i^*)/x_i^* \right]^2 \right\}^{1/2}$ 

where n is the number of observations and x\* is the trend forecasted value of x Source: World Bank, Price Prospects for Major Primary Commodities, Vol. II, Washington, DC, 1993, p. 120.

Even if agricultural commodities show competitiveness in the international market the following three issues need a scrious consideration. They are: (1) volatility of prices in the international market, (2) trend of prices and (3) international trade market structure. These factors considerably influence the realisation of gains to exporting countries of agricultural commodities. Proper knowledge of these factors and intelligent response of a country lead to enhancement of its gain from the trade. On the other hand, lack of knowledge or improper response may lead to loss of exploitation of international market situation.

Agricultural commodities, unlike manufacturers, are subject to vagaries of nature. A crop failure due to draught or floods in a major supplier country lead to global shortage of a commodity and consequently, rise in its price. A bumper crop, on the other hand, can depress the prices in the global market. The problems connected with storage and buffer stocks has been one of the factors in the destabilisation of prices and earnings from the primary commodities for the producers from the developing countries. Volatility of prices of primary commodities has been one of the issues continuously debated at various UNCTAD, and creation of a large fund for building buffer stocks has been suggested but non-implemented solution. Being exporters of primary commodities, the developing countries have substantially higher export earnings instability than the developed countries. It is argued that fluctuations in export earnings of developing countries generate domestic instability, complicate the task of development planning and reduce the efficiency within which investment resources are used [Macbean 1966; Schiavo-Campo and Erb 1969; Massell 1970, Glezakos 1973; Savvidos 1984; Lanceiri 1987; Love 1992]. Wheat is mode-rately high instability commodity, rice is a high instability crop, and edible oils and sugar are very high (price) instability crops (Table 11). India's opening up of agriculture to the world trade and further increased emphasis on production for exports is likely to bring economic instability within the country with consequent instability in the earnings of the producers and their pattern of investment. High and frequent instability in prices not only negatively influence investment but brings peril to the small producers. In Indian agriculture more than 2/3 of the farmers being small and marginal in size, the question of their future is an important policy issue. They are affected negatively not only as producers of these commodities but as consumers also. Globalisation of trade of agriculture means that the country's agriculture will also be subjected to the global instability. There is a need to be aware of this problem and advance preparations are necessary to avoid harmful consequences.

Prices of primary commodities in the work market have been a subject by a large number of scholars and an issue of debate at a large number of international conferences in the post-second world war period. It has been argued that the prices of primary commodities have been lagging behind those o manufactured goods leading to deterioration of terms of trade of primary commodities exporting developing countries [Kindle berger 1956; Singer 1950, 1982; Lewis 1955 Myrdal 1956; Prebisch 1950, 1964; Nurksi 1959; Kaldor 1963; Emmanual 1972; Diwar and Marwah 1976; Spraos 1980, 1983; Chi and Morrison 1984]. Diakosnnas and Scandizzo (1991) analysed 81 studies or this issue published between 1817 and 1986 After looking into positive, negative and secular trends, ultimately, they agree witl the conclusion that there can be controvers on the extent of deterioration but not of deterioration as such. Recently, the Work Bank (1993) has published actual prices o primary commodities between 1970 and 1991, and estimated projections for short term up to 1995 and long-term for 2000 and 2005 at constant dollar pricess of 199 (Table 12). The constant prices have o various primary commodities have bee worked out by deflating them with MU\ (manufacturers unit value index 1990 = 100) Data clearly bring out that at constant price of primary commodities vis-a-vis those o manufacturers have actually decline between 1970 and 1991, and projected t-

remain low in short term. Though some recovery is expected in the long run, yet these prices will remain substantially lower than their level during 1980s. Even when current dollar prices are considered the situation is not encouraging (Table 13). Leaving the case of a few commodities such as beef, bananas, oranges and coconut oil no other commodity is projected to attain the price level they achieve in 1980 or 1985 in the short term. Even in the long run, i e, 2005, many commodities will not be in the position to achieve the level of their prices of 1980 or 1985 in current dollar terms.

The results of the studies of the past price trends by a host of scholars and bodies and their projections up to 2005 by the World Bank show that the countries which specialise in the export of primary commodities, or those which like India intend to do so in the near future, are bound to lose through the mechanism of the international trade. The evidence has an important policy implication which questions the wisdom of exporting primary commodities and provides a strong support to the strategy of developing manufacturing sector in the primary commodities producing developing countries instead of relying and developing specialisation in the export of primary commodities.

The entire of international trade theory has been built on the assumption of perfect competition in the world market. There is, therefore, a general neglect among the scholars on the issue of structure of trade

market in the world. This is in spite the fact that there has been many scholars writing on the rise and prominence of the MNCs in the world economy.

The structure of the commodity market is an important determinant of distribution of gains between the producers, consumers and traders. Market imperfections affect the distribution of gains among these three categories of people. Since in the case of internationally traded commodities these categories belong to different countries, therefore, the changes in share of distribution of gains among them is converted into gains and losses to different countries. In the past, the developing countries tried to increase their gain through various forms of state interventions such as commodity agreements, state trading, etc. These measures partially helped these countries [Girman 1987]. In the post-Soviet era there has been a general environment against such state interventions in the world trading. Several of commodity agreements reached in the past have been allowed to expire without their fresh renewal. The state intervention in the international trading are now described as undesirable market distortions. The GATT agreements 1994 prohibit these measures except in serious economic emergencies such as balance of payments crisis, threatened food security or threat to internal and external defence security and situation arising out of environmental problems. In an environment of free market thinking in the GATT agreements leading to establishment of WTO, there is not a single word written on developing and enforcing a code of conduct for MNCs or monopoly companies involved in the world trading.

MNCs are traditionally involved in mining and plantation of primary products and also in their exports from the developing countries. Several factors have contributed to their significant role. They are: (1) complexity of processing technology and the direct cost of capital, skilled labour, energy and other inputs used in processing; (2) monopoly and oligopoly in processing; (3) advantages of foreign processing such as economies of scale, availability of infrastructure and need to blend raw materials from different souces; (4) use of trade barriers by the developed countries for discouraging imports of processed products from the developing countries; and (5) strategic decision of MNCs to process commodities at home or in third countries [Girvan 1987].

Besides MNCs, giant trading companies have arrived on the scene. Though they existed earlier yet they have experienced a vast transformation in the post-second world war period. Their number has drastically shrunk, the size of their assets increased and they have diversified their activities into multi-commodity trading. Consequently, there is fast upsurge in concentration of their trading power. The bulk of most of the commodities marketed in the world trade are handled by less than six multi-commodity traders. These traders belong to western Europe, the US and Japan. The scale of their operation is so large that they dominate completely the world trade to the extent of

(

85-90 per cent (Table 14). Out of the 21 commodities, 3-6 big companies control more than 80 per cent of the world trade of 13 commodities. Only in case of hides and skins their share was 25 per cent and in the remaining 7 commodities the share of these companies exceeded 50 per cent of the world trade. The opening up of trade of agriculture will expose the producers from the developing countries to the operations of the giant trading companies. Their size of operation, financial clout and specialised trading techniques put them in strong and strategic position vis-a-vis the large number of small producers from the developing countries. The need of developing countries to enter or retain their market share and earn scarce foreign exchange often forces them to enter into deals with these trading companies. It is pertinent to mention here that entry of Pepsi in India was argued and justified on the ground that this MNC was capable of marketing a large quantity of its processed vagetables and fruits from Punjab due to its links with chain of stores and hotels [Gill and Gill 1990]. These trading companies possess two other advantages in dealing with the developing countries. They are: (1) economic intelligence network and (2) ability to sustain large inventories. Their well organised economic intelligence have

Cavanagh, 'World Commodities Trade:
Changing Role of Giant Trading
Companies', Economic and Political
Weekly, October 15, 1988.

computerised centres that monitor by satellite everything related to commodity output. trade, meteorological conditions, prices and future markets. This is supplemented with information related to political conditions, domestic collaborators and social forces hostile to these companies. This information is used for building bargaining power of these companies. The capacity of these companies to build and sustain a large inventories of the traded commodities help them in planning their marketing strategies. The small and poor producers of the developing countries are compelled to sell their output immediately after harvest which are purchased by these companies to build their inventories to be unloaded when profit conditions are most favourable. With the centralised private command the big trading companies have the advantage of first strike capability which is used to destroy the bargaining power of not only small producers but also collective strength whenever built by the developing countries either through state trading or through international commodity agreements which are undermined by mega traders through inventory manipulations. In presence of such huge/ mega trading companies, private trading companies from developing countries are no match. There is a history of take over by the mega trading companies such as Cargill, of the relatively weaker companies from the advanced countries. They can indulge in collusion with other such companies and influence future market operations [Clairmont and Cavanagh 1988]. The near monopoly or oligopoly position of the mega traders is one of the major distortions in the world commodity markets. This distortion has the tendency to be more serious with the increase of concentration of market power the mega traders. The developing countries have to confront this distortion without the earlier backing of organised ideological strength of G-77 of UNCTAD. The consequence will be that in the future, the prices of primary commodities will be more manipulated and rigged by giant trading companies to the disadvantage of the producers of the developing country. Large investments by these companies in advertisements leading to creation of brand names recognition and loyalty and control over distribution network are big hurdles which cannot be crossed without equally large investments by competitors backed by high quality products at competitive prices. The very high cost involved in the processes between the farm gate and the final consumers, such as processing, packaging, advertising, marketing and distribution, makes the share of primary commodity of the final product as very small. For raw cotton growers price represents 4-8 per cent of the final product, 6 per cent for tobacco; 14 per cent for bananas,

11-24 per cent for jute goods; 12-25 per cent for coffee and for tea 15 per cent of the US retail price of tea bags [Girvan 1987; World Bank 1994]. This means that any country such as India if it decides to specialise in production export of primary products particularly that of agriculture, it opts for the lesser share of the price paid by the final consumers. The major share of this price is taken away by the grant trading and processing companies. This has a important policy implication for the developing countries. In order to retain the larger share of the price paid by the final consumers, these countries need to develop and promote indigenous processing (industrialisation) and collective marketing arrangement which operates in favour of a large number of small producers. Obviously, these countries in the present day global market situation of monopoly or oligopoly cannot dispense with the state intervention on a bigger scale.

#### IV

With India's signing of GATT agreements 1994 and becoming founder member of WTO, globalisation of agricultural production will experience an increase and global market forces will play greater role in determination of cropping pattern, investment level, price structure, quality of production and level of international trade. The measures such as minimum compulsory market acces, to foreign suppliers, removal of non-tariff barriers and their replacement by tariff barriers at a reduced rates, limitation of AMS, introduction of sanitary and phytosanitary measures, removal of restrictions on foreign companies in domestic trade and processing and acceptance of standard Intellectual Property Rights and their application to new seeds and plants varieties, will contribute to the process of globalisation and allow free play to the global trading and agro-processing companies in countries like India.

Globalisation of agriculture will create increased international trading opportunities for those countries/regions which produce a large surplus both in wheat and rice crops The possibility of these regions gaining from such opportunities depend on their expor competitiveness. In other words, if these regions are in the position to supply these commodities in the international market a prices lower than their competitors assuming the quality of the products to be comparable These regions are far off from the seaport and these commodities being bulky in relatio to their unit price, there is a high componer of rail freight along with high marketing an handling costs are subject to a high level c compulsory market charges. The Punia agriculture in spite of being most advance in the country is not internationall competitive in wheat and rice commoditie

due to high costs involved between the farm gate prices and fob export prices. Under the present production technology, marketing and handling system and tax structure accompanied by double digit inflation has eliminated whatever advantages the country could acquire in these two commodities following massive devaluation of rupee in 1991. To be internationally competitive in wheat and rice, the country will have to increase farm productivity, introduce efficiency in market handling and lower the tax rates in marketing of these crops. With growing consumers' quality consciousness in advanced countries and signing of sanitary and phytosanitary agreement our crops have to be of high quality with minimum toxic residues. The improvement in farm productivity and improvement in quality of output requires more investment both in agriculture sector and agricultural research. The latter demands skill greater attention on account of application of uniform patent law

on new seeds and plants varieties. Since private research in this area is non-existent in India, the existing research institutions such as agricultural universities and regional research centres must be strengthened and their functioning upgraded to meet the challenge ahead in evolving new varieties to compete with private multinational seeds companies such as Cargill.

International prices of agriculture are subject to a high level of instability due to fluctuations in the level of production caused by vagaries of the nature. Problems associated with the storage makes it difficult question. The experience of the last decade also confirms this. Moreover, prices of these commodities have shown a declining trend at constant dollar prices vis-a-vis manufactured commodities. A large number of studies support the view that exporters of primary commodities (including agricultural products) experience a secular deterioration in their terms of trade. For

producers of agricultural commodities the declining terms of trade become a mechanism of transfer of income from them to producers of manufactured goods. Moreover, when marketing of agricultural products gets linked up with the agro-processing with involvement of mega traders, the share of income of primary producers becomes small. It is found that trading of agricultural products is concentrated with 3-6 mega (global) trading companies. These companies with a large investment resources, trading network and skill, market intelligence, integration with complex processing and established trade brands rig prices of these commodities to their advantage and leave a little share for the farmers who have neither waiting capacity and nor bargaining power.

The trend of international prices and structure of global trading market brings an important lesson for the developing countries like India. There is a need for effective state intervention in the international trading of

Centre for Education and Communication F 20, Jungpura Extension New Delhi - 110014 agricultural commodities to protect the small and poor farmers from international instability of prices and their rigged downward trend by creating collective bargaining power. Another lesson is drawn from the sharing of price paid by final users between processors, traders and the farmers. Experience shows that when the three categories belong to different countries with farmers belonging to the developing world. the share left for the latter is very small. This questions the wisdom for developing specialisation in the export of non-processed agricultural commodities. In fact, this provides support to the time tested viewpoint that the developing countries must achieve a breakthrough in industrialisation and shift to the export of processed materials. This has a greater relevance for countries like India which suffer from the problem of a large unemployed human power. This will not only retain a large part of the value added within the country but also create opportunities of employment for the unutilised workforce.

# Notes

[Discussions with Baldev Singh and J R Gupta of Punjab University, Patiala, Karam Singh, Balwinder Singh and A J Singh of Punjab Agricultural University (PAU), Ludhiana, was extremely helpful on various points. Their help is gratefully acknowledged without implicating them for errors and omissions.]

- 1 The changes on the actual amounts being collected in the markets are paid by FCI but the time period for storage has been reduced from four months to three months and interest charges to two months assuming that private exporters are more efficient than the FCI.
- 2 The ratio of Indian price + other expenses to fob foreign price is used as a rough measure of competitiveness. If the ratio is equal to 100 then the commodity is neither competitive nor non-competitive. If it is less than 100 it is treated as competitive and non-competitive in case of the ratio being 100.
- 3 Estimates of transhipment costs and trader's margin is lower than per cent worked out by Gulati et al (1989) under the head of port clearance charges.
- 4 This is based on our discussion with experts of PAU, Ludhiana, officers agriculture department of Punjab government and some cultivators of the basmati rice.
- 5 In the recent discussion in India on export competitiveness of agriculture in wake of policy of liberalisation and globalisation, these issues are neglected almost completely.

# Investment, Exports and Growth Orthodoxy Vindicated

## Prema-Chandra Athukorala

IN an important article Prabhat Patnaik and CPChandrasekhar (henceforth P-C) examine the investment-export-growth nexus in developing countries through the estimation of bivariate regression using cross-section data for 25 developing countries [Patnaik and Chandrasekhar 1996]. They claim that their results overwhelmingly support the proposition that the investment ratio plays the key role in determining inter-country differences in both growth and export performance and that the so-called 'efficiency of resource use' which undergirds Fund-Bank advocacy is of no relevance in this regard.

The P-C results, if they are to be believed, have significant implications for economic policy reforms in developing countries. In particular, for India, the results, coupled with a significant reduction in the investment ratio during the post-reform year as reflected in the data published by National Statistical Organisation (NSO), seem to make a strong case against the continuation of the marketoriented policy reforms initiated in 1990. As the authors put it, "no increase in the growth rate can possibly occur unless the investment ratio is raised substantially. In practice, however, the effect of these policies has been precisely the opposite - a significant reduction in the investment ratio." But are the P-C results robust enough to warrant such a strong policy inference?

Dubey (1996) points to a number of pitfalls in the P-C analysis. In particular, he demonstrates that the regression coefficient which links growth to investment ratio (outputcapital ratio) is sensitive to the countries included and time period covered in the analysis. When the sample is augmented by adding 15 more countries to the P-C list and the sample period is changed from 1968-88 to 1972-92, the regression coefficient and the R<sup>2</sup> (overall fit of the equation) drop from 0.32 and 0.72 to 0.18 and 0.245 respectively. In the light of this comparison of regression results, coupled with an observation of wide swings in the output-capital rate across countries and over time periods as revealed in P-C data, Dubey infers that the outputcapital rate is "a very slippery and unrealistic concept for planning and policy" (p 631). Dubey also argues (convincingly, I believe) that "the authors' efforts to develop and test a neo-classical explanation of the causal link from exports to investment are not serious" and that the particular approach adopted by

them<sup>2</sup> to demolish the neo-classical view that "getting prices right is crucial to export performance" is "extremely tenuous and difficult to sustain" (p 632). Notwithstanding these limitations, Dubey admits that for the sample of countries and the period studied, "the insight of the old development economists that investment is the key to growth comes out [from P-C results] with flying colours" (p 630).

The purpose of this note is to demonstrate that even for the sample countries and the period studied the data used by P-C are not inconsistent with the neo-classical 'dogma' which they strive to demolish. We do this by re-estimating more appropriate formulations of output growth and export growth regressions using P-C data. First, we discuss the methodological issues leading to our alternative approach, and then present and interpret the results.

#### METHODOLOGICAL ISSUES

The P-C results come from an econometric procedure which does not allow for explicit testing of the neoclassical view which favours outward-oriented policy on 'efficiency of resource use' grounds. If one wants to demolish a particular theoretical proposition in favour of another, both propositions need to be appropriately incorporated in the model. What the authors do instead is to focus solely on the bivariate relations pertaining to the hypothesis the favour, and therefore by design their analytical procedure is not capable of discriminating between the old ('investment holds they key') view and the neo-classical view. Put simply, 'good fit' of their chosen model is only supporting the old view against the null of no relation between investment and growth/exports, which is not the alternative postulated by the neo-classical economists.

In an attempt to (implicitly) justify their peculiar model choice, the authors observe that as the neo-classical position, which advocates outward oriented policies on efficiency greends, came to occupy the centrestage of development thinking, "the investment ratio dropped out of the picture as a significant phenomenon to concentrate attention upon". We wonder if this peculiar (erroneous) characterisation of the neo-classical view (or Fund-Bank position, as P-C call it) has more to do with setting up a convenient straw man for polemical

purposes than setting the stage for an objective analysis of the investment-export-growth nexus. The economists of neo-classical persuasion do consider investment as a key variable in the growth process. However, they differ from the pioneers of development economics in that they place emphasis on both resource accumulation (investment) and 'efficiency of resource use' as key determinants of growth [Krueger 1980, Edwards 1993]. After all, the concept of 'efficiency is meaningless in the absence of resources'!

A key postulate of the neo-classical view is that the outward-oriented growth strategy generates faster export growth and faster

TABLE: INVESTMENT, EXPORTS AND GROWTH:
REGRESSION RESULTS

```
1968-88

                    R^2 = 0.55; F_{v_A} = 10.50**
```

Note: t-ratios of regression coefficients are reported in brackets with the level of statistical significance (one-tailed test) denoted as: \*=5 per cent; \*\* 1 per cent.

F<sub>VA</sub> is the F statistic for the variable addition test conducted on the related bivariate regression. In all cases the degrees of freedom for the test is 1,22.

Source: The bivariate regressions are reproduced from Patnaik and Chandrasekhar (1996)
Others are author's estimates based on data reported in that article.

export growth, in turn, results in more rapidly growing GDP. Quite apart from its direct contribution to output growth (exports are a part of GDP), export growth promotes economic growth through various dynamic effects - improved resource allocation in line with international comparative advantage, the maintenance of higher capacity utilisation, economies of scale and technical change and relieving the foreign exchange constraint (on the procurement of imported inputs, including technology). Also the 'stick and carrot' of competition in export markets provides incentives for productivity improvement and technological change. Clearly the role of investment is implicit in this neo-classical characterisation of the growth-conducive implications of outward-oriented growth strategy. What the neo-classical economists simply postulate is that for a given investment rate different countries can achieve different growth outcomes depending on the nature of the policy regime.

The proper analytical procedure is, therefore, to incorporate both the conventional investment-oriented view and the neo-classical efficiency considerations in the estimating equation, and then allow data to determine their relevance in determining inter-country differences in growth and export performance. A simple way to do this is to include export growth as an additional explanatory variable in the output growth regression and a variable to capture the nature of policy regime in the export growth equation.<sup>3</sup> Thus, we have,

$$G = \beta_0 + \beta_1 (I/Y) + \beta_2 G_X + \mu$$
 (1)  

$$G_X = \alpha_0 + \alpha_1 (I/Y) + \alpha_2 D_{OR} + \mu$$
 (2)  

$$\beta_1, \beta_2, \alpha_1, \alpha_2 \ge 0$$

where,

G = GDP growth, I/Y = gross investmentoutput ratio,  $G_x = real$  export growth,  $D_{OR} = outward$ -orientation dummy variable, which takes value 1 for countries which pursue outward-oriented policies and zero for other countries, and  $\mu$  the stochastic error term.

Ideally we should use a direct measure of outward-orientation in place of  $D_{OR}$ . Unfortunately such a measure is not readily available for all countries in the sample. In the absence of a direct measure, the common practice is to identify countries with outward-oriented policy regimes through a close study of their policy history and then distinguish them from the other countries in terms of the dummy variable technique. This is the procedure adopted here.

# RESULTS

Equation 1 and 2 are estimated by applying the ordinary least squares (OLS) technique to data gathered from various tables in P-C (1996). A common methodological concern relating to the econometric estimation of the relationship between export growth and GDP growth (or between export growth and I/Y)

is the possible two-way causality between the two variables [Edwards 1993]. This may lead to biased coefficient estimates when estimation is done using OLS. Mindful of this issue, we tested for the endogeneity of  $G_{\chi}$  in both equations using the Wu-Hauseman procedure. There was no evidence of endogeneity, and hence the use of OLS is justified. The estimated equations, together with alternative P-C estimates, are reported in the Table.

To comment on the results for the export equation (equation 2) first, there is strong statistical support for the hypothesis that, quite apart from the level of investment, the nature of policy-orientation does matter in explaining inter-country differences in export performance. The coefficient attached to Don is statistically significant at the 1 per cent\* level in all cases with the expected (positive) sign. The equation for the total sample period (1968-88) suggests that, for a given investment ratio, the export growth rate of outward-oriented countries is, on the average, 3.33 percentage points higher than the average growth for the overall sample. For the two sub-sample periods (1968-78 and 1978-88) this figure is 4.73 and 7.87 respectively. (The lower figure for the former period may reflect adverse world market conditions surrounding the first oil boom.) It is also important to note that the inclusion of  $G_x$  as an additional variable improves the overall fit of the equation (as measured by R2) in all cases, and the augmentations of the regression equation by adding Gx is amply supported by the variable addition F test.

Let us now consider the GDP growth equations. The coefficient attached to the export growth variable (G<sub>x</sub>) is statistically significant at the 5 per cent level or better in estimates for all three time periods. The inclusion of this variable improves the overall fit as measured by R<sup>2</sup> in all cases, compared to the P-C bivariate regressions. As in the case of export growth equation, this augmentation is supported by the F test for variable addition. More importantly, the output-capital rate (that is, the coefficient attached to I/Y) is considerably smaller in magnitude in our estimates, suggesting a significant omitted variable bias in P-C estimates. What the results simply suggest is that for two countries with the same I/Y, the growth rates tend to be significantly different depending on the nature of the policy regime; the country which pursues an outward-oriented policy stance (and hence maintains superior export performance) showing a higher growth rate. This is exactly what the neo-classical 'dogma' postulates.

In sum, our alternative regression estimates provide strong support for the neo-classical (Bank-Fund) view that, in addition to the investment rate, the nature of policy-orientation

is crucial in explaining inter-country differences in growth performance.

#### **Notes**

[The author is indebted to Kunal Sen for careful reading of the draft of this paper.]

- 1 Elsewhere [Athukorala and Sen 1995] we have demonstrated that the decline in investment rate as reflected in NSO data is largely a statistical artefact resulting from some shortcomings in the NSO estimation procedure.
- 2 Bivariate regression analysis of the relationship between export growth and the ratio between the GDP in purchasing power parity (a la Kravis, Heston and Summers) dollar and GDP in 'official' dollar (as a measure of the 'cheapness' of a country's product in world trade).
- 3 Note that P-C estimate two export growth equations, one with investment rate and the other with GDP growth as the explanatory variable We do not consider the latter here as it is not central to the issue at hand,
- 4 See for instance Stopford et al (1991) and the work cited therein.
- The country classification used here is the one developed by the World Bank (1987) and reproduced in Edwards (1993). We combine 'strongly outward-oriented' and 'moderately outward-oriented' in this classification to form our 'outward-oriented' country group. China is included in this group for the total sample period and the 1978-88 sub-period. Countries included in this group for the three time periods age: 1968-78: Brazil, Chile, China, Colombia, Guatemala, Hong Kong, Indonesia, Korea, Malaysia, Thailand, Turkey, Uruguay; 1968-78: Brazil, Colombia. Guatemala, Hong Kong, Indonesia, Korea, Malaysia, Thailand; 1978-88: Brazil, Chile, China, Hong Kong, Korea, Malaysia, Thailand, Turkey, Uruguay.

#### **SCHEDULE 17**

## NOTES FORMING PART OF THE FINANCIAL STATEMENTS OF THE INDIA BRANCHES FOR THE YEAR ENDED 31 MARCH 1996

#### 1. Basis of preparation

- (a) The financial statements made upto 31 March 1996 comprise the accounts of the IndianBranches of The Hongkong and Shanghai Banking Corporation Limited ("the Bank"), which is incorporated and registered in Hong Kong. The Bank's ultimate holding company is HSBC Holdings plc, which is incorporated and registered in England.
- (b) The financial statements are prepared under the historical cost convention as modified by the revaluation of premises, and in accordance with the generally accepted accounting principles and the statutory provisions and practices prevailing within the banking industry in India.

#### 2. Principal Accounting Policies

- (a) Income recognition
  - Interest income is recognised in the profit and loss account as it accrues, except in the case of interest on doubtful debts.
  - Fee income is accounted for in the period when receivable, except where the fee is charged to cover the cost of a continuing service to, or risk borne for, the customer, or is interest in nature. In these cases, the fee is recognised on an appropriate basis over the relevant period.
- (b) Transactions involving foreign exchange
  - (i) Assets and liabilities denominated in foreign currencies are translated into Indian Rupees at the rates of exchange notified by the Foreign Exchange Dealers Association of India ("FEDAI") at the year end, except for those foreign currency non-resident deposits eligible for conversion with the Reserve Bank of India ("RBI"), which are translated at the notional rates applicable to these deposits.
  - (ii) Revenues and expenses are translated at the rates prevailing on the transaction date.
  - (iii) Outstanding foreign exchange contracts are revalued at the forward exchange rate notified by FEDAI at the year end and the resultant gain or loss is included in the Profit and Loss Account.
- (c) Staff retirement benefits
  - Provision for retirement benefits in respect of pension and gratuity funds is made based on actuarial valuations conducted by a qualified actuary.
- (d) Net profit
  - The net profit in the profit and loss account is after providing for depreciation in the value of investments, provision for taxation, provision for doubtful advances and other necessary provisions.
- (e) Securities
  - (i) All securities, which cover both debt and equity securities, are classified as current securities and are valued at the lower of cost and market value in aggregate for each category of investment in compliance with RBI requirements, except for zero coupon negotiable instruments which are stated at carrying cost (i.e. cost adjusted for yield accrual).
  - (ii) Market value is determined in accordance with the RBI circular DBOD No. BP.BC. 43/21.04.048/96 dated 6 April 1996. Quoted securities are valued based on market quotations. Unquoted securities are valued by reference to the yield to maturity as prescribed by the RBI.
- (f) Advances
  - Advances are stated net of provision for doubtful advances and interest in suspense. Specific provision is made for doubtful advances as and when they are so considered, based on a periodic review and in line with the provisioning guidelines issued by the RBI. When there is no longer any realistic prospect of recovery, the outstanding advance is written off.
  - Interest on doubtful advances is credited to a suspense account which is netted in the balance sheet against the relevant balances and not recognised in the profit and loss account until received.
- (g) Fixed assets
  - (i) Fixed assets are stated at historical cost less accumulated depreciation, with the exception of premises which are stated at valuation or cost less accumulated depreciation.
  - (ii) Premises are revalued by professionally qualified valuers with sufficient regularity to ensure that the net carrying amount does not differ materially from the fair value. The surplus arising on revaluation is transferred to the 'Capital Reserve' account.
  - (iii) Depreciation is calculated to write off the assets over their estimated useful lives on a straight line basis as tollows:
    - Freehold land is not depreciated.
    - Premises are depreciated at 2% per annum.
    - Other fixed assets are depreciated at 20% per annum.

Member HSBC Group

#### The Hongkong and Shanghai Banking Corporation Limited (Incorporated in Hong Kong with limited liability)

#### 3. Fixed assets

- (a) The most recent revaluation of the freehold premises was conducted in December 1995 and the Bank revalued its owned freehold premises by Rs. 2,169 million based on independent professional valuations.
- (b) Certain premises acquired under a Scheme of Arrangement are held in the name of Hongkong Bank (Agency) Private Limited, a wholly owned subsidiary, for the benefit of the Bank. Accordingly, these premises have been treated as assets of the Bank in these financial statements.

#### 4. Securities

- (a) Securities include securities of Rs. 23,850,000 which have not been transferred to the Bank's name. The Bank has filed an affidavit with the Custodian under the Special Court Ordinance, 1992 and awaits the Court's ruling. On the basis of legal advice received, management expect that these securities will transfer into the Bank's name thereafter.
- (b) There are certain securities transactions currently in dispute with the Bank involving an aggregate sum (including interest) of Rs. 331.3 million (Previous year Rs. 331.3 million) which are not acknowledged as debts by the Bank. In addition, the consequential taxation implications of the above transactions remain unclear. The Bank has defended its position by filing a counter claim. On the basis of legal advice received, management does not expect any loss to the Bank.

#### 5. Retirement benefits

The Bank has made provision for pension payments to staff who retired on or before 31 December 1980 amounting to Rs. 13.65 million and for the monthly payments relating to the Voluntary Retirement Scheme introduced in 1991 amounting to Rs. 18.10 million and provision for accumulated leave amounting to Rs. 18.10 million based on actuarial valuation. This represents a change from the practice followed in the previous year wherein these costs were accounted for on a cash basis. Had the Bank not changed its policy, the net profit for the year would have been higher by Rs. 49.85 million.

#### 6 Other assets

The Bank holds a valid Banker's Receipt for 110,760 Canstock Units of face value Rs 100/- each which have not been physically delivered by the counterparty pending settlement of an unresolved issue, included under contingent liabilities, in respect of securities transactions with the same counterparty. The units were redeemed and the proceeds due at redemption are included in Other Assets pending settlement of the dispute. In February 1996, the Bank filed a suit against the counterparty to recover the assets/amount with interest, covered by the said Banker's Receipt.

#### 7. Taxation

Tax liabilities in respect of Mercantile Bank Limited taken over by the India Branches are pending final outcome of the tax assessments/appeals filed by the Bank/Tax authorities relating to the assessment years 1974-75 to 1983-84 and those in respect of the Bank for assessment years 1984-85 to 1991-92. The amount of liability is not ascertainable In respect of assessment year 1992-93 and 1993-94 there is a Contingent Liability of approximately Rs. 427 million which is presently in appeal. Management consider that adequate provision has been made for tax liabilities relating to these items.

#### 8. Capital adequacy ratio

The Bank's capital adequacy ratio, calculated in accordance with the RBI guidelines, is as follows:

|                                            | As on      | As on      |
|--------------------------------------------|------------|------------|
|                                            | 31.3.1996  | 31,3.1995  |
|                                            | (Rs 000)   | (Rs 000)   |
| Tier 1 capital                             | 2,879,691  | 2,698,394  |
| Tier 2 capital                             | 1,411,345  | 435,317    |
| Total capital                              | 4,291,036  | 3,133,711  |
| Total risk weighted assets and contingents | 36,657,333 | 26,913,444 |
| Capital ratios                             |            |            |
| Tier I capital                             | 7.86%      | 10.03%     |
| Total capital                              | 11.71%     | 11.64%     |
| Comparative figures                        |            |            |

Certain comparative figures have been amended to conform with the current year's presentation.

#### Auditors' Report on the Financial Statements of the India Branches of The Hongkong and Shanghai Banking Corporation Limited under Section 30 of the Banking Regulation Act, 1949

We have audited the Balance Sheet of the India Branches of The Hongkong and Shanghai Banking Corporation Limited (incorporated in Hong Kong with limited liability) ("the Bank") as at 31 March 1996 and the related Profit and Loss Account for the year then ended. We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory.

In accordance with the provisions of Section 29 of the Banking Regulation Act, 1949, read with the provisions of sub-sections (1), (2) and (5) of Section 211 and sub-section (5) of Section 227 of the Companies Act, 1956, the financial statements are not required to be, and are not drawn up, in accordance with Schedule VI of the Companies Act, 1956. The financial statements are therefore drawn up in conformity with Forms A and B (revised) of the Third Schedule to the Banking Regulation Act, 1949.

In our opinion, the financial statements give a true and fair view of the state of affairs of the Bank as at 31 March 1996 and of its profit for the year then ended.

#### We further report that:

- (a) the financial statements are in agreement with the books of account and give the information required by the Companies Act, 1956 in the manner so required for banking companies;
- (b) the Bank has maintained proper books of account as required by law insofar as appears from our examination of those books;
- (c) the returns received from the branches of the Bank have been found adequate for the purposes of our audit; and
- (d) the transactions which have come to our notice have been within the powers of the Bank.

# AUDITORS' REPORT TO THE MEMBERS OF HONGKONG BANK (AGENCY) PRIVATE LIMITED

- 1 We report that we have audited the Balance Sheet of Hongkong Bank (Agency) Private Limited as at March 31 1996 and the relative Profit and Loss Account for the year ended on that date both of which we have signed under reference to this report
- 2 In our opinion and to the best of our information and according to the explanations given to us, the Balance Sheet and the Profit and Loss Account together with the notes thereon, give in the prescribed manner the information required by the Companies Act, 1956 and also give respectively, a true and fair view of the state of the Company's affairs as at March 31 1996 and its profit for the year ended on that date
- 3 We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit In our opinion, proper books of account have been kept as required by law so far as appears from our examination of the books and the abovementioned accounts are in agreement therewith
- 4 The Company is engaged in the business of supplying and rendering services. Accordingly, as required by the Manufacturing and Other Companies (Auditor's Report) Order 1988 dated September 7, 1988 and issued by the Central Government and on the basis of such checks as we considered appropriate and according to the information and explanations given to us, we further report that
  - The Company has not taken any loans secured or unsecured from companies, firms or other parties listed in the register maintained under section 301 of the Companies Act, 1956 and/or from companies under the same management as defined under sub section (1B) of section 370 of the Companies Act, 1956
  - The Company has not granted any loans secured or unsecured to companies, firms or other parties listed in the legister maintained under section 301 and/or to companies under the same management as defined under subsection (1B) of section 370 of the Companies Act 1956
  - III The Company has not granted any loans or advances in the nature of loans
  - iv The Company has not accepted any deposits from the public
  - v In our opinion there is a system of internal control commensurate with the size of the Company and the nature of its business
  - vi The paid up capital of the Company at the commencement of the financial year did not exceed Rs 25 lacs or the average annual turnover for a period of three consecutive financial years immediately preceding the financial year did not exceed Rs 2 crores and as such we are not commenting on its internal audit system
  - vii On the last day of the financial year there was no amount outstanding in respect of undisputed income tax, wealth tax sales tax customs duty and excise duty which were due for more than six months from the date they became payable
  - viii During the course of our examination of the books of account carried out in accordance with the generally accepted auditing practices we have not come across any personal expenses which have been charged to Profit and Loss Account, nor have we been informed of such case by the management
  - 1X The Company is not a sick industrial company within the meaning of clause (O) of Section 3(1) of The Sick Industrial Companies (Special Provisions) Act 1985
  - We have not reported on the matters contained in paragraph 4A(i) to (vi) (x) to (xii) (xiv) (xvi) to (xvii) in respect of fixed assets records and physical verification of fixed assets revaluation of fixed assets physical verification and valuation of inventories internal control procedures relating to purchase and sale of goods purchases and sales made in pursuance of contracts or arrangements entered in the register maintained under section 301 of the Companies Act 1956 unscruceable or damaged stores and raw materials or finished goods records for sale and disposal of realisable by products and scrap cost records and provident fund and employees state insurance dues respectively as they are not applicable to the Company in respect of the financial year under
  - xi In view of the hature of services rendered by the Company the matters specified in items (ii) to (iv) under paragraph 4(B) of the Order to the extent they relate to receipts issues consumption of materials and stores allocation between materials and manhours consumed stores and labour authorisation at proper levels are also not applicable

# البنك البريطاني للشترق الاؤستط The British Bank of the Middle East

HSBC Member HSBC Group

(Incorporated in England by Royal Charter 1889)

#### SCHEDULE 17

#### NOTES FORMING PART OF THE FINANCIAL STATEMENTS OF THE INDIA BRANCHES FOR THE YEAR ENDED 31 MARCH 1996

#### 1 Basis of preparation

- (a) The financial statements made upto 31 March 1996 comprise the accounts of the India Branches of The British Bank of the Middle East ("the Bank"), which is incorporated and registered in England. The Bank's ultimate holding company is HSBC Holdings plc, which is incorporated and registered in England.
- (b) The financial statements are prepared under the historical cost convention as modified by the revaluation of premises, and in accordance with the generally accepted accounting principles and the statutory provisions and practices prevailing within the banking industry in India

#### 2 Principal Accounting Policies

#### (a) Income recognition

Interest income is recognised in the profit and loss account as it accrues, except in the case of interest on doubtful debts

Fee income is accounted for in the period when receivable, except where the fee is charged to cover the costs of a continuing service to, or risk borne for, the customer, or is interest in nature. In these cases the fee is recognised on an appropriate basis over the relevant period.

#### (b) Transactions involving foreign exchange

- 1) Assets and liabilities denominated in foreign currencies are translated into Indian Rupees at the rates of exchange notified by the Foreign Exchange Dealers Association of India ("FEDAI") at the year end, except for those foreign currency non resident deposits eligible for conversion with the Reserve Bank of India ("RBI"), which are translated at the notional rates applicable to these deposits
- 11) Revenues and expenses are translated at the rates prevailing on the transaction date
- iii) Outstanding foreign exchange contracts are revalued at the forward exchange rate notified by FEDAI at the year end and the resultant gain or loss is included in the profit and loss account

#### (c Staff retirement benefits

Provision for retirement benefits in respect of pension and gratuity funds is made based on actuarial valuations conducted by a qualified actuary

#### (d) Net profit

The net profit in the profit and loss account is after providing for depreciation in the value of investments, provision for taxation, provision for doubtful advances, and other necessary provisions

#### (e) Securities

- 1) All securities, which cover both debt and equity securities, are classified as current securities and are valued at the lower of cost and market value in aggregate for each category of investments in compliance with RBI requirements, except for zero coupon negotiable instruments which are stated at carrying cost (i.e. cost adjusted for yield acciual)
- 11) Market value is determined in accordance with the RBI circular DBOD No BP BC 43/21 04 048/96 dated o April 1996. Quoted securities are valued based on market quotations. Unquoted securities are valued by reference to the yield to maturity as prescribed by the RBI.

## The British Bank of the Middle East

HSBC Member HSBC Group

(Incorporated in England by Royal Charter 1889)

#### (f) Advances

Advances are stated net of provision for doubtful advances and interest in suspense. Specific provision is made for doubtful advances as and when they are so considered, based on a periodic review and in line with the provisioning guidelines issued by the RBI. When there is no longer any realistic prospect of recovery, the outstanding advance is written off.

Interest on doubtful advances is credited to a suspense account which is netted in the balance sheet.

Interest on doubtful advances is credited to a suspense account which is netted in the balance sheet against the relevant balances

#### (g) Fixed assets

- Fixed assets are stated at historical cost less accumulated depreciation, with the exception of premises which are stated at valuation or cost less accumulated depreciation
- 11) Premises are revalued by professionally qualified valuers with sufficient regularity to ensure that the net carrying amount does not differ materially from the fair value Surplus arising from the revaluation is transferred to Capital Reserve' account
- iii) Depreciation is calculated to write off the assets over their estimated useful lives on straight line basis as follows
  - Freehold land is not depreciated
  - Premises are depreciated at 2% per annum
  - Other fixed assets are depreciated at 20% per annum

#### 3 Retirement benefits

The Bank has made provision for pension payments to staff who retired on or before 31 December 1980 amounting to Rs 1 37 million and for the monthly payments relating to the Voluntary Retirement Scheme introduced in 1991 amounting to Rs 3 77 million based on actuarial valuation. This represents a change from the practice followed in the previous year wherein these costs were accounted for on a cash basis. Had the Bank not changed its policy, the net profit for the year would have been higher by Rs 5 14 million.

#### 4 Fixed Assets

The most recent revaluation of the freehold premises was conducted in December 1995 and the Bank revalued its owned freehold premises by Rs 189 million based on independent professional valuations

#### 5 Taxation

There is a contingent liability for assessment years 1991-92 1992-93 and 1993 94 of approximately Rs 52 million which is presently in appeal. On the basis of information and advice currently available, management does not anticipate any liability on the matters disputed by the tax authorities.

#### 6 Capital adequacy ratio

The Bank's capital adequacy ratio, calculated in accordance with the RBI guidelines is as follows

|                                                           | As on<br>31 3 1996<br>(Rs 000) | As on<br>31 3 1995<br>(Rs 000) |
|-----------------------------------------------------------|--------------------------------|--------------------------------|

| Tier 1 capital Total capital                              | 8 80%<br>10 22%                | 10 86%<br>11 25%               |

#### 7 Comparative figures

Certain comparative figures have been amended to conform with the current year's presentation

# البنك البريطاني للشرق الاؤسط The British Bank of the Middle East

HSBC 

Member HSBC Group

(Incorporated in England by Royal Charter 1889)

# AUDITORS' REPORT ON THE FINANCIAL STATEMENTS OF THE INDIA BRANCHES OF THE BRITISH BANK OF THE MIDDLE EAST UNDER SECTION 30 OF THE BANKING REGULATION ACT, 1949.

We have audited the Balance Sheet of the India Branches of The British Bank of the Middle East (incorporated in England by Royal Charter 1889) ("the Bank") as at 31 March 1996 and the related Profit and Loss Account for the year then ended. We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory.

In accordance with the provisions of Section 29 of the Banking Regulation Act, 1949, read with the provisions of sub-sections (1), (2) and (5) of Section 211 and sub-section (5) of Section 227 of the Companies Act, 1956, the financial statements are not required to be, and are not drawn up, in accordance with Schedule VI of the Companies Act, 1956. The financial statements are therefore drawn up in conformity with Forms A and B (revised) of the Third Schedule to the Banking Regulation Act, 1949.

In our opinion, the financial statements give a true and fair view of the state of affairs of the Bank as at 31 March 1996 and of its profit for the year then ended.

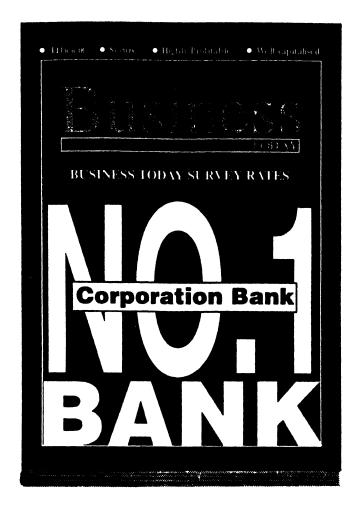

#### We further report that:

- a) the financial statements are in agreement with the books of account and give the information required by the Companies Act, 1956, in the manner so required for banking companies;
- b) the Bank has maintained proper books of account as required by law insofar as appears from our examination of those books:
- the returns received from the branch of the Bank have been found adequate for the purposes of our audit; and
- d) the transactions which have come to our notice have been within the powers of the Bank.

#### **Regional Growth**

With the revival of interest in neo-classical growth theory, researchers have been talking about 'endogenous' explanation of 'converging' or 'diverging' national growth rates across the world. While the major part of this research has focused on differential per capita growth rates among different groups of nations, a subset of researchers have been preoccupied with the question of convergence of regional growth rates within a specified geographic boundary. Some questions regarding the analysis of convergence as applied to Indian states.

2239

#### Privatisation of Commons and the Poor

Privatisation of common property resources is often decried on the ground that it deprives the rural poor of a critical source of livelihood and benefits only the rich and the powerful. The problem, however, gets complicated when the poor themselves encroach on the commons for their livelihood. Such a situation has arisen in the Marathwada region of Maharashtra where the dalits have encroached upon village common lands to establish ownership. A number of important agrarian issues arise in this context.

#### **Economic Diversification: A Household View**

It is common to study economic diversification at the regional level, but this approach is of limited use in understanding the reasons and processes by which an individual or a household diversifies economic activities. A study of economic diversification by households in rural Gujarat shows how while diversification can occur from a position of strength as a process of investment of surplus generated from primary activity, it can also occur from a position of vulnerability and be used as a household strategy of survival.

2243

#### **Lessons of Enron**

The Enron deal has given investors an unrealistic expectation of the returns they can hope to get under the government's power policy. The amended power purchase agreement negotiated by the committee appointed by the Shiv Sena-BJP government is even worse for the interests of the state than the earlier one. The balance of payments consequences of fuel imports for naphtha and fuel oil based power plants will be rumous. 2207

#### **Gendering Justice**

The Rupan Bajaj verdict has accomplished the subversion of the patriarchal traditions of the Indian state and a rupture of the boundaries between the political sphere and society, between the home and the world, between the workplace and the street, forcing a re examination of the categories through which these realities are comprehended 2223

#### **Purposeless**

In spite of being formally charged with a wide range of functions, the scheduled castes corporations in the different states continue to operate as extended arms of the state governments to dole out financial assistance

2217

#### In Bondage

For the first three decades after independence, the country's rulers refused even to acknowledge the phenomenon of debt-bonded labourers. Then in 1976 after the proclamation of emergency, the government viewed the passing of legislation abolishing bonded labour as synonymous with the freeing of all bonded labourers and cancelling of their debts. The hypocrisy of these postures is exposed by a small survey of five villages in Hallia block of Mirzapur district in UP.

#### Rejecting the Mass

The emerging gay and lesbian movement offers not just alternative identities but prospects for social reconstruction in spite of its marginality, the movement rejects the monolith and the mass. It is a reminder that if forced conformity is to be resisted, it must be by representing human lives as multiple, selfhood as several and communities as voluntary and various. 2228

#### **Many Russias**

In addition to splitting Russian society vertically into the rich and the poor, Bons Yeltsin's policies have enriched a few of the country's regions while vastly impoverishing the others 2226

#### S C Dube

LIKE K N Raj (July 20), I too was taken aback by Krishna Kumar's severe criticism of Andre Beteille's obituary note on the late S C Dube (June 29). No reader with an open mind could regard it as anything but a sincere tribute to the many-sided contributions of Dube towards the development of social anthropology and sociology in India. By no means can the note be characterised as "tongue in cheek".

Beteille thought - and rightly, I think that if Dube had been head of a department located in a big city instead of Saugar, his impact on the discipline would have been even greater. While making this statement I am aware that Saugar University had several brilliant men such as Daya Krishna, but that does not alter the fact that Saugar is a "provincial town". In this connection, I may add that in the late 1960s I was a member of a selection committee to choose a professor of anthropology at Lucknow and the committee unanimously recommended Dube for the position. But since Dube did not appear in person for the interview, the rival candidate obtained a stay order from the court. Dube's record was distinguished enough even then for him to be invited to the position, but I do not know if Lucknow had such a provision in their rules.

Reading Rai's letter one may get the impression that Krishna Kumar is a

sociologist. He is professor of education in Delhi University. I mention this for the record.

M N SRINIVAS

Bangalore

K N RAJ's letter (July 20) in defence of Andre Beteille's obituary of S C Dube is touching, but it misses both the points made in my letter (June 29) which I hardly need to reiterate. It is disturbing to realise how easily scholars can attribute motives. Rai suggests two in my case: hero-worshipping of Dube or a personal grievance against Beteille. I am happy to dismiss both. Indeed, they are rather ludicrous.

KRISHNA KUMAR

Delhi

#### Withdraw Ban Order

PUDR unequivocally condemns the recent ban order by the A P government on the CPI(M-L) [People's War] and six mass organisations. The organisations were first banned in 1992 by the Congress government. A legislation called the A P Public Security Act was enacted at that time in order to impose the ban. The ban order which was valid for one year was renewed for two successive years. In June 1995 the TDP government lifted the ban. The timing of this had a direct relation with the impending election to the Lok Sabha.

Today, three months after the elections the Naidu government has cited increase violence and lack of development as reason for justifying the reimposition. Both of thes reasons are frivolous and lack credibility Government figures claim that violence by the People's War has increased - a total o 416 persons, including policemen, have been killed between 1993 and July 1996. Violenc per se is no justification for imposing a bar. For, the Indian Penal Code lists every possible violent act as an offence and specifie punishments for each. The ban order therefore, is only an attempt to illegitimise and declare an offence, the holding of particular political belief and ideology.

The charge that People's War is responsible for preventing development is ridiculous The social structure of these region dominated by landlords, traders and contractors prevents development. The stat government too has taken no initiative i this regard. Thus, questions regarding lanreforms, forest dwellers' rights over fores land, abolition of money lending, and fai wages form the major demands of thes organisations. The imposition of the ba conveniently converts these pressing socia questions into law and order problems. Thi attitude has already led a large number o people's movements to lose respect for th state, and its lews.

Such a state of affairs has come about i the context of the state abdicating it responsibility to solve social and politica problems as well as respect for its own law! Imposing a ban becomes merely justification for killing people on the basi of their beliefs. In this context it needs t be noted that 256 people were extra-judiciall killed in encounters by the A P police i 1992, the year the ban was initially imposed Since then 387 more people have bee killed in a similar manner. The ban orde merely seeks to justify and legitimise thi illegal violence by the police. A petition b the A P Civil Liberties Committee pendin before the NHRC highlights the complet lack of accountability of the A P police i the murder of 496 people between 1991 1993. It is not strange, therefore, that the P government has asked for additional centra forces soon after imposing the ban. The ba order, therefore, speaks of the government' own lack of respect for the law and th Constitution, PUDR demands the immediat withdrawal of the ban order and an end t encounter killings.

# Small Change for Banks

THERE is a fear that with the focus on the bottomline under the dispensation of financial sector reforms, commercial banks would disfavour small borrowers who are said to have higher servicing costs. Evidence shows that the growth of advances to the household sector (consisting of individuals. and unincorporated enterprises) has been considerably below that to corporate enterprises in the public and private sectors. Between March 1991 and March 1993, bank credit to the household sector rose by 22 per cent compared to a rise of 40 per cent and 52 per cent in that to the private and public corporate sectors, respectively. Likewise, there has been a significant decline in the share of priority sector advances in total bank advances and the authorities have tried to ease the enforcement of this major social goal by enlarging the scope of the priority sector (by including indirect agricultural credit, credit for larger small-scale units and export credit in respect of foreign bank branches) and by permitting banks to transfer the shortfall in favour of the Small-Scale Industries Development Bank of India (SIDBI) and the National Bank for Agriculture and Rural Development (NABARD). Despite these relaxations, advances to agriculture constituted only 14.3 per cent of net bank credit at the end of March 1996, which was not only significantly lower than the target of 18 per cent but also lower than what it was (15.1 per cent) two years ago at the end of 1993-94. Similarly, the share of all priority sector advances in total net bank credit has remained at 37.8 per cent for the past three years, or well below the 40 per cent target.

The share of rural branches in total bank credit has steadily come down from the peak of 15.3 per cent in the second half of the 1980s to 11.1 per cent in March 1996. The share of semi-urban branches has similarly fallen from 16-17 per cent to 12.7 per cent. The credit-deposit ratio of rural branches, which had crossed the government prescribed level of 60 per cent, has slipped to 47.7 per cent as per the latest quarterly statistics for March 1996. The C-D ratio of semi-urban branches has fallen from 55 per cent to 40.6 per cent. On the other hand, the concentration of bank credit in the top 100 centres of the country has been steadily rising in the post-reform period from around 67 per cent during March 1990-March 1991 to 72.5 per cent in March 1996.

It is necessary to draw attention to these developments at a time when the RBI has been harping on the importance of the central bank's autonomy. Should not autonomy be accompanied by responsibility and accountability for achieving social goals? It is quite likely that even public sector banks will continue to move away from retail banking and small borrowers. There is evidence of this in the RBI's latest survey

of small borrowal accounts for the period up to March 1993. The results of the survey together with the RBI's regular banking statistics under what is called the 'Basic Statistical Returns' (BSR) suggest that the share of small borrowal accounts in total advances has dwindled, even though a sizeable proportion of such accounts are part of socially-oriented policies such as lending in rural centres for agriculture and priority sectors, for scheduled castes and tribes and women and, above all, for beneficiaries of IRDP and other special employment-oriented programmes.

As per the BSR data, small borrowal accounts with credit limit of Rs 25,000 or less constituted 95 to 95.8 per cent of total borrowal accounts of scheduled commercial banks between June 1984 and March 1990; thereafter there occurred a slight decline to 94.2 per cent by March 1993. The decline has been much more perceptible in the share of small borrowal accounts in total bank credit outstanding, from a peak of 25.4 per cent in June 1989 to 19.8 per cent in March 1993. No doubt, in the intervening period there were, loan waivers under the Agricultural and Rural Debt Relief Scheme of 1990, implemented between May 15, 1990 and June 30, 1991, which gave debt relief up to Rs 10,000 to certain categories of eligible borrowers of public sector commercial banks, RRBs and co-operative banks. Public sector commercial banks and RRBs waived loans to the extent of Rs 3,629 crore under the scheme. But, significantly, the expansion of bank credit to small accounts got stunted thereafter. Between March 1991 and March 1993, the number of small accounts declined from 588 lakh to 585 lakh, whereas the number of big-size accounts rose from 31 lakh to 36 lakh. Further, the outstanding credit to small accounts went up by just 17.8 per cent from Rs 27,323 crore to Rs 32,091 crore over the two-year period whereas that to the rest of the accounts rose by 34.6 per cent from Rs 96,880 crore to Rs 1,30,376 crore (which is only fractionally due to the fall in the value of the rupoe).

The RBI's survey also provides an interesting profile of the small borrowal accounts. About 87.6 per cent of small accounts and 62 per cent of the amount outstanding were accounted for by accounts with credit outstanding of Rs 10,000 or less. The bulk of small lending has been in favour of agriculture – 45.8 per cent of the number of accounts and 42.4 per cent of the amount. Trade and personal and professional services were the next in importance. Significantly, artisans and craftsmen and village industries together had a negligible share of 5.2 per cent in accounts and 3.6 per cent in amount. Rural bank branches accounted for 58.8 per cent and 49.2 per cent of small advances in terms of accounts and amount, respectively, and semi-urban branches for 25.4 per cent and 28.5 per cent,

respectively. In other words, urban and metropolitan branches more or less shun small accounts. Women beneficiaries have 16.4 per cent of the accounts and 13.6 per cent of the amount. Scheduled caste and scheduled tribe borrowers had 27.6 per cent and 17.6 per cent, respectively. Between April 1992 and March 1993, Rs 136 crore pertaining to 8.3 lakh small borrowal accounts (1.4 per cent of accounts and 0.4 per cent of amount) were written off. There is no information on write-off in respect of large borrowers. But going by data on nonperforming assets (NPAs), the performance of small borrowers is far superior to that of the big accounts. NPAs of public sector banks in respect of advances with balances less than Rs 25,000 were Rs 3,982 crore as of March 31, 1995 which constituted only 10.4 per cent of their total NPAs in respect of all categories of borrowers (Rs 38,385 crore). This proportion is considerably lower than the share of small borrowal accounts in total bank credit of about 20 per cent.

Above all, what stands out is that banks on their own would not have extended any significant amount of small-size loans. Apart from the requirements of priority sector advances and targets for weaker sections and women entrepreneurs, and 60 per cent creditdeposit ratio in rural areas, the involvement of banks in special employment and assetcreating programmes has contributed a great deal to inducing banks to extend small loans. The RBI survey reveals that 34.2 per cent of small borrowal accounts and 22.6 per cent of the amount of borrowing as at the end of March 1993 were attributable to the coverage of beneficiaries under the Integrated Rural Development Programme (IRDP). Other employment programmes such as selfemployment programme for the urban poor (SEPUP), self-employment for educated unemployed youth (SEEUY), scheme for urban micro enterprises (SUME) and the differential interest rate scheme (DRI) covered another 10 per cent of accounts and 8 per cent of amount, so that 43 per cent of accounts and 31 per cent of the amount of small borrowers are on account of these special schemes. While banks undoubtedly classity and reclassify their borrowers to satisfy different obligations for priority sector, IRDP and other lending, the data resterate the sole of directed credit in taking bank credit to the socially and economically underprivileged.

**PDS** 

#### **Confusing Decision**

WHAT does one read into the ultimate conclusion to which the recent conference in New Delhi of state food ministers reached in regard to the targeting of the public central food minister Devendra Yadav claimed success in persuading the conference to endorse the proposal for targeting the PDS, the fact is that the state food ministers agreed to targeting on two conditions: one, that their requirements of rice and wheat for the PDS, as it is at present, would be met fully; and, two, that the central issue price would continue to be substantially below the market price. The centre had obviously to make major concessions in order to have its proposal for targeting accepted and it is uncertain that in the process the centre did not give away quite a lot. After all, the whole exercise was undertaken with a view to (a) reducing the burden of food subsidy on the exchequer, and (b) concentrate the benefit of PDS on poor households. In fact, the opposite will be the financial outcome of the conference's decision. The burden of tood subsidy on the exchequer will go up by another estimated Rs 3,000 crore because while the non-poor will continue to enjoy the benefits they currently enjoy, the poor so identified will get the benefit of still lower prices - equal to 50 per cent of the central issue prices.

Surprisingly, the leading opponent of the central proposals was a communist minister from Kerala whose reported concern for the non-poor of his state not only in regard to the availability of foodgrains but at below market prices seemed to be in striking contrast to what needed to be done for the genuinely poor. True, Kerala is a major food deficit state and ought to be genuinely assured about availability, but why should the nonpoor in the state continue to get foodgrains at specially low prices when this benefit could be extended in larger measure to the poor within the same budgetary provision? Why Kerala is sending such conflicting signals, be it on the PDS or the so-called 'creamy layer', is a question worth closer examination

#### **POLITICS**

#### Remote Control

IF Bal Thackeray holds the remote control in running the government in Maharashtra, it is Narasimha Rao who seems to wield the magic wand in Delhi. Judging by the way prime minister Deve Gowda is bending over backward to keep him in good humour, one wonders whether the two have not struck a tacit understanding whereby Rao is able to call the shots (to protect himself) in exchange of his party's support to the wobbly coalition at the centre.

Surely, the most amazing spectacle in recent years was the much publicised visit to Rao by the new CBI chief Joginder Singh on the preposterous plea of seeking Rao's 'blessings' in his new job. Singh of course

distribution system (PDS)? Although the "tried to fob it off by bunching it up with " similar visits to other ex-prime ministers. But Rao is no ordinary ex-PM. Here is a person allegations against whom are being investigated by the CBI. The Supreme Court, while taking serious note of this unprecedented behaviour of a CBI official. pulled up Singh by telling him that he had taken his first step as the new CBI chief in the "wrong direction". Singh's indiscretion - as it is being looked upon by the apex court could not have been a faux pas committed by a greenhorn. Joginder Singh is an old hand in the sleuthing profession. He is known to have worked as a senior official in Karnataka when Deve Gowda was chief minister and is reported to have been close to him. The political grapevine in the capital has it that Singh's visit to Rao had Deve Gowda's green signal and was deliberately orchestrated as a public display (from Singh greeting Rao and getting closetted with him at a party in Delhi and later accompanying him to his home - all in full view of the press and reported in the capital's newspapers) in order to assure Rao of the position which he still enjoys in prime minister Deve Gowda's esteem. It was a political gesture, similar to the habit of frequent visits to Sonia Gandhi that both Rao and his rivals in the Congress indulged in when they were in power. Since Deve Gowda has to depend on the support of the Congress, of which Narasimha Rao happens to be the chief, he has no alternative but to continue to placate Rao, till Congressmen themselves get united and gather enough guts to get rid of a leader who not only stands indicted on corruption charges but had also failed miserably during his tenure as prime minister of the country.

Pending such a change in the leadership of the Congress Party, one can understand Deve Gowda's compulsion to meet whatever demands Rao might be voicing in his private negotiations with the prime minister - which seem to be quite frequent given Deve Gowda's habit of dropping in at Rao's home every now and then. While these visits are being reported in the national press ostensibly as part of the policy of 'transparency' claimed to be followed by the United Front government - what really takes place during these meetings between a prime minister and an ex-prime minister (who is arraigned as an accused in financial scandals) remains opaque to the Indian public.

But the announcement of certain official policies soon after such confabulations indicates the drift of the United Front government - a dangerous one towards protecting suspected criminals in order to retain their support for survival in power. The controversial proposal to give cabinet status to former prime ministers, with all the immunity that goes with such status, is again being viewed as calculated to bail out Narasimha Rao from the numerous cases in which he is embroiled.

That such blatant efforts to protect and please Narasimha Rao are not shared by the other constituents of the United Front government is evident from the CPI home minister Indrajit Gupta's feeble efforts to bring about tough measures to punish guilty politicians and his outbursts of frustration at his failure to carry them out. At the National Council meeting of his party recently, he was reported to have confessed that he could not put an end to the politician-police criminal nexus that operated all over the ministerial territory that he is supposed to be ruling over. Even during the few months that he had been occupying the home minister's office, the measures that he had announced had either been rejected or ignored by the cabinet and on other occasions he had not been apparently consulted in major decision-making. To start with, his proposal to reduce expenditure on protection for VIPs by withdrawing SPG protection from a large number of politicians who did not deserve it - welcomed by citizens who constantly face inconveniences in their daily movements because of SPG interference in civic living - has been scuttled. He was not even consulted - which as the home minister he should have been - by the Deve Gowda cabinet when it decided to appoint as the governor of Uttar Pradesh a bureaucrat like Romesh Bhandari (against whom the Left Front has strings of allegations). To cap it all, he was not apparently taken into confidence by his own officials in the home ministry who mooted, processed and cleared the proposal to give cabinet rank status to former prime ministers (including Narasimha Rao) - a development of which Indrajit Gupta claims to have been ignorant, according to his statement at a press conference on August 12.

Any minister with an iota of self-respect should either punish officials who defy his instructions or resign if he cannot get his instructions carried out. Does the CPI veteran as the country's home minister propose to demean himself as a doormat of the Deve Gowda-Narasimha Rao political alliance?

#### FOREIGN EXCHANGE

#### **Shadow Is Substance**

THE Reserve Bank of India (RBI) has permitted bank branches authorised to deal in foreign exchange to offer, without prior approval, various liability management instruments to Indian corporates so as to enable the latter to hedge their risk on their foreign currency liabilities. Also, no prior approval is required either to unwind hedge transactions or to remit upfront premia and other charges incidental to the hedge transactions. Banks can now offer all types of hedge instruments such as interest rate

swaps, currency swaps, coupon swaps, purchase of interest rate caps and collars, and forward rate agreements to corporates. These have become particularly relevant in the context of a sizeable amount of external commercial borrowings outstanding (placed at \$5.6 billion) and more significantly the fresh ECB guidelines which may imply about \$ 5 to 6 billion of additional borrowings in the coming year, particularly for infrastructure projects. The RBI has taken the precaution of insisting on final approval for the underlying loan transaction and restricting the notional amount of the hedge to the loan outstanding and the period of the hedge to the maturity of the loan.

The RBI will have full details about the hedge transactions (booked as well as cancelled) but the central bank's record in regard to sharing this information so as to make possible evaluation of the results of its operations and derive lessons for the future is suspect. In the first place, the RBI has ceased to put out even the limited amount of data on its purchases and sales of foreign exchange through authorised dealers. The data which used to be released on a monthly basis were rudimentary, without information on different aspects of foreign exchange transactions. Secondly, though the RBI has enough information on the daily turnover of foreign exchange in the Indian forex market, no authentic information is made available to the public. A recent survey has placed the daily turnover in the forex market at between \$1.5 bn and \$2.5 bn Of this, about 60 per cent (\$1bn to \$1.5 bn) is reportedly for spot delivery and the balance for forward deals.

The Bank for International Settlements (BIS) has been co-ordinating a triennial 'central bank survey of foreign exchange market activity' since the mid-1980s. In conjunction with the fourth survey in the spring of 1995 by central banks and monetary authorities in 26 countries, a survey of derivatives market activity was also carried out. The results bring out the mindboggling range and depth of changes that have taken place in the world financial markets, particularly in the second half of the 1980s and the early 1990s.

First, the range of financial instruments has vastly expanded. In 1980 only a few countries had established markets in treasury bills, certificates of deposit (CDs) and commercial paper (CP): by 1991 almost all major countries had such instruments. The accumulation of government debt lent breadth and depth to short- and long-term government securities markets. Replacing traditional bank deposits and bank loans, financial and nonfinancial business tended to rely more on marketable instruments such as CDs, CP, floating rate notes (FRNs), bonds, shares and related instruments. Even traditional bank loans and enterprise receivables got secu-

ritised in some of the countries, particularly in the US to begin with.

Secondly, with the easing of restrictions on foreign exchange transactions, capital flows across borders and cross-border transactions multiplied. As regulatory systems converged and became less restrictive, the distinction between domestic and offshore markets got increasingly blurred, which has also contributed to the generation of large inter-bank transactions.

Finally, there has emerged a massive market for 'derivatives' or contracts derived from the principal or primary issues. The first stage of these derivatives was purchase and repurchase agreements (repos), forward transactions or swaps in the foreign exchange market (a spot purchase and forward sale of one currency against another) and similar kinds of off-balance sheet or below-the-line contingency items. Securitisation of loans, though derivative in character, is an onbalance sheet item. The second phase of derivative products, which has registered remarkable expansion since the latter half of the 1980s, relates to (a) interest rate and currency futures and options, and stock market index futures and options traded on the organised exchanges, and (b) interest rate and currency swaps and other swap-related derivatives traded over-the-counter (OTC). The combination of derivative-underlying instruments (financial swaps, futures and options) and the further derivation of exotic products that are a hybrid of the former has added further dimensions to this market.

Data on foreign exchange market activities, on cross-border transactions and on derivatives trading speak of the unbelievable layers of transactions and their magnitudes The average daily global foreign exchange turnover, net of all double-counting, has galloped from an estimated \$82.5 bn in 1980 to \$270 bn in 1986, to \$640 bn in 1989 to \$880 bn in 1992 and finally to \$1,300 bn in 1995. In other words, the average turnover in the foreign exchange market on a single day in 1995 exceeded the stock of aggregate global foreign exchange reserves held by all official agencies together (\$1,202 bn); in 1980, the official reserves had constituted nearly five times the daily turnover. In India's case, the estimated daily turnover of \$1.5 bn to \$2.5 bn is just about 10 to 15 per cent of the country's foreign exchange reserves.

More significantly, in 1995, against the export value of nearly \$6 trillion, there was a turnover of \$325 trillion of annual global foreign exchange volume (assuming 250 working days in a year), that is, a little over 54 times; the corresponding multiple was about 21 in 1980. According to the details for 1992 (as the 1995 details are not available), over 81 per cent of global foreign exchange transactions were, as per maturity classification, for round-trips of seven days or

foreign exchange trading has been fairly constant as nearly 80 per cent of the daily foreign exchange trading is done by the top seven financial centre countries, with the UK (27 per cent in 1992 and 30 per cent in 1995). the US (16 per cent) and Japan (11 per cent in 1992 and 10 percent in 1995) topping the list. The US dollar continued to dominate, with transactions involving this currency on one side constituting 90 per cent in 1989 and 82 per cent in 1992 and 84 per cent in 1995; the other currency to show a rise from 27 per cent in 1989 to 40 per cent in 1992 and 37 per cent in 1995 was the deutsche mark because of its dominance in European Community transactions.

The survey results make clear that the growth of foreign exchange trading has been overwhelmingly motivated by purposes other than those of servicing the direct financing requirements of real sector activities. First. the share of swap transactions in total global forex trading rose from 38 per cent in 1989 to 48 per cent in 1995. Secondly, nearly three-fourths (72 to 73 per cent) of both spot and swap transactions in 1992 were dealer to dealer rather than dealer to direct-finalcustomer transactions. The central banks were involved in probably less than 10 per cent of global forex transactions in 1992. The OECD has reported that since 1975 the fastest growing component in the expansion of international service trade has been the financial services trade, which has been growing at 13 per cent per year.

The survey for 1995 has collected, apart from the size and various dimensions of foreign exchange operations, details on the derivatives market from central banks and monetary authorities from 26 countries for the first time. The BIS has been reporting, in its annual report and in monthly reports on international banking and financial market developments, regular series of statistics on the size of notional amounts involved in derivative transactions, separately in respect of OTC and organised exchanges although. as the above reveals their coverage has been limited. Nevertheless, these data along with the BIS data on cross-border transactions provide a perspective on the dimensions of primary claims in the form of net international bank credit, Euro-note placements and net international bond financing, juxtaposed against the notional amounts of derivatives.

According to the latest triennial survey, the notional amounts of OTC derivative contracts outstanding, net of double-counting, stood at \$40.71 trillion as at the end of March 1995, which did not cover the data on outright forwards and foreign exchange swaps of survey participants in the UK Including the data for UK (which are available separately), the notional amount of OTC transactions aggregated about \$42.14 trillion, of which

for \$26.65 trillion (63.2 per cent), and currency swaps \$14.58 trillion (34.6 per cent). Compared with these pure financial contracts, those OTC derivatives based on equity and commodity price indices accounted for minuscule amounts, one per cent each (\$599 million and \$317 million, respectively).

Of contracts traded on the recognised exchanges, an even more preponderant part is in the form of interest rate futures and options. Of the total notional amounts of \$16.6 trillion of exchange traded costs, \$15.7 trillion (95 per cent) were interest rate contracts and only \$120 mn were in the form of currency futures and options and \$787 mn in equity and commodity price indices together.

A preponderant part of OTC contracts, ranging from 84 per cent in foreign exchange contracts to 89 per cent in interest rate contracts, was either dealer-to-dealer or with other financial institutions; thus the part of contracts with non-financial customers was only 16 per cent in foreign exchange and 11 per cent in interest rate contracts.

A study on German banks' derivatives transactions shows that savings banks, regional institutions, credit co-operatives and other banking institutions, which cover 53 per cent of the total banking business in Germany, accounted for only 7.7 per cent of the total derivative transactions; in their case derivatives constituted 0.5 per cent to 28.3 per cent of their total business. On the other hand, in the case of big banks, derivatives constituted 182.8 per cent of their volume of business, and in the case of regional and private banks, the corresponding ratios varied from 110 per cent to 121 per cent. In general, the institutions which contribute to the saving process do not need to indulge in large trading in derivatives even in advanced countries.

#### **UTTAR PRADESH**

#### **Uttarakhand Card**

THE announcement of his government's decision to form a separate hill state of Uttarakhand is a strategic move of prime minister H D Deve Gowda to strike at a Bharatiya Janata Party (BJP) stronghold in UP, keeping in view the forthcoming assembly elections in the state. Though other alternatives of granting autonomous hill council or union territory status existed, the prime minister's decision to bestow full-

met the long-standing demand of the Uttarakhand agitationists.

Uttarakhand is one of the regions in UP to have come under the BJP's spell. BJP won 10 out of 19 assembly seats in the region in the 1993 vidhan sabha polls. The Congress, which had previously reigned supreme in the region, was trounced. The announcement of separate statehood for Uttarakhand will not benefit the Congress(Tiwari) or any of the constituents of the United Front which have hardly any presence in the hill region. It is the Congress(1) which, taking advantage of the infighting within the BJP regional unit, won two Lok Sabha seats in the elections earlier this year. These two seats covered six of the 10 assembly seats won by the BJP in the 1993 elections.

Though the Uttarakhand area accounts for only 19 of the 425 seats in the UP assembly. the importance given to the separate state demand by Deve Gowda has perturbed the CPI(M), which fears a revival of the demand for Gorkhaland in West Bengal. On the other hand, Laloo Prasad Yadav who faces the demand for a Jharkhand state in Bihar has not made any discordant noises on the prime minister's announcement. Perhaps he is hoping that a stepping up of political activity by the Jharkhand organisations in support of the separate state demand may help in reducing the influence of the BJP and the Samata Party in the region where the Janata Dal has hardly any stakes.

The importance given to Uttarakhand also needs to be seen in the context of Deva Gowda'a attempts to win over the farming community of western Uttar Pradesh which happens to be another stronghold of BJP in the state. In the 1993 assembly elections, the Hindutva wave had succeeded in weaning away farmers from Mahendra Singh Tikait's Bharativa Kisan Union and in confining Ajit Singh's influence to Baghpat. By teaming up with Tikait, Deve Gowda aims to make inroads among the jat farmers of the region. In a recent rally at Sisauli, the hometown of Tikait in Muzzaffarnagar district, Deve Gowda while sharing the dais with Tikait had announced an increase in subsidy on fertilisers and tractors and a reduction in the power tariff. Tikait too aims to revitalise his organisation which of late has been going through a phase of low activity. Whether these concerted attempts of Deve Gowda to target BJP strongholds in UP will yield any electoral gains for the United Front in the assembly elections remains to be seen.

#### **Special Number**

In view of a Special Number to be published in early September, there will be no weekly issues on August 31, September 7 and 14.

### CURRENT STATISTICS

With the FIIs keeping out and the new margin systems introduced by the exchanges, trading volumes on the major stock exchanges have plummeted since the beginning of August and share price indices have been on a roller-coaster ride. Growth of both exports and imports has slowed down in the first quarter of 1996-97, but the trade deficit has surged to almost \$1 be on account of higher oil imports. Mid-year population estimates show a steady deceleration in the rate of population growth from 2.14 per cent per annum in the 1980s to 1.70 per cent per annum in the 1980s to 1.70 per cent per annum in the 1980s to 1.70 per cent per annum in the 1980s. While the population growth rate in most southern states is well below the national average and is expected to fall further in the next quinquennium, the growth rate in even UP is expected to decelerate to such an extent that it would be lower than the all-India average by the end of the century.

Estimated figures are provisional ... denotes data are not available separately Figures within brackets are implied annual growth rates, in percentages

The annual estimates from 1992 onwards are based on the Report of the Standing Committee of Experts on Population Projections (October 1989) and are adjusted to the ratio of 1991 Census population to the 1991 projected population of the above Report. This factor was applied to India and each State and Union Territory individually.

The aggregate over the States and Union Territories (A+B) will not all facility with India figure which is estimated directly: the differences and Union Territories (A+B) will not all figures for the state are projected by the above Standing Committee of Experts.

In 1991, Census was not conducted in Assamir; the population figures for the state are projected by the above Standing Committee of Experts.

In 1981, Census was not conducted in Assam; based on the 1971 Census population and the 1991 Census provisional results; the population of Assam for 1981 has been interpolated. €ē Notes:

Ţ

#### RAYMOND

#### **Planned Diversification**

HAVING ventured into cement, steel and denim. Raymond, the flagship company of the Vijaypat Singhania group, is no longer known as the textiles company. The focus has shifted from textiles to a wider base. According to Minoo Shroff, executive vice-chairman, high on the priority list now is seeing that these ventures "grow to their logical size".

Raymond closed the year ended March 1996 with a 24 per cent increase in sales turnover which moved up from Rs 683 crore to Rs 854 crore. Other income was up by 22 per cent. Interest costs rose by 60 per cent. Provision for depreciation was up by 23 per cent. Aided by 65 per cent decline in tax provision the company closed the year with a net profit of Rs 96 crore, up by 36 per cent from Rs 71 crore recorded in the previous year. Raymond has maintained dividend payment at 50 per cent.

The production of fabrics improved by 19 per cent to touch 238 lakh metres. The company plans to achieve a production of 255 lakh metres from its three plants at Thane, Chhindwara and Jalgaon. This is to be achieved through product innovation and induction of new technology. The company has invested in shuttleless looms at Thane and Chhindwara. Plans on the anvil include replacing 100 looms in a year's time which would give the company an added 5 million metres of worsted fabrics at an investment cost of Rs 48 crore. Raymond has a 40 per cent market share for its blended and worsted suitings. About 15 per cent of the turnover from the textile division is targeted at the premium end of the market, another 15-29 per cent targeted at the lower end, while the balance 65-70 per cent is aimed at the middle class.

Apart from the plant at Bilaspur, the company has units at Nashik, Thane, Yavatmal, Jhansi and Sasnar. Paralysed by severe power cuts and the perennial wagon shortage, production at the company's plants at Bilaspur was below target during the year, though aided by higher realisation the division performed to satisfaction. Capacity utilisation remained stagnant at around 73 per cent. The acquisition of 125 wagons last year under the 'own your wagon' scheme of the railways and the installation of additional diesel sets of 12 mw capacity is to alleviate the position considerably and cement output is to go up by 20 per cent.

At the steel plant in Nashik which was commissioned in September 1995, Raymond has an installed capacity of 40,000 tonnes per annum (tpa) of cold rolled non-grain oriented steel, 25,000 tpa of grain oriented silicon oriented steel and 1,35,000 tonnes

of cold rolled closely annealed steel – all of which are high value added speciality steel products. Against an estimated production of 23,000 tonnes the steel plant produced only 10,000 tonnes. The plant is expected to operate at 70 per cent capacity in the current year. With the successful implementation of the steel project, plans for a further expansion of the silicon steel capacity are on the anvil.

The cement division is to set up a plant in the south with a capacity of 2.4 million tonnes with Gulbarga in Karnataka having been identified as a potential site. The idea is to have split units at two locations. A plant to take care of the clinkerisation is to be put up in Karnataka whereas the unit that will grind the cement will be based in the north. The construction of these plants is reportedly to be completed within the next two years.

The textiles division is coming out with a new single yarn fabric which is expected to reduce costs and produce lighter fabrics. It is also looking at the prospect of producing high quality shirting material and readymade shirts across the counter, different from the Park Avenue range of garments currently available. The 100 per cent cotton project has its base at Yavatmal. With the initial capacity of 30,000 metres per day and 10 million metres per annum of high quality ringed denim, the company expects to start trial production by September.

The company has entered into an agreement with Marzotto of Italy and with Zenia of Italy to manufacture high quality garments in small batches. Raymond has also entered into a joint venture with Calitri Denim Industries of Italy to manufacture world class denims and jeans in India. The cost of the project is estimated at Rs 140 crore of which Rs 50 crore is to be brought in by the collaborator

#### **ORIENT PAPER AND INDUSTRIES**

#### **Higher Turnover**

Orient Paper and Industries, formerly known as Orient Paper Mills, the flagship company of the GP Birla-CK Birla group, with operations centring around paper and cement, was incorporated in Calcutta in 1936. The company has plants in Madhya Pradesh, Orissa, Andhra Pradesh, West Bengal, Haryana and Uttar Pradesh.

The company closed the year ended March 1996 with a sales turnover of Rs 586 crore, up by 51 per cent from Rs 389 crore recorded in the previous year. Other income was down by 22 per cent. Interest costs rose by 31 per cent. Provision for depreciation was down by 19 per cent while that for tax moved up by a whopping 168 per cent. Orient Paper closed the year with a net profit of Rs 54

crore, up by 110 per cent from Rs 26 crore in the previous year.

For the year under review the production of paper and board stood at 1,28,307 tonnes compared to 1,20,868 tonnes in the previous year. The severe power cut by the Andhra Pradesh State Electricity Board notwithstanding, cement production improved to 10,27,202 tonnes compared to 9,56,844 tonnes in the previous year.

At the Brajrajnagar Mills a new transformer-cum-rectifier for a captive caustic plant and a new coal handling plant have been installed and commissioned. A 350tpd recovery boiler and an additional drum chipper are under installation. At the Amlai paper mills a similar construction is under way. According to reports, a bagasse-based paper project in Solapur to be commissioned by June 1996 with a capacity of 80,000 tonnes per annum of writing and printing paper was abandoned in the absence of a positive commitment for supply of raw material.

The company has received permission from the government of Kenya to set up an export oriented rayon grade pulp mill and the company's Panafrican Paper Mills, a joint venture of Orient Paper with Panafrican Paper Mills, Kenya, will be setting up this greenfield venture which is expected to be commissioned soon.

#### **BAYER**

#### **Business Restructuring**

Bayer with interests in agrochemicals, rubber products and consumer and animal healthcare has been operating in the Indian market since 1958 in technical and financial collaboration with parent company Fabenfabriken Bayer AG of Germany.

In keeping with the accounting period followed by its parent, Bayer has changed its accounting year to the calendar year and has reported a sales turnover of Rs 267 crore for the nine-month period ended December 1995, an annualised increase of 27 per cent over Rs 279 crore recorded for the year ended March 1995. A significant contribution came from other income which stood at Rs 12 crore. Interest costs were up by 77 per cent. Provision for depreciation moved up by 17 per cent. Against a zero tax provision in the previous year the company had to make a provision of Rs 1 crore for the year under review. A dividend of 12 per cent has been recommended by the board of directors.

Agrochemicals manufactured at the Thane factory, the oldest activity, was the major contributor to the turnover followed by rubber, healthcare, consumer care and animal health. The sales of the agrochemicals division showed a significant improvement. The company has a 60 per cent share of the

Strate Barre (Rs lukh) agrochemicals market. Bayer commissioned a capacity of 800 tpa for metasystox, a pesticide widely used for plant protection, at its factory in Thane in April 1995. From the current year on the company is to source its entire requirement of metasystox for the parent company. In the domestic market the company has a share of 60 per cent.

> In its healthcare division the company is working at new product launches which are being planned in the coming years and registration and development work is progressing as per schedule. Export growth from the division was impressive with the parent company deciding to source its requirement of the bulk drug mebhydrolin napadisylate from India.

> Chemicals was established as a separate business group in January 1993. Two products which are doing well are polyurethane (used as insulating material for the refrigerator industry, car seats, etc) and engineering thermoplasts (used as mixer tops, washing machines doors, etc). The company has an existing collaboration with Herdillia Chemicals for the manufacture of heat transfer fluids used in synthetic fibre, polymer and petrochemical industries.

> The diagnostics business of Bayer has been acquired by Bayer Diagnostics, formerly known as Miles India for a sum of Rs 3 crore. BDL in which Bayer has a 51 per cent stake makes chemical and immunochemical test systems. It also markets all diagnostics products of Bayer AG.

Manufacture of synthetic rubber in the country was one area which was being considered by the company but this had to be put aside on account of a shortage of raw materials After an unsuccessful alliance with an Indian company for sourcing raw materials Bayer is exploring the possibility of setting up a joint venture with Reliance Industries or IPCL to manufacture and market synthetic rubber in the country.

Bayer (India) and Bayer AG have decided to enter into a series of co-marketing and co-licensing arrangements with Indian companies in the areas of pharmaceuticals, consumer care, leather chemicals, plastic and polyurcthane. Bayer AG is planning to invest Rs 400 crore over the next four years in the country.

The company has been according high priority to scientific waste management and environment protection. In 1981 it set up the country's tower biology plant to treat liquid waste in a biological way. Later in 1987, to complement the plant it set up a rotary kiln with a capacity of 6 tpd to convert all kinds of waste into renewable energy sources, for use by the company in its various manufacturing processes. According to company reports, tower biology and incinerator were functioning optimally. Bayer and Hoechst are merging their textile dyeing activities by the formation of a joint venture called Dystar textilfarben GmbH.

## **Indian Power Policy, Enron and the BoP**

Kannan Srinivasan

The Enron deal has given investors an unrealistic expectation of the returns they can receive under the government's power policy. Glimpses provided by documents of how the government decided on Enron show it to have been fully aware of the damage this decision would cause. The Amended Power Purchase Agreement negotiated by the committee appointed by the Shiv Sena-BJP government is even worse for the interests of Maharashtra than the Congress original of 1994. The balance of payments consequences of fuel imports for naphtha and fuel oil-based power plants will be ruinous.

THERE is considerable uncertainty as to what exactly the government has specified will be the returns for the new fast track power projects It has been generally presumed that a return on equity of 31 per cent would be provided at a plant load factor (PLF) of 90 per cent. This is because the government notification says that this would amount to a return on equity of 16 per cent at a plant load factor of 68 5 per cent - 6 000 hours/kW/year Forevery I percent increase of PLI an additional incentive of 0.7 per cent of the return on equity (ROE) would be paid at has been taken to mean that this increases by 0.7 per cent of the total equity x 21 5 = 15 05 per cent which added to 16 per cent produces 31 05 per cent

But the actual text of the Gazette of India notification - Part II Section 3 Sub-section 2 of January 19 1994 - states that For generation of above 6 000 hours/kW/year the additional incentive payable shall not exceed 0.7 per cent of return on equity for each percentage point increase of Plant I oad Factor above the normative level of 6 000 hours/kW/year That means not 0.7 per cent of the equity but 0.7 per cent of the return on equity -0 7 per cent of 16 per cent - which is substantially less. This could mean that Enron's Dabhol Power Company investment and all the new fast track projects could earn returns substantially lower than they have projected

#### DISTORTION?

Thereafter a table is furnished comparing the 'Notification Tariff' with the 'DPC Tariff' and claiming that the DPC tariff would be much cheaper Annexure 1 to this letter specifies the 'Additional Incentive Charges' at "0 7 per cent return on equity for each 1 per cent availability over 68 5 per cent, 1 e, 15 05 per cent (for a guaranteed 90 per cent availability)" Note that while the notification SO 36(E) has specified "0 7 per

cent of return on equity" this says '0.7 per cent return on equity—and therefore arrives at 15.05 per cent over and above the 16 per cent return. Could this perhaps be a perversion of the original intent?

Moreover the text of the notification speaks of costs in relation to the generating unit. Not all ancillaries of any supposed investment by Enron or any international investor in Indian power. This would mean that all appurtenant construction — such as the schools airport jetty port any other such works and general social uplift in which Enronis supposedly investing—cannot avail of these returns.

Notification SO 251 (E) of the Department of Power issued on March 31 1992 specifies what the two pirt tariff for the sale of electricity from thermal power generating stations (including gas based stations) should comprise This includes the recovery of annual fixed charges consisting of interest on loan capital \*depreciation operation and maintenance expenses (excluding fuel) taxes on income reckoned as expenses return on equity and interest on working capital at a normative level of generation and energy (variable) charges covering fuel cost recoverable for each unit (kilowatt hours) of energy supplied. This is based on the norms of operation - which include the station heat rate and the plant load factor which are both specified for open cycle and combined cycle gas based stations as well as for coal based stations

What is important is that this entire structure of tailfs — which provides for recovery of costs incurred — is specific to the actual power station itself. It is not meant to provide for the recovery of various ancillary investments. The term that is used throughout is either station or unit or project, as in the date of commercial operation of individual units shall be reckoned as follows, or 'in respect of infirm power, i e sale of electricity prior to commercial

operation of the unit" Clearly the purpose is to reimburse the actual expenditure on the power plant alone – not pay for incidental expenditure

The notification makes the distinction of speaking of the Generating Company where that applies – as distinct from the particular unit or project which can avail of full recovery for its fixed and variable charges and maintenance expenses. Clearly all the expenses of the generating company – such as whatever Dabhol Power Company or its parent. Firon may have spent educating Indians. cannot be reimbursed.

This is why it provides such generous terms to ensure that there is full recovery of these investments. The actual capital expenditure incurred on completion of the project shall be the criterion for the fixation of tariff. Where the actual expenditure exceeds the approved project cost the excesses as approved by the Authority shall be deemed to be the actual capital expenditure for the purpose of determining the tariff.

#### HOW ENRON DI AI WAS DON'T

Secret government documents show that officials were aware of the basic problems in the agreements they concluded with Enron's Indian business. Dabhol Power Company (QPC) They knew there were difficulties associated with the submission of a dispute between the Maharashtra State Electricity Board (MSFB) and DPC both Indian companies to an overseas arbitration and with the government's provision of a sovereign guarantee for this project.

They knew the cost of power they claimed for DPC was false for it did not take into account the depreciation of the Indian rupee or the increase in the price of fuel. The escalation in the tariff makes DPC power very expensive and will raise prices for all consumers in Maharashtra.

It was clear at the outset that DPC would demand very major outflows of foreign exchange and that the company would earn windfall profits out of line withinfrastructure projects in India or elsewhere in the world. Other power suppliers who hoped to piggyback on the precedents created by this project may have to wait indefinitely for their clearances. Not a single power purchase agreement has been cleated by the Central Electricity Authority under the new power policy announced in 1991.

The Foreign Investment Promotion Board (FIPB) presided over by A N Varma then principal sccretary to the prine minister met to discuss the Enron proposal on October 10 1992 Rebecca Mark chief executive of Enron Power Development Corporation

Barclays Bank and Adrian Montagu of Linklaters and Paines made the company's presentation. Cabinet secretary S Rajgopal, power secretary R Vasudevan, secretary, department of economic affairs, Montek Singh Ahluwalia, and additional secretary in the cabinet secretariat V K Shunglu, were among government officials present, but no government law officer or advisor. "The Principal Secretary to the Prime Minister... clarified that in any case there would be no guarantees for the loans being raised from other financial institutions. Enron... asked whether the government of India would be prepared to back up the guarantee of the state government in case the financial institutions insist upon it. Mr Varma firmly rejected the proposal and stated that the government of India's guarantee in such a case is not possible... the question of central government giving further guarantee would raise issues of a constitutional nature... the question of return on the equity was discussed. The cabinet secretary pointed out that this payment will not be in dollars and Enron must take the risk of payment in rupees and then getting it converted in dollar at the then prevailing rate. No government guarantee on the payment of equity could be given.'

#### GOVERNMENT GUARANTEES MSEB AND EXCHANGE

In fact, despite this categorical statement the government of Maharashtra guaranteed MSEB's payment to DPC. The government of India provided a counter guarantee. Two things were subsequently assured to DPC. First, that MSEB would make these payments. Secondly, and more importantly, that this equity would be remitted to Enron and other foreign shareholders by DPC in India. So under the latter, both the payment of the equity and the availability of foreign exchange were assured.

Yet the Constitution of India specifically makes provision for government guarantees to overseas parties for loans. But it does not envisage the government guaranteeing the remittance of equity. As a consequence of the government's volte-face, at a meeting in the room of union government power secretary R Vasudevan on November 8, 1993 these issues were turther discussed. There was general awareness about the preferential treatment being given to Enron - as against that provided to Indian firms. "3. Ministry of finance representative wanted to know whether this sort of guarantee has been given to our CPSUs like NTPC." It also became clear that this was not the guarantee of a loan, but the guarantee of exchange availability for a remittance by an Indian company to its overseas promoter - which has not been so far provided to any other company. "They also wanted to know the extent of the amount

to be guiffanteed - whether it will be limited to the amount of loan or the entire payment to be made by MSEB as appears to be the case." In the same meeting, finance ministry officials also questioned the guarantee of the repatriation of the return on equity: "Finance also sought clarification on the second part of the guarantee relating to... guarantee of foreign exchange availability and repatriation... the promoters as per lender's requirement would be seeking a formal guarantee from GOI regarding foreign exchange in order to meet their foreign currency liabilities."

#### LOBBYING THE ELECTRICITY AUTHORITY

The Central Electricity Authority (CEA) is the public authority in India charged with evaluating power projects - on the basis of the demand for them, the appropriateness of the technology, and the scheme of returns assured to any power company. At every other forum, charm, obfuscation and lobbying prevailed. But the CEA deals with technical issues - where Enron failed to provide satisfaction. As Rebecca P Mark, chairman of Enron Development Corporation, demonstrates in this fax of August 26, 1993 to the then chief minister Sharad Pawar of Maharashtra where this project is located, this firm believes that lobbying - not honest presentation of fact - is what works in India. "A key issue is clearance by CEA. Our people, together with MSEB, have met extensively with CEA this week to answer their questions about the project. The remaining concern seems to reside with Mr Beg, Member Planning for Thermal Projects. He continues to hold up project approval based upon the question of demand for power in Maharashtra. No one from the ministry of power in Delhi has given direction to Mr Beg to move forward on this issue."

The CEA wrote on September 20, 1993 that: "in order to enable the firm to seek and obtain financial assistance, 'in principle' clearance is being communicated to M/s ENRON". This was provided despite serious reservations expressed by the CEA in this very letter: The power from the project may not be fully absorbed in the Maharashtra system. Hence, agreements for purchase of surplus power by other interested states are to be finalised by government of Maharashtra/MSEB who had entered into MOU with M/s ENRON. The studies carried out by CEA indicate that the project is not the least cost option. Tariff calculations are under preparation in CEA".

The CEA only provided Enron's project a conditional clearance on the basis of the MSEB averment that the Enron tariff would fit within the guidelines announced by the government: "However, MSEB has intimated

that the tariff offered by M/s Enron is lower than that calculated on the basis of two part tariff notified by government of India. With this background Dabol [sic] TPS is found to be acceptable 'in principle'."

Enron's DPC investment in India seemed to show the way for foreign and domestic investors in power. Yet in their desire to carve out an exception to suit this company, government officials have ensured that no policy can be framed for the industry as a whole.

Now the MSEB in its letter of September 30, 1994 to the energy secretary of the government of Maharashtra says: "This is to state that Maharashtra State Electricity Board had already examined the tariff structure of the Dabhol Power Company and accordingly intimated the Central Electricity Authority vide MSEB's letter # GH/ND/ARJ/ENRON/252 dated September 17, 1993 (copy enclosed for reference) that the tariff offered by M/s Enron is lower than that calculated on the basis of two part tariff notified by Government of India."

#### INDIAN PARTIES, FOREIGN LAW

"4. Shri R N Poddar of law ministry... mentioned that the Indemnity Clause is too wide-ranging and needs to be deleted. On the applicability of English Law, the general view was that since it is an agreement between Indian parties, the governing law should be Indian Law."

In reply to questions raised by the finance secretary and the secretary (exp), it was clarified that "all payments under the PPA are proposed to be covered under the counter guarantee for the entire term of the validity of the PPA. Therefore, the guarantee is not limited only to the amount and period of loan".

A Confidential Note No 740/06/C/269/94-ES dated July 15, 1994 written by Dinkar Khullar, director in the prime minister's office, minutes that: "Principal secretary took a meeting at 4.00 PM on Tuesday, July 12, 1994, to discuss the counter guarantee Agreement to be signed for the Dabhol Power Project. Finance secretary, power secretary, law secretary, special secretary, power and chief secretary. Maharashtra were among those present.

"I. Arbitration Clause: M/s Enron had agreed to Indian Law prevailing as the substantive law for the Agreement. However, for Arbitration they wished to have British Law (but there is no British Law, only English and Scottish Law) with the venue being London. It was decided that GOI should retain conciliation as the first step and go along with the Maharashtra government formulation on arbitration while exploring the possibility of Singapore as a venue instead of London."

A government note of February 1995, discusses what was sought to be achieved in modifying the power purchase agreement: "the arbitration clause has been updated to take account of the Supreme Court ruling in the case of Singer vs NTPC... an agreement to arbitrate is to be governed by a law other than Indian law if the arbitration is to be an international arbitration for the purposes of the Convention and the Act, although the law governing the contract itself may remain as Indian law... the arbitration award would be readily enforceable in India without the risk of a general review of the ments of the case by the Indian courts and the delays consequent upon such a review."

Before this amendment what would have happened was that the award by English arbitrators would not have been treated as a foreign award under the terms of the Act — and therefore could not be enforced in India. So the agreement of December 8, 1993 was amended as recently as on February 2, 1995 to specify that though the law of the agreement could be Indian, the arbitration would be under English law. It would therefore be treated as a foreign award in India and can in this respect be enforced.

N Ramji, joint secretary, department of power, government of India, observed at one early meeting that: "He made it clear that the government of India would not be in a position to extend any guarantee for these loans. He then directed deputy secretary (Power) Mr Brar to give his observations. These were as follows: (1) The total cash outflow of foreign exchange would be over 1.4 billion dollars. (2) The loan is being repaid in 10 years and thereafter the capacity charge needs to come down. (3) As per his calculations, the ROE was 50 per cent."

#### TARIFF UNDERSTATED

Both the government of Maharashtra and Enron claimed that the tariff payable by the company will be Rs 2.4/kwH. Yet it has long been clear that this would only be true under completely unrealistic projections of the value of the rupee in relation to the dollar; and the price of the imported feed stock, be it naphtha or natural gas. Moreover, this would only be true at the very outset since there is an automatic escalation of price built into the tariff. The MSEB letter to UK Mukhopadhyay, secretary (energy), government of Maharashtra, of July 8, 1993 shows full awareness of the fact that the tariff would escalate dramatically.

Its first scenario assumes Rs 41.2/\$ in 1998, rising to Rs 45.2 in 2010. It further assumes the escalation of capacity charge at 4 per cent per annum, of oil price cif at \$ 4.51/MBTU in 1996, and gas price cif at \$ 3.8/MBTU in 1998 and escalation on oil and

gas price at 5.5 per cent per annum. Under these circumstances, the tariff would work out to Rs 3.22 in 1998 rising to Rs 5.52 in 2010. The second scenario projects an exchange rate of Rs 50.5/\$ in 1998 and Rs 113.71/\$ in 2010. It therefore projects a tariff rising from Rs 3.95/kwH in 1998 to Rs 13.89 in 2010. The third scenario projects the rupee at Rs 41.2/\$ in 1998 and Rs 45.2 in 2010. Consequently, it projects the tariff rising from Rs 3.03 to Rs 5.21. The fourth scenario assumes Rs 41.2/\$ in 1998 to Rs 45.2 in 2010. As a consequence it projects Rs 2.77/kwH in 1998 and Rs 4.74 in 2010. The fifth scenario assumes Rs 41.2/\$ in 1998 and Rs 45.2 in 2010. It therefore projects Rs 3.3/kwH in 1998 rising to Rs 5.64/kwH in 2010. The last scenario assumes Rs 50.5 as the exchange rate for the US\$ in 1998 and Rs 113.71 in 2010. It therefore, projects a tariff of Rs 4.04/kwH in 1998 rising to Rs 14.19/kwH in 2010.

The fact that the MSEB, the government of India and the government of Maharashtra considered this range of options shows clearly that they realised the truly high cost of Enron's power – and then went along with it.

The earlier suit of the state of Maharashtra filed against Enron drawn up by Nitin Pradhan and Prashant Bhushan and settled by senior counsel F S Nariman, said: "It has now come out that the whole object of the First Defendant was to gain maximum advantage to itself by the said Project at the cost of the Indian public. It was inter alia decided by the said Enron to divest 20 per cent to 30 per cent equity holding in First Defendant to one New Orleans based company called Enlergy Court at a high premium straightaway which would result in the said Enron making a substantial profit."

Yet, a subsequent amendment of the original circular of the ministry of power, SO 251 (E) dated March 30, 1992, was made on January 13, 1995. That amendment stated that: "premium raised by the Generating Company while issuing share capital and investment of internal resources created out of free reserve of existing company, if any, for the funding of the project, shall also be reckoned as paid up capital for the purpose of computing the return on equity, provided such premium amount and internal resources are actually utilised for meeting the capital expenditure of the power generation project and forms part of the approved financial package as set out in the techno-economic clearance accorded by the Authority." Clearly that would not be the intention of Enron should it have farmed out this equity - since the nature of the agreement is that all costs are covered and returns assured in the tariff, including extraordinary profits.

#### AMENDED ITA

The amended power purchase agreement (PPA) which the MSEB has just concluded with Enron Development Corporation's Dabhol Power Company raises interesting

The original PPA provided that DPC would be paid by the capacity made available to the Board – whether or not that power was consumed. But the norm has been payment for the plant load factor (PLF) – for the prover actually generated. A fundamental stror had been made in negotiating an agreement with DPC for a baseload plant. Since it would be fuelled by naphtha and eventually by imported natural gas, DPC would be the most expensive supplier of power in this state to the grid. All other depreciated plants based on either hydroelectric power or coal would sell electricity at far lower prices.

DPC should instead have been a peaking power station which MSEB could turn to

during periods of high demand, such as the daytime during the week when it would need to purchase power from every available source. At night and periods when factories and offices would be closed and even domestic consumption would fall sharply, the State Electricity Board should rationally rely upon cheaper providers of power - 'baseload demand'. Only at peak times when power would be necessary at any price - since the alternative would be to not supply consumers electricity - should the Board buy power from an expensive peak load station.

MSEB committed itself to paying for the mere availability of 625 MW - 90 per cent of DPC's available capacity - even if did not consume that power. So a major distortion creeps into the entire administration of the grid. MSEB must first use DPC in preference to cheaper suppliers of electricity. So the average cost of MSEB power will rise dramatically. This is passed on to the ultimate consumers.

The new Shiv Sena-BJP state government came to office and repudiated that PPA. But it subsequently negotiated an amended power purchase agreement. Three significant changes were made First, it kept intact the original commitment for the purchase of 625MW baseload power from Phase I, at the original tariff. Second, DPC agreed to supply an additional 70MW of power as part of the baseload capacity of the plant. Third, it committed itself to a 'Phase II' of this project, permitting DPC to set up a vastly expanded capacity and committing itself to the purchase of that power on a backloaded dollar denominated tariff expressed in 'real rupees' and 'nominal rupees' similar to the one signed by the earlier government. Only once the new plant was set up would the new tariff - an average of Phase I and Phase II tariffs - come into effect.

#### WHAT SHOULD HAVE BEEN DONE?

A lower price for power should have been negotiated for the first phase of the plant. Phase I should have been renegotiated as a peaking power station. And a significantly lower price should have been negotiated for Phase II. No agreement had yet been reached on that phase. Phase II should have been renegotiated as a peaking power station. The skifting of 70MW of capacity in the first phase of the project from the peakload to the baseload has simply increased the high cost baseload burden on the MSEB. This is by no means free power. The cost of this 70MW is simply passed through in the tariff.

DPC will not be required to make major investments to modify the plant. An engineer involved with these negotiations points out that an interesting amendment to the PPA may permit it to increase capacity at virtually

no capital investment - but lower efficiency and therefore higher operating cost - which will have to be borne by MSEB not DPC.

MSEB will now have to make a, higher net payment, although at a lower unit rate. Under Schedule 7, 'Capacity Test Procedures', Section 2, the original definition of 'base load' was "the operation of the Frame 9FA combustion turbines at rated exhaust temperature on the vendor's exhaust gas temperature curve for the given inlet air temperature." This has been amended in the new agreement to be defined as "the operation of the Frame 9FA combustion turbines at rated exhaust temperature on the vendor's exhaust gas temperature curve for the given inlet air temperature plus, after Entry into Commercial Service of Phase II, duct firing of the heat recovery steam generators' (emphasis added).

The original design for Phase I was 209FA (signifying two separate 9FA gas turbines and one steam turbine totalling 635MW for baseload) and 1 FR#6 gas turbine with duct firing providing 70MW for peaking. For Phase II, two additional similar blocks of 209FA of 635MW each totalling 1270 each were envisaged for baseload; and an additional 70MW of peaking power through duct firing.

Under the revision, the same expert points out, DPC will provide for Phase-I an uprated version of 9FA gas turbines to provide a capacity of 670MW instead of 635MW (though actual capacity may be 679MW) from the blocks of 209FA; and two more similar blocks for Phase-II, resulting in 670MW+670MW+670MW = 2010+105 (35+35+35 from duct firing which has been shifted from peak load to base) = 2115MW (ref: Schedule, Annexure 1.1).

The actual capacity can be 679x3=2037+105=2142MW. DPC will add 8MW of duct firing to provide 2150MW. As a consequence, for a limited investment fully recovered from the tariff – and higher operating costs because of the shift of some of the capacities from peak load to base load – DPC is able to show additional capacity.

#### CAPITAL COST NOT FIXED

Because the capital cost has not been fixed – as it is in the case of the other negotiated independent power producers (IPP) – there is no achievement in an additional amount of power production for the same project. An additional 70MW in the case of one of the IPPs would be a significant bonus to the SEB because there would be no increase in the capital cost – and yet would be an increase in the capacity. No additional capital costs are recoverable by the IPP from the SEB; only variable costs such as additional fuel required. But in DPC's case the capital cost has not been fixed and therefore, both the

fixed capital cost, and all variable costs are simply passed through in the tariff payable by the SEB.

The Rupee Debt Service Charges were brought down; so the original definition in the agreement of the rupee capital recovery (RCR) from the date of entry into commercial service of Phase I until the end of the year of entry into commercial service of Phase I was modified. The original formula read: RCRecs = RDS1/ecs/(6,25,000 \* n) where 'n' is the inclusive number of hours between the date of entry into commercial service of Phase I and the last day of the year of entry into commercial service of Phase I.

This equation was modified by increasing the denominator and bringing down therefore the rupee capital recovery value as a component of the tariff. The amended equation reads: RCRecs = RDS1/ecs/(6,70,000 \* n). Yet this marginal reduction achieved in the renegotiation in the Rupee Debt Service charges may well be offset by the increase in revenues to DPC because of a significantly increased volume in sale of power.

#### 'ENERGY PAYMENTS'

But a reduction has been negotiated in various fees payable to DPC. Schedule 10 of the power purchase agreement is 'Energy Payments'. This deals with calculations of fuel price, delivered energy payments, take or pay adjustments, O and M payments. Part IV of this deals with fees payable to DPC by MSEB: testing fees and special operation fee, fuel operations fee and commissioning fuel fee. Now these have all been reduced. The amended contract says: "each of the fees set out above are 1997 prices and shall be subject to indexation in each year thereafter by reference to the following formula". This formula it sets out, so that these fees keep increasing as time goes out. Under Testing Fee and Capital Operations Fees is said: "the following fees shall be payable by MSEB and included in the Energy Payments in respect of the month in which the relevant test or operations is carried out." The Capacity Test amounted to \$ 50,000. Now this has been brought down to \$ 47,500.

"Hot Starts required because of an event or circumstance of Political Force Majeure or reasons attributable to MSEB including Despatch Instructions" have been lowered. The new renegotiated fee is stated in brackets:

| Fuel/Generating Unit | Natural Gas | Distillate |  |  |
|----------------------|-------------|------------|--|--|
| Frame 9FA            |             |            |  |  |
| Gas Turbine          | \$ 9,990    | \$ 10,429  |  |  |
|                      | (9,490)     | (9,907)    |  |  |
| Steam Turbine        | \$ 4,956    | \$ 5,015   |  |  |
|                      | (4,708)     | (4,764)    |  |  |
| Frame 6 Gas Turbine  | : Zero      | Zero       |  |  |

Likewise, "Cold Starts required because of an event or circumstance of Political Force Majeure or reasons attributable to MSEB including Despatch Instructions" have been lowered (the new renegotiated fee is stated in brackets):

| Fuel/ Generating<br>Unit | Natural Gas | Distillate |  |  |
|--------------------------|-------------|------------|--|--|
| Frame 9FA Gas            |             |            |  |  |
| Turbine                  | \$ 14,261   | \$ 15,307  |  |  |
|                          | (13,548)    | (14,541)   |  |  |
| Steam Turbine            | \$ 11,629   | \$ 12,126  |  |  |
|                          | (11,047)    | (11,519)   |  |  |
| Frame 6 Gas Turbine      | Zero        | Zero       |  |  |

The basic question is whether these fees should have been concocted as an item for special payment; and charged to the tariff in the first place? The negotiating team must justify their very validity.

#### COMPETITIVE BIDDING

It was well known that no competitive process had been instituted for Phase I of DPC for the procurement of plant and equipment. The Re-negotiation Committee failed to ensure competitive tendering for Phase I of the project; but announced that competitive tendering would prevail in Phase II. Where was the 're-negotiation' in this? Yet what seemed a very modest achievement turns out not even to be so. The Agreement says: "The arrangements for acquisition of Major Equipment to be used in the construction of Phase II shall be made on the basis of a competitive tendering process..."

And what is this process? "...DPC and MSEB shall jointly determine the identity of the successful bidder as follows. DPC shall make a provisional determination of the successful bidder and shall notify MSEB in writing of the identity of such bidder, together with the basis on which the determination was made and any relevant supporting documentation. If MSEB has not raised any objection to such determination, together with its reasons for such objections, within eight business days of receipt of DPC's provisional determination, DPC be entitled to serve a further notice on MSEB requiring it to concur in such determination. If MSEB fails to raise an objection to the determination, together with reasons as mentioned above, within two further business days from receipt of such further notice, the successful bidder determined by DPC shall be deemed to have been jointly determined."

Clearly MSEB has only a right to *object*. But DPC has effective control of the process of evaluation.

A power producer may have private arrangements with suppliers of equipment and machinery to ensure they are awarded contracts for its projects which are simply an element of the tariff.

The solution may be to negotiate the capital cost at the outset; and to stipulate competitive bidding for contracts. The apprehension was especially acute in the case of DPC. Enron has made the contractors Bechtel and General Electric significant equity holders. This ensures that they have a stake and are in a position to lobby for the most attractive terms to themselves. The Renegotiating Committee set itself the task of ensuring that goods and services would be locally sourced. But DPC has not been compelled to source locally. Nor is there a significant penalty to compel it to do so. Instead there is a mere recommendation; and a bonus to DPC should it do so. This may not compare with the extraneous advantages to DPC shareholders and the promoters in their separate capacity of awarding the plant and equipment contracts to themselves.

The revised clause reads: "6.1(d) DPC shall use all reasonable endeavours to source in India consumables and other goods and services required for the operation and maintenance of the Power Station with a target of sourcing 30 per cent in value of such goods and services in India by the third anniversary of Entry into Commercial Service of Phase I and increasing such percentage by 10 per cent per year thereafter up to a maximum of 80 per cent. Upon the third anniversary of Entry into Commercial Service of Phase I and at two-yearly intervals thereafter the parties shall carry out a joint review of the result of such endeavours. If and to the extent that, on the basis of such review, the parties determine that DPC has been able to increase the ratio of India to foreign-sourced goods and services, (i) in the case of goods and services for which DPC is reimbursed by way of the Fixed O and M Charges referred to in Schedule 9, above the ratio of the Rupee Fixed O and M Charges to the Real Rupee Fixed O and M Charges, or (ii)in the case of goods and services for which DPC is reimbursed by way of the Variable O and M Payment referred to in Schedule 10, above the ratio of \$ VOMC to RVOMC there shall be a fair and reasonable adjustment to the relevant charge to reflect such increased ratio to be agreed between the parties and in default of agreement determined by the Expert." No obligation to limit the project cost. Only best efforts.

The government of India's guidelines for independent power projects permit only 1 per cent of project cost as insurance for the first year of commercial operation. Yet according to Schedule 9, part IV of the PPA, the insurance for Phase I is fixed in dollar terms at 1997 prices. But it is subject to US inflation escalation. Insurance will be calculated according to the actual date of

laid down in the guidelines. This dollardenominated premium raises the question of whether DPC intended to insure this project in India or abroad. The Indian Insurance Act proscribes insuring overseas by an Indian company save in case of overseas projects, the import of plant and machinery or marine insurance.

#### BOP CONSEQUENCE OF FUEL IMPORTS

Petroleum demand is set to increase sharply. The draft report of the IX Plan Group on Demand Projections for the Petroleum Sector has estimated that it could go up from 81 million tonnes in 1996-97 to as much as 146 million by 2001. Nearly half this increase will come from oil-based power plants set up under the new policy. Although international oil majors see this as good news, they may not have considered India's ability to pay. Oil imports could well precipitate the next balance of payments crisis – and a sharp decline in the rate of growth.

Petroleum products today account for 20 per cent - \$ 7.3 billion - of India's \$ 36.37 billion of imports. In 1996-97 the oil import bill is expected to reach \$ 9.5 billion, according to the Oil Co-ordination Committee (OCC) statement in a note sent to the finance ministry for its budget exercises. This is expected to rise by 300 per cent over the next five years to \$ 20 billion. By 2001 the value of petroleum imports could even go up to \$ 30 billion if insufficient refining capacity is available and petroleum must be imported not as crude but as products. India's total imports, oil and non-oil, could go up to \$ 80 billion if the present trend is maintained.

The Draft Report of the Oil Co-ordination Committee's Sub Group of the Planning Commission's Demand Projections for the Petroleum Sector has estimated that the demand for petrolcum products will rise in the years from 1996-97 to 2001-02 from 80.88 million to 119.857 million tonnes. On the other hand, this looks far too conservative. A more realistic projection would take into account those power projects which have been proposed and which have already applied to the ministry of petroleum and natural gas for permission to import naphtha. In this upper case (as we shall call it hereafter to distinguish it from the base case) considered but subsequently rejected by the Planning Commission as being too alarming - products have been projected to increase from 83.457 million tonnes, which it is assumed will be consumed in 1996-97, to 146.818 million tonnes in 2001-02. The increases in the demand for naphtha, diesel. fuel oil, motor spirits and liquefied petroleum gas (LPG) are significantly responsible.

projected total volume of imports of petroleum products in 2001-02 and is expected to grow at 5.5 per cent annually from 12.035m tonnes in 1996-97. Naphtha/ natural gas liquids demand is expected to grow at 7.8 per cent annually from 5041 m tonnes this year to 29.890m tonnes in 2001-02 to comprise 20.35 per cent of total petroleum products consumed by volume. Naphtha and fuel oil together comprise a little over 35 per cent by volume of total petroleum products demand. The new power plants have accelerated the consumption of naphtha and fuel oil following the government's decision to encourage generation from hydrocarbon fuels.

India is increasingly dependent on hydrocarbon products, though it has vast reserves of coal.

Power plants will account for 28.973 mn tonnes of naphtha and fuel oil, contributing substantially to the increase. In the case of naphtha, the base case projects 11.207 million tonnes for 2001-02, while the upper case projects 29.890 million tonnes and therefore a much higher growth rate. To give an idea of when this will happen, the upper case projects a sudden jump between 1997-98 and 1998-99, from 9.318 mn tonnes to 17.924 mn tonnes, and an increase to 25.708 mn tonnes in the following year. There is an increase of 18.68 mn tonnes over the base case. Nearly all of that, 17.95 mn tonnes, is accounted for by the impact of the proposed naphtha requirement for new power plants. In fuel oil, the lower case assumes an increase from 12.035 mn tonnes to 15.654 mn tonnes. But the upper case projects that this will go up instead to 21.803 mn tonnes by 2001-02. Again power is the largest component in the upper case of demand for fuel oil -11.023 mn tonnes out of 21.803 mn tonnes or more than half - compared to 5.413 mn tonnes out of 15.654 mn tonnes, about a third, in the lower case.

The higher case takes into account naphtha based projects such as the IPP demand for 6,75,000 tonnes of naphtha annually in Rajasthan, or RPG Dholpur's demand for 1.1 mn tonnes of naphtha, or Alpine's demand for 5,00,000 tonnes at Rajgarh, or Enron Dabhol's requirement of 1 mn tonnes of naphtha, RIL Patalganga's 7,50,000 tonnes or Ensearch's requirement of 4,00,000 tonnes in Kerala. Ib Valley in Orissa will consume 3,00,000 tonnes annually, AEC in Gujarat, 3,10,000 tonnes, Kedia in Jhabua in Madhya Pradesh, 3,80,000 tonnes, STI Guna Thermal Power Station in Madhya Pradesh will require 5.00,000 tonnes annually, Subhash at Khandwa in Madhya Pradesh will require 2,40,000 tonnes, TEC at Bhivpuri in Maharashtra will require 3,00,000 tonnes, Nippon Denro at Pen in Maharashtra will require 3,00,000 tonnes, Kalyani Steel in Pen Maharashtra will require 3,00,000 tonnes, NTPC at Hyderabad in Andhra Pradesh will require 7 50,000 tonnes, Kannur Power in Kerala will require 7,50,000 tonnes, RPG in Kerala will require 9,00,000 tonnes, Kumar Energy in Kerala will require 5,22,000 tonnes, Karnataka State Electricity Board's new project will require 4,20,000 tonnes, Whitefield in Karnataka will require 3,00,000 tonnes Palakkad in Kerala will use 1,200,000 tonnes, and BPL at M'swar in Kerala will require 7 00,000 tonnes (Table 1)

Even the base case assumes that the important naphtha based power projects will be set up. These include the Essar Bhander project in Madhya Pradesh which should account for 4,00 000 tonnes of naphtha annually, NTPC at Kawas in Gujarat which will consume 2,80,000 tonnes, Essar Power in Gujarat which will consume 5,50,000 tonnes, NTPC Gandhar at Gujarat which will consume 2,00 000 tonnes GTEC at Bharuch in Gujarat which will consume 2,00,000 tonnes, DMPC in Tamil Nadu, 4,20,000 tonnes and NTPC at Kayamkulam in Kerala 4,50,000 tonnes

Fuel oil-based power projects include GEB Dhuwaran in Gujarat (7,60 000 tonnes) Tata Power, Maharashtra (1,050 mt) DCW Power, Madhya Pradesh (2 40 000 tonnes) and CRL, Kerala (8.00.000 tonnes) and Aban Lloyd, Kerala (1,75,000 tonnes) UP State Electricity Board at Pratapur (1 60,000 tonnes), UPSEB at Anpara (1 00,000 tonnes) DCW at Kundu in Haryana (1,80 000 tonnes), DCW at Mohingarh in Haryana (1,80,000 tonnes), DCW at Faridabad in Haryana (1,80,000 tonnes), at Jodhpur in Rajasthan (1,80,000 tonnes), in Ambala, Haryana (1,80,000 tonnes), in Gurgaon Haryana (1,80,000 tonnes), in Abu Road in Rajasthan (1,80,000 tonnes), Lupin in Rajasthan (1,50,000 tonnes) Ginni Filaments at Luki in UP (1 60,000 tonnes), Phoenix Overseas in Haiyana (2,40 000 tonnes) RPG in Rajasthan (1,60,000 tonnes) RPG in Hary ana (1,60,000 to nnes) Subhash Projects in UP (2,50,000 tonnes), Global Board in Madhya Pradesh (2,20 000 tonnes), DCW Power in Mandide in Madhya Pradesh (2,50,000 tonnes), SP Power in Madhya Pradesh (2,40,000 tonnes) and GVK at Ratlam in Madhya Pradesh (2,40,000 tonnes)

Kerosene is widely used as a domestic fuel At 12,192m tonnes it accounts for 8 30 per cent by volume (projected) of total petroleum products consumed in 2001 02, growing at 4.7 per cent annually from 10,517 in 1996-97. Yet this fuel of the poor is not expected to be either an high growth product nor will it make such an impact on the balance of payments. The subsidies paid in kerosene distribution have been declining, from Rs 37,730 million 1993. 94 to Rs 37,400 million in 1994. 95. They are expected to be

frozen under the new petroleum policy, as the government attempts to 'target the truly needy' under the public distribution system of ration shops. This is really an exercise in futility. As even government studies bear out, the poor simply pay more for kerosene because they have to and spend less on other essentials. The Planning Commission has noted the trend that 'all POL products are continuously becoming less price elastic more like essential commodities and an item of utmost necessity. With respect to per capital consumption. MS is a more elastic petroleum product followed by HSD and SKO (domestic kerosene). Relative price

elasticity of SKO is seen decreasing continuously from 0 196 in 1984-85 to 0 103 in 1994-95 income elasticity of SKO (loglog estimate of per capita SKO consumption vs its real prices indices and private final consumption) is 1 36 low price elasticity of SKO seems to be due to fact that SKO is being consumed in small quantities by a large number of consumers for whom the product is a necessity. Thus pricing of petroleum products may not remain an effective policy tool for reduction of their net consumption by substitution with other forms of energy or efficient utilisation."

# Indian Institute of Public Administration New Delhi

# ESSAY COMPETITION ON THE OCCASION OF WORLD FOOD SUMMIT 1996

It gives us great pleasure to announce an all-India Essay competition (sponsored by the Ministry of Food, Government of India) on the occasion of the World Food Summit on the following topics

- (1) Food Security India's Quest for Self-Reliance in Food
- (2) Fight Against Hunger
- (3) Good Security in a Borderless World

Original essay on any one of the above topics should be based on personal study/research/experience of the competitors and should be written in English. The entries (of about 5000 to 7000 words and neatly typed in double space on one side of the paper only) should be submitted in triplicate under a **Nom de Plume**. Full name and address of the competitor should be given on a separate sheet and enclosed in a sealed envelope bearing on the outside the **Nom de Plume**. All essays should be sent to Professor Kamal Nayan Kabra, Indian Institute of Public Administration, Indraprashtha Estate. New Delhi-110 002 by registered post so as to reach us by October 4, 1996. The envelope should be marked "ESSAY COMPETITION — WORLD FOOD SUMMIT 1996"

The value of one First Prize is Rs 10,000/-, Two Second Prizes of Rs 5000/- each and Four Third Prizes of Rs 2500/- each. The essay vill be adjudged by a body of judges selected by the IIPA The award of the judges shall be final and no correspondence on this matter will be entertained. The Institute reserves the right not to make any award if none of the essays submitted reaches the necessary standard.

# Bonded Agricultural Labour in India of 1996

# Case of Hallia Block in UP

Kripa Shankar

For the first three decades after independence, the country's rulers refused even to acknowledge the phenomenon of debt-bonded labourers. Then in 1976, after the proclamation of emergency, the government viewed the passing of the Bonded Labour System (Abolition) Act as synonymous with the freeing of all bonded labourers and cancelling of their debts. The brazen hypocrisy of these postures is exposed by a small survey of five villages in Hallia block of Mirzapur district in UP.

HALLIA block in Mirzapur district of UP borders MP in the south and is very sparsely populated. A century back it was thick forest dotted by kol tribe hutments. The kols were the masters of all that they saw and subsisted on forest produce and on cultivation of inferior grains, mainly kodo.

In the post-independence period two dams were constructed in this block but significantly the irrigation water went to other areas which did not have undulating land. In the wake of the construction of two dams a large number of outsiders descended in this area. They found the land good and by paying a pittance to the Lekhpal acquired a good amount of land. Pressure of population also led farmers and others to move to this area where land was plently and could be acquired easily. There being no land records the kols were alienated from their ancestral habitat and land. The forest was also being denuded and later on what remained of it was declared a reserve forest. A sanctuary was also established and thus the access of kols to forest and its produce was severely limited. In due course of time many were forced to work as bonded labourers of the landlords who had acquired large chunks of

The block is far-flung, being one of the largest in UP. A large part of it is without any road and cut off from the rest of the district. The southern part of the block comprising some 30 villages bordering MP is completely cut off and is locally called 'korawal' area possibly because of its inaccessibility.

We had undertaken some voluntary work in this area and it was during our visits that we were told about the prevalence of debt-bondedness among kols in this area in an acute form. It was only because of our contacts with the local tribals that we not only came to know about the phenomenon but utilised their services in collecting the necessary information from the bonded labourers which otherwise would have been

impossible because the presence of an outside investigator would not have been allowed by the powerful landlords who still rule this area almost in the same manner as they used to in the past. In fact they would have chased and assaulted such outside investigators. Even our resident investigators met the labourers after nightfall and a few among them were hesitant to talk lest the landlord might know about it.

We chose five villages, viz, Karaudia, Singhwania, Gaurava, Beogana and Jhagarha as we had local contacts to collect the information. There were in all 29 bonded labourers in these five villages. It may be mentioned that as these villages are located at a distance of 30-35 kms from the block headquarter and 80 kms from the district headquarter with no roads, the government machinery is practically absent. The village Lekhpal is all powerful but he has to obey the landlords. Any programme meant to help the poor is manipulated in their favour. Thus when land distribution of village land known as Gram Samaj land was initiated in the 1970s, the beneficiaries were not the landless kols but outside relatives of these landlords who greased the palm of the Lekhpal and got the village land in their name. As there was a directive to distribute land to kols also, in a few cases such land was shown to have been distributed to them in the official record but nowhere was any possession given to them. The area being very sparsely populated has a vast chunk of Gram Samaj land which can be distributed to all the landless labourers and still much land will be left with the Gram Samaj. The landlords have prevailed upon the Lekhpal not to take any step in this regard. Similarly, there is vast ceiling surplus land in the villages but we were told that the land was actually still under the possession of the landlords. No official has ever visited the area and the landlords have seen to it that the name of any bonded labourer is not included even in the list of proposed beneficiaries for any of the anti-poverty schemes.

On account of the entente cordiale with the local revenue functionary and the village development officer, no bonded labourer has been selected for any assistance under the Integrated Rural Development Programme. We found that the solitary case where one such person had been assisted under IRDP for a pumpset actually was a case where the landlord had acquired the pump in the name of the bonded labourer who was asked to put his thumb impression on the application form.

Under the Jawahar Rozgar Yojana, we were told that nothing had been done in the study area. Even if some work would have been undertaken the bonded labourers could not have gone there to work. We also did not come across any house constructed for the poor under Indira Avas or Nirbal Avas schemes. Although the Hallia block is under the Revamped Public Distribution System under which the card-holder gets food supply at a price lower by Re I per kg than in other blocks, yet we found that no grain was ever supplied through these shops. Occasionally some kerosene and sugar are distributed. During the period of survey a majority of bonded labourers availed of kerosene but only one-fourth could get sugar.

One enters into the bonded relationship when some cash is required, say for marriage or shradh (death ceremony), etc, and there is no other alternative to get it save by becoming a bonded labour. Nothing is in black and white. No receipt is demanded or given. The landlord is supposed to note down the amount that he has given. No interest will be charged on the money locally called 'agta' as the man will work in lieu of interest. At that time some foodgrain locally called 'buhi' is given which is not to be repaid. He will be paid wages in kind which traditionally has been '2 paila' if given in shape of paddy and '3 paila' if given in shape of kodo. A paila is a small basket which can contain roughly 0.7 kg of grain. The wages in kind are mostly given in the shape of kodo which is an inferior grain and is a rain-fed crop. Apart from this daily wage, every such bonded labourer is given a 'kolia' which may be about 5 biswa or 0.06 ha of land for his personal cultivation The labourer will operate this land with the plough and bullock of the landlord. If he has no seeds the landlord will advance it on 'sawai' basis, that is, he will take back 25 per cent more after the crop is harvested. Now the landlords use chemical fertilisers in paddy and wheat cultivation and irrigate the field with pumpsets. We found that some bonded labourers had sown wheat and paddy on theri kolia and applied fertilisers. In that case they will have to pay the landlord the cost of irrigation or tertiliser. The entire produce on the kolia will belong to the labourer. The labourer is also given 'rashi' for the harvested produce which is usually one-twentieth of the threshed grain. At the time of harvesting the crop, he is allowed to take a small bundle of the harvested crop each day. After threshing he will take the left over. The spouse who also works is separately paid 1.5 kg per day, ie, the same wage as is given to the male. These workers work for all the 365 days without respite. Their life is one unending monotony.

A system of 'purchase' is also in vogue when a landlord would purchase a bonded labourer by paying the due amount to his old master. He will now be indebted to the new master and his debt will be equivalent to the amount paid by his new master. In our survey we came across one such case.

In the past tradition it used to be a patronclient relationship as the labourer had nowhere to go nor was any change to occur during his life-time. The labourer was treated as part of the tamily in the sense that on every important occasion like marriage, death ceremony or birth ceremony he would partake the same food and some clothing or utensil might also be given to the couple. When such an occasion came in the house of the labourer, the landlord would help him in kind. The landlords also allowed these workers to do the mending of roofings of other persons in the lean summer season which entitled them to higher wages. Despite all the exploitation (sexual exploitation of the womenfolk was common) there was some element of humaneness as the landlords knew that the man was completely dependent on him and could never protest nor go away.

But things have now changed. The landlords are aware that the government has made the bonded labour system illegal and under law all their debt stands cancelled. They also know that by distributing Gram Samaj land, a process of their empowerment has been initiated. IRDP and other antipoverty programmes are all designed towards their upliftment.

Zamındari abolition did not mean any change for the bonded labourers but the developmental process has made some openings even in this backward region for the rural poor. They can migrate to cities and other places Stone quarrying has recently come up in this area where the landless get employment opportunities. Carpet-weaving has also spread to this part generating some employment to the poor. Taking advantage of these opportunities many bonded labourers got themselves freed after repaying the entire debt. When such debt is repaid the landlords charge exorbitant compound rate of interest and inflate the debt so arbitrarily that no bonded labourer is ever in a position to get himself freed. That is why the son had to work as such after the death of the bonded father. Now as someone in the household may migrate or do some other work the

saving is utilised to free the bonded labourer after paying back the amount. In one surveyed village, Beogana, alone we were told that in the past some eight bonded labourers got themselves freed by paying back the exorbitant amount as calculated by the landlords. This was beyond the realm of possibility only a generation back. Now the landlords have developed a hostile attitude towards the bonded labourers for they realise that others may also get themselves freed and as their progeny is getting free education. they cannot make their sons bonded as used to happen in the past. The older bonded labourers testified to this change in attitude and a few recalled with nostalgia the old days when landlords treated them in a more humane way.

Out of 29 bonded labourers, 21 or 72 per cent reported that they were bonded from childhood. Their forefathers had taken some loan and after their death the children were made to work as such. They had little idea as to what their forefathers had taken but invariably they themselves had also borrowed either cash or grain. The average amount that the bonded labourers since childhood had borrowed was around Rs 700 and the amount of grain averaged slightly more than 100 kg per such grain-borrowing labourer. Six or 21 per cent had reported that they had borrowed the amount 10 to 20 years back while the remaining 2 (7 per cent) had borrowed 5 to 10 years back. For all the bonded labourers the average debt was Rs 485 in cash and 32 kgs in terms of grain. This is what they had taken but what the landlords had noted down was not known to anyone. They do not care to ascertain from the landlords as to what they owe for they know that they will not be in a position to repay; so what is the use of asking about it?

Marriage was reported to be the main cause of indebtedness. It accounted for 69 per cent of the cases followed by household consumption (7 per cent). Purchase of bullock for the household and medical expenses accounted for the rest.

In the distant past when this system was formalised it was originally stipulated that at the time of every Jeth Purnima (full moon day in June) the landlord would intimate the labourer the amount that the latter owed and he was free to leave if he paid back the amount along with the interest at the rate of 60 per cent per annum. We were told that in the past the interest rate was 36 per cent but now the landlords calculate it at 60 per cent per innum. For the next year the interest amount would be added to the principal and interest at 60 per cent on the total amount would be charged if the labourer decides to leave. At this high compound rate of interest the question of repaying the entire amount simply did not arise in the past and the labourer resigned himself to his fate.

The fandlords generally provide some space and out up a thatched hut where the family lives. We found that 14 or almost half of them were living in this manner. The kolia, i e, the piece of land that they got, was found to be used intensively. Barley or wheat was grown in rabi and kodo, arhar, etc, in the kharif season. Some seasonal vegetables would also be grown to supplement their cereal diet. The landlords also allowed some of them to work in the summer season for some days. The children also assisted in the work and grazing of cattle of the landlords was looked after by them. In that case the children are either fed by the landlords or some small payment is made.

Supposing that the couple got 4 kgs of grain everyday as daily wages or annually 1.2 quintal and their plot of land yielded 1.5 quintals of cereals at the most, their annual income would, at current prices, come to Rs 1,200 or Rs 100 per month at the most after including the grain that they got in the shape of rashi which is given now only as a token. How they survive is anybody's guess. We had asked them as to what was their staple food and specifically what they had eaten the previous night. Thirteen persons reported that they had taken bread with salt. Three had taken bread or rice with 'kadhi', a gruel not prepared out of gram dal which is the ingredient but turmeric was added to barley flour to give it the shape of 'kadhi'. Six had taken bread with potato or some other vegetable. One had taken bread with buttermilk given by the landlord while another had taken 'bhat' made of kodo. Five had taken bread with arhar dal. It was late June when the enquiry was made and these persons could consume arhar dal only because they had grown the crop in their kolia. Pulses were nearly absent from their diet for the rest of the year. Butter-milk known as 'mattha' is the only milk product which they consume occasionally and that too when it is given by the landlord. Bread stuffed with boiled gram dal on which some oil is spread is the only delicacy on festive occasions or it may be rice boiled in a little milk to which some sugar or jaggery is added.

Woollen clothes were absent in every household. Only eight persons had woollen rugs but these were mostly tattered. None had a quilt. They cover their bodies in winter nights with a 'kathari' made out of torn clothes to make it thick as a pad after stitching. Mats made out of kodo or paddy straw is not only used as bedding but is placed over the body in cold winter nights. This by itself may not be sufficient. Firewood is burnt near the entrance of the hutment or in the middle. People sleep round this fire. They frequently change sides to keep the sides warm. It is half sleep and half waking.

Living such a wretched existence they toil from morn till night from childhood till death. Insulted and humiliated at every step they drag on Tyranny and oppression is not unknown in the countryside. But when it goes beyond endurance, the oppressed leave the village for some unknown destination never to return. This has been the practice since ages. But this option is closed for them for they are indebted and the police will arrest them if they run away. The landlords have an understanding among themselves not to employ any person who has run away. On the other hand he will inform the landlord from where he has run away who will then come along with his men, thrash him

mercilessly and drag him again to his house for torturing From then onwards his life will be hell

For the first three decades since independence the very phenomenon of debt-bonded labourers was practically denied and when, after the proclamation of emergency, Bonded Labour System (Abolition) Act was passed in 1976, the rulers have made their countrymen believe that once the act came into existence, all bonded labourers became instantly free as their debts stood cancelled Could there be greater hypocrisy?

# State Level Scheduled Caste Corporations in India

#### **Promise and Performance**

#### R K Mishra

An assessment of the scheduled caste corporations in the country reveals that in spite of having a wide range of activities to perform, the corporations continue to function as an extended aim of state governments to disburse financial assistance.

THE Scheduled Caste (SC) Corporations are a part of the welfare enterprises set up by the various state governments. These enterprises are the latest breed of state level public enterprises (SLPEs) in the country Though there is no all India act governing the setting up and functioning of these enterprises most of the SC corporations have been established by the state governments on their own initiative Recently the central government has set up an apex level corporation to finance programmes for the welfare of the masses in this category. It is expected that this apex level institution will more or less work in the same way as the apex financial institutions in the area of industrial and agricultural credit, viz the Industrial Development Bank of India (IDBI) and the National Agricultural Bank for Rural Development (NABARD) While we discuss the working of these corporations in detail later, we have to bear in mind the fact that the SCs torm a sizeable component of the Indian population The SCs, STs (scheduled tribes) and BCs (backward classes) all put together constitute about 50 per cent of the population of the country. It is no secret that the economic conditions of the SCs is vulnerable and though the tather of the nation, Mahaima Gandhi, acknowledged this fact way back in the early 1930s in his weekly Haryan, no material transformation has taken place in their lifestyle as the programmes for their uplittment have had a heavy dose of political tint. To provide an economic thrust

to the programme the SC corporations came into being in the 1970s and 1980s. Since these corporations have been in existence for more than a decade it is worthwhile to have an assessment of their performance and find out the extent to which they have fulfilled the expectations.

#### OBJECTIVES AND ACTIVITIES

The broad objectives of the SC corporations are

- 1 To help the SCs to cross the poverty line through a gradual and sustained effort
- 2 To transform the economic structure of the incomes and expenses incurred by the SCs through the entrepreheunal mode
- 3 To work for the social uplitment of the SCs through their educational upsurge and
- 4 To mobilise institutional credit for the socio-economic transformation of the SCs by functioning as catalysts, promoters and guarantors

A review of the above objectives indicates that the first three objectives are a corollary to the fourth one. If the SC corporations execute their role of economic transformation fully, the other three objectives get automatically achieved as a spin-off

The activity portfolio of the SC corporations is not uniform. However a survey of their broad activities points out that major activities are

- 1 To identify prospective borrowers,
- 2 To motivate the so-identified borrowers,

- 3 To undertake gainful activities
- 4 To provide them necessary guidance and supply essential inputs for taking up various viable projects
- 5 To prepare a portfolio of schemes to be kept ready in the project shelf to enable selection of schemes which suit their needs
- 6 To help the SCs to till in the application forms for availing the various benefits and provide assistance to them to supply the necessary details
- 7 Fo co-ordinate the proposals of loans with the banks and pursue the follow-up action for sanction of loans
- 8 To provide margin money for securing institutional credit for bankable schemes,
- 9 To provide interest subsidy to the SC borrowers
- 10 To supervise post-sanctioned operations and guide the SCs to overcome difficulties
- 11 To provide escort services to enable the beneficiaries to get assistance from various development and promotional agencies operating in the districts
- 12 To operate the differential rate of interest scheme in unbanked and non-command areas
- 13 To provide direct finance to the most downtrodden amongst the SCs
- 14 To provide tinancial assistance to the educated unemployed persons and
- 15 To plan, promote and assist in efforts to identify programmes of agricultural development animal husbandry marketing processing supply and storage of agricultural products small scale village and cottage industries trade, business or any other activities which enable the members of the SCs to earn a better living

A review of the portfolio of the activities points out that there are three types of SC corporations in the country. There are SC corporations which have limited their activities only to the financial schemes which can improve the economic prospects of the SCs in the country. These corporations mostly deal with the banks co operative societies government and development/ non development organisations. These corporations bring the beneficiaries and the catalysts together in the task of the welfare of the SCs in the country The Andhra Pradesh SC Co operative Finance Corporation is a case in point. In the second category, we have corporations which believe in the improvement of the economic conditions of the SCs through their interface with the small and large industries, as also through the modernisation of agriculture. The SC corporations in Haryana and Punjab belong to this category. In the third category are the SC corporations which undertake multifarious activities for the economic transformation of the SCs. These activities pertain to their educational and cultural upsurge, their interface with agriculture and industry, and their access to the Indian financial system. The prominent example of the SCs in the third category is the Karnataka SC Corporation. As an exception to these three types of corporations is the case of the Tamil Nadu Adi Dravida Housing Corporation which has concentrated on providing housing units to the SCs in the state believing that this one change will lead to a number of other changes in the chain.

A study of the activity portfolio of the various SC corporations points out that there are some corporations which have a limited mandate and have never attempted to go beyond that. On the other hand, there are some SC corporations which have a large activity portfolio. Such corporations have also gone on adding to their activity portfolio. On the whole, a large number of corporations have not gone beyond the initial mandate specified for them and, to that extent, they have remained away from innovations.

# SOURCES OF FUNDS AND MANAGEMENT STRUCTURE

Corporations mostly get their financial wherewithal from the government agencies and public financial institutions. The share capital comes from the government, and loans are made available by the Life Insurance Corporation of India (LIC), commercial banks, state and central governments, zilla parishads, panchayat samitis and similar financing agencies. These corporations in most of the states have a chairman at the helm, followed by a vice-chairman-cummanaging director/managing director, and an executive director in some cases. The hierarchy at that level ends with the general manager-credit and general manageradministration. At the middle level, there is almost an absence of senior managers. The general managers in most of the cases are assisted by executives holding the designation of managers. The managers below them do not have junior executives. They are supported by office assistants, and in some cases by assistant managers. Almost in all the cases, qualified accounting and finance personnel do not exist and the generalists handle this function. There are no executives handling corporate policy and public relations. These corporations do not co-ordinate well with the similar corporations known as the BC corporations, corporations for handicapped, women development corporations, corporations for minorities, etc. They do not have effective co-ordination even with the district administration. This lack of co-ordination results in higher costs, delays and dissatisfaction to the beneficiaries. The managerial lot represents, by and large, a bunch of non-motivated personnel which

has thwarted innovations, a continuous interaction with the beneficiaries and redesigning of the SC corporations.

#### FINANCIAL PERFORMANCE

A review of the financial performance of these corporations can be undertaken as regards the growth and nature of paid-up capital, loans, fixed assets, total turnover/ business done, operating expenses and profit after taxes.

Paid-up Capital: The paid-up capital in the various SC corporations is marked with the general trend of increase at the rate of 10 per cent per annum. Almost all the paidup capital has come from the government. The SC corporations closely following this average are found in Andhra Pradesh, Haryana, Karnataka and Rajasthan. In some states, the paid-up capital of the SC corporations has risen much faster than the average growth of 10 per cent. These states include Himachal Pradesh, Kerala, Maharashtra, Tamil Nadu, Uttar Pradesh and the union territory of Chandigarh. One of the reasons why the SC corporations in some states have had a higher rate of growth in their paid-up capital relates to the philosophy of the ruling party in power. There is no doubt that states like Kerala. Maharashtra, Tamil Nadu and Uttar Pradesh have taken a definite position and interest in ameliorating the economic conditions of the SCs. A closely related factor leading to the growth in the share capital has been the societal concern in these states about the well-being of the SC masses. The case of Chandigarh SC Corporation is somewhat different as the definition of poverty in Punjab differs when compared to many other states in the country. Further, the per capita income of Punjab/the union territory of Chandigarh is also much higher than the average per capita income of the country. There is another interesting trend found in the growth of share capital of the SC corporations. A study of the Tamil Nadu Adi Dravida Corporation reveals that share capital has shot up sharply in such years in which elections have taken place. This is supported by the fact that the rate of growth of share capital followed a diverse pattern in the year immediately following the election. This has been consistently done by all the parties, viz, the AIADMK, the DMK and the Congress(I). Importantly, most states have depended only on the equity support. A question crops up as to why these corporations should not diversify their equity base.

Loans: This was an unexploited resource. Excepting Andhra Pradesh, Haryana and the union territory of Chandigarh, the loan element in the capital structure was insignificant in the case of other states such as Assam, Kerala, Karnataka and Rajasthan. In the case of Andhra Pradesh, the loan

component had a tendency to increase. The debt-equity ratio was 1:2 in the case of the Andhra Pradesh SC Co-operative Finance Corporation. This ratio was 3:1 in the case of the Haryana SC Corporation, 4:1 in the case of the Chandigarh SC Financial and Development Corporation. In the case of the Uttar Pradesh SC Finance and Development Corporation, this ratio was 10:1 in 1991-92. The absence of the loan component, or its insignificant presence, points out the scope for the adding up to the capital investment. One of the reasons of no or low loan component was the heavy predominance of social objectives justifying the nature of the activities of these corporations. However, this should not have undermined the commercial nature of their working as absence of profits. even in the case of enterprises having preponderance of social objectives over the commercial objectives, poses a far greater danger to such corporations since the presence of such a phenomenon does not allow them to freely expand their scope of operation.

Fixed Assets: Most corporations were characterised by absence of any significant stock of fixed assets which shows that they acted more as trading or financial organisations. The ratio of turnover to fixed assets was 100:1 in the case of Andhra Pradesh, 100:2.5 in the case of Assam, 100:1 in the case of Haryana, 100:1 in the case of Karnataka, 100:3 in the case of Kerala (State Development Corporation for SCs and STs), 100:1 in the case of Kerala (State Development Corporation for Christian Converts from SCs and BCs), and 100:3 in the case of Maharashtra. The position of the union territory of Chandigarh, Tamil Nadu and Uttar Pradesh was equally pitiable. Rajasthan was an exception as it had a ratio floating around 100:7. The presence of a negligible level of fixed assets shows that these corporations did not undertake any non-financial activities in a significant way and remained more or less an extended arm of the state government for disbursing funds to the SCs.

Total Turnover: An increasing turnover reflects growth in the overall financial activity. The capital invested in the SC corporations was seldom used well. In Kerala the total turnover was just 6 per cent of the capital investment; in Rajasthan it was 20 per cent, and in Tamil Nadu, it was a mere 1 per cent. Haryana had its turnover in the range of 20 per cent of the total sales. These figures point out clearly a lack of thinking about using the investment effectively. As pointed out earlier, these corporations have objectives but lack strategy, and hence there is no question of realisation of the fact that a greater utilisation of resources can benefit both the society and their managements.

Operating Expenses: The operating expenses should always be less than sales.

However, a study of the functioning of these corporations reveals that this dictum was true only in the case of Rajasthan, Kerala, the union territory of Chandigarh and Uttar Pradesh. The SC corporations in Assam and Haryana (excepting 1985-86) had always incurred operating expenses more than their revenue realisation. The case of Karnataka, Rajasthan and Tamil Nadu was no different, although they had a mixed performance. Since in most of the cases, operating expenses were more than the turnover, the profit after tax, return on investment, and return on equity, were subsequently negative in the case of all the corporations taken as a whole, and in the case of most of the individual SC corporations.

#### MANAGEMENT PROBLEMS

These corporations face a number of management problems. Their top management is weak, politicised and enjoys short tenures. The middle management is not professional and a weak link in the chain. In most cases, rung of middle management executives is absent. The junior management is not recruited from the market and is mostly composed of employees promoted from below, i.e., the clerical cadre. They are not exposed to training and management development programmes.

The performance of these enterprises is measured in terms of targets. This sort of approach has allowed the creation of bogus records and unfair practices. Statistics are cooked up to satisfy the requirements imposed by the policy-makers and administrators. There is a lack of clear authority and responsibility regarding one's role. The financial targets have taken precedence over critical functions such as entrepreneurial development, and monitoring and evaluation. Only the Karnataka SC and ST Development Corporation has been an exception It has set up a number of ancillary industries with the help of both the public and private sector, continuously conducted management development and training programmes for promoting entrepreneurship, set up a medical and engineering college, and provided housing to the clientele. This lack of balance in the distribution of working among the development and non-development tasks has hampered the functioning of these enterprises. Further, the SC corporations, just like other SLPEs, have turned out to be top heavy and have developed a bias in favour of their corporate offices. Their functioning of financial activities has been extremely weak. In many a case, a disjointed, unprofessional group handles finance, personnel, projects and administrative functions. Another problem is the presence of personnel on deputation in these corporations. They do not have a cadre of their own and the SC corporations

have become a berth to provide jobs and deputation facilities to the government employees who are least interested in getting involved in the day-to-day activities of the corporations. The annual accounts and reports of these corporations have remained in arrears and the quality of reporting/ disclosure has been poor. In one corporation, the balance sheet data were for the year 1983-84, whereas the text related to the activities of the corporation for the year 1972-73. An intensive analysis of the data further revealed that the two sides of the balance sheet were forcibly matched. This escaped the attention not only of the internal auditor but also of the commercial auditor and the audit staff of the auditor general of that state. Even the Registrar of Companies/ Company Law Board did not rectify this mistake on their own.

#### CONCLUSION

The functioning of the SC corporations and the data on their financial performance show that though they have been addressing themselves to an important socio-economic problem, the success attained by them has been marginal. They have not done anything tangible, except to work as an extended arm of the respective state governments to disburse financial assistance. Though they have a wide array of activities to perform, they keep themselves limited to disbursement of finance. For instance, most of the SC corporations have concentrated on schemes relating to the sanctioning of margin money, and providing cash assistance to artisans. Some innovative schemes like training for self-employment in motor driving, setting up ancillaries, starting business houses, commencing financial services, etc, have not been touched at all. It is necessary that all the SC corporations in the country come together and annually discuss their attainments and shortfalls. The targets set by them should be reflected not only in financial

terms but also in physical terms. In their review meetings they must examine the extent of professionalisation added to their work content on a year-to-year basis.

Their management structure has been weak. They depend entirely on the equity support from the government and never try to diversify the equity base. The loan component in the capital structure is insignificant, which meant an absence of risk by the managements of these corporations. The use of the capital stock was abysmally low. The operating expenses in most of the cases exceeded their revenue generation levels. Perhaps all this happens due to a weak managerial structure, rampant corruption and heavy politicisation of these corporations. The Karnataka model can turn the corner of these enterprises in both financial and physical terms.

A study completed for the Tenth Finance Commission by the Institute of Public Enterprise (IPE) in 1993, on 'Financial Contribution and Requirements of SLPEs' by R K Mishra et al has projected the financial performance of the SC corporations from 1995-96 to 1999-2000 The projections point out that the present performance will land these corporations in losses, as measured in terms of the return on investment and return on equity. There will be a positive growth in the paid-up capital but loans and advances will grow insignificantly. The prospects of the growth of fixed assets also do not appear to be bright. Except the Rajasthan SC Development Corporation, all other corporations need to go in for restructuring which will require these corporations to think afresh about their sources of finance, capital restructuring, portfolio of activities, pricing and costing policies, management information system and the problem of balancing between the social and economic objectives. If this is not done, these corporations would become cripple, and cease to serve any economic purpose

#### "BACK-VOLUMES OF JOURNALS"

- We offer to supply back-volumes of most of the Indian Periodicals/Journals from our own collection.
- We offer Library Discount + Free cloth binding.
- Subject-wise Catalogues are available on request. Specify your subject
  of interest.
- We also buy personal collection of back-volumes of Journals.

# Statement of the Chairman Mr. Nani A. Palkhivala 60th Annual General Meeting

at the Birla Matushri Sabhagar, 19, Sir Vithaldas Thackersey Marg, Mumbai 400 020, on Wednesday, August 28, 1996, at 3.45 p.m.

In the Diamond Jubilee year of the Associated Cement Companies Limited, it is worth recalling that your Company is professionally managed and has been professionally managed for the best part of the sixty years that it has been in existence. No wonder it has a distinct identity as a nation-builder.

Even in America the Morgans the Rockefellers and the Carnegies have been replaced by professional managers. Today the well established pansion funds increasingly control the supply and allocation of money in developed countries. These funds own in the USA half of the capital of the country's largest businesses. The pension funds are run by a new breed of capitalists—the faceless and anonymous employees who run the pension funds and the investment analysts and portfolio managers. As Peter Drucker observed, we are living in a new era which is both non-socialist and post capitalist.

in the next century, India should endeavour to introduce fruitful egalitarianism in place of sterile socialism. But in that direction we still have a long way to go India still waits for the type of revolutionary turnaround effected by the Labour Party of Britain under John Smith, its great leader and one of the finest gentlemen of our times, who passed away more than a year ago John Smith said that he was relaunching the Labour Party as the party of the citizens and that he intended to chart a future in which the traditional associations of the Party with state ownership, high taxation and trade union power would be buried for ever in a reference to the Labour Party's old attachment to public ownership of the commanding heights of the economy, John Smith said that the new commanding heights were education and training. He categorically said that there would be no commitment to renationalization in the next manifesto of the Labour Party and that the most important priority would be to invest in people, to provide opportunities and skills that were the building blocks for individuals and national prosperity

India purported to become a Socialist Republic by a constitutional amendment in 1976. The nation anxiously waits for the dawn of a new era when our politicians will, like John Smith and the present British Labour leader, Tony Blair, openly dissociate themselves from ideological socialism and expouse social justice which is ethical socialism.

# ement industry

Cement production has registered a growth of about ten per cent during 1995 96. The industry saw capacity expansion of about thirteen per cent over 1994 95 from 77 79 mt to 87 45 mt. Severe power cuts in Karnataka MP and AP led to a major setback in cemerit production in these States. Cement exports at 1.5 mt saw a drop of about

eight per cent from the previous year. This reduction could be attributed to stiff international competition and lack of domestic infrastructural facilities.

The industry continued to suffer on account of infrastructural bottlenecks. Scarcity of railway wagons in MP and Bihar, and restrictions continued to hamper movement of other vital inputs like coal and the transport of cement to consuming centres. Due to shortage of coal availability under the government linkage quota, the cement industry was forced to buy coal from the open market at very high cost.

After the coal prices deregulation announced by the government this year the two major producers. Coal India and Singareni Collieries, announced steep hikes in coal prices adversely affecting the cement industry. The recent hikes are as high as fifty per cent in certain categories.

#### our Company

C ment production and sales recorded a healthy growth this year because of ta rourable factors like industrial growth and the general economic growth. But for the power shortages which restricted production sales would have been higher.

Your Company has been making efforts to improve productivity and modernize the manufacturing processes Besides installation of new capacities substantial investments are being made in setting up captive power plants to reduce our dependence on State Electricity Boards

I am happy to report that despite the power shortages your Company has achieved satisfactory growth in production during the year with the help of captive power plants. The total sales volume at about 9 4 mt helped your Company in retaining its top position in the industry. Your Company has recorded capacity utilization rate of about 93 per cent as against the industry average of 81 per cent.

# 7 ement exports

Though the shortage of railway wagons adversely affected cement exports to Bangladesh your Company's export performance was marginally better than in 1994 95 on account of an increase of 36 per cent in its exports to Nepal and the opening of a new market – Sri Lanka

# Pefractories business

During the year your Company's Refractories Business has grown steadily. It has emerged as the largest supplier of refractories in the country, with total despatches

of over 108,000 tonnes of materials during the year line sales turnover, also has scaled a new height to Rs. 151.4 crore during the year — an increase of 36.75 per cent over the previous year. In order to meet the growing demand for your Company's refractory products, a new plant has been set up at the Butibon industrial complex near Nagpur.

The pre-eminent position of your Company's refractory business has been due to several strategic initiatives undertaken — chiefly in re-energizing and revitalizing this activity. And because of the focused nature of its thrust to make world-class refractory products your Company has succeeded in attracting some of the world's best refractory producers into technology partnerships with ACC. And the quality parameters of the products made match similar world-class products inasmuch as they are also exported to markets in Europe the Far East and the Americas.

# esearch and Consultancy Directorate (RCD)

Your Company's autonomous division RCD has become a highly successful business group. It had chalked out a growth plan of 60 per cent in the year under review More than 60 per cent of the Refractory Business turnover has been achieved through comprehensive R&D work on refractory materials carried out at RCD.

# verseas project

In recognition of your Company's sterling performance the Yanbu Cement Company has awarded to your Company a fresh contract for the operation and maintenance of its new two million tonne per annum plant

## xpansion/Modernization

Having successfully completed the one million tonne per annum clinkering unit at Kymore in May 1995 the modernization and expansion of the cement grinding packing and loading plants at Kymore were completed in March 1996. The cement grinding capacity of Kymore now stands increased to 1.2 million tonnes per annum In addition steps have been taken to instal another 1.2 million tonnes per annum clinkering unit at Kymore Once this new project is completed. Kymore would have a modern energy-efficient clinkering capacity of 2.2 million tonnes per annum. As a further step to increasing cement capacity your management has planned to set up a modern split grinding plant at Gaurigan; in UP to produce the highest quality PPC with flyash being sourced from the NTPC unit at Unchahar

Your Company is making substantial investment in the captive power generating capacities it is envisaged that captive power plants with capacities of 25 mw each at Jamul and Kymore in MP, will be completed by November 1997. With the completion of these projects, the captive power available would be sufficient to meet 80 per cent of your Company's power requirements.

# ngmeering business

Your Company's engineering business which already has a solid base, is beginning to assert itself more significantly. A new division has been set up - under our

subsidiary company ACC Nihon Castings Ltd (ANCL) in collaboration with Nihon Cement Company Japan – which is designed to provide project consultancy and management services to the cement industry in India and also bverseas. The division s first assignment is the setting up of the new unit at Wadi and providing project management services for the new unit at Kymore.

# ew venture

Your Company, together with TELCO, has undertaken a joint venture — Bridgestone ACC India Limited, with Bridgestone Corporation, Japan, a world leader in the tyre business — for manufacturing steel belted radial tyres for passenger cars and light vans. A state-of-the-art two-million capacity plant, using the renowned Bridgestone technology, is being set up at Kheda industrial growth centre near Indore, MP Commercial production is slated to begin from April 1998.

# oncluding remarks

In the changing world scenario India is looking beyond the obvious. It stands on the threshold of an epoch-making era - an era of growth of achievement of rapid progress. Since it took its first steps in August 1947 as a free country, the nation has taken large strides and after liberalization and globalization have taken root. India is rushing ahead to meet the challenges of the twenty first century. And your Company ACC. India is premier cement company, has grown alongside fulfilling its responsibility of building the nation. After over six decades of yeoman service particularly to the cement industry, your Company's focus is fixed firmly on the future. As the nation prepares for quantum development, your Company is gearing up to shoulder a giant responsibility.

I am confident that under the very able and perceptive stewardship of Dr Subrata Ganguly and Mr. T.M.M. Namblar and their team, supported by a loyal and competent workforce, your Company will continue to hold its premier position in the unfolding future

On behalf of the management and on my own behalf I take this opportunity to express my appreciation and gratitude to all members of the ACC family for their contribution and dedication which has helped your Company to march ahead in pursuit of growth and excellence. On the auspicious occasion of your Company's Diamond Jubilee I extend to you and all members of your family my warm felicitations and good wishes.

Mumbai August 6 1996

#### **Building the Nation**

#### Water Crisis in Port Blair

#### Kailash

Large scale, sudden influx of immigrants and unplanned industrial growth have rapidly depleted fresh water sources on the islands in Bay of Bengal.

ISLANDS in the Bay of Bengal are facing shortage of fresh water almost every summer. Despite abundant sea water and more than 3,000 mm rainfall, many islands do not have suitable sites to store fresh water. This is one of the major factors to migrate to other islands which also carry a better prospect for economic activities.

Almost all the islands have an undulating topography with steep slopes at coastal sides. The streams of third to sixth order are found to be of high run-off coefficient and discharge almost entire rain water immediately after the rain is stopped. The upper geological structure is highly porous and the water which percolates into sub-soil layers is brackish and unhygienic.

The availability of water, its demand and supply have always been affected by rapidly growing population in different islands. Till the end of second world war, the population of the territory remained stable. No other than convict community was allowed to settle here. Soon after the end of the Penal Settlement in 1945, the islands experienced large-scale immigration from Indian subcontinent which continued into the 1960s. Perhaps, the most important event in the history of Bay Islands was the beginning of colonisation plan in 1952 under which forests were cleared on a large scale to cultivate land for refugees from east Pakistan and Punjab. Following the widespread influx, there has been a nine-fold increase in the total population of the islands between 1951 to 1991 (31 to 278 thousands) while more than 12-fold growth was perceived in Andamans (19 to 241 thousands).

Rainfall, harvesting and water retaining capacity of soil have been severely affected due to increased pressure on land. In Andamans, there were only 61 villages in 1951. This number increased to 137 in 1961 to 356 in 1991. It is to be noted that all these villages came up after clearing the forest. Increased population pressure led to encroachment and deforestation in connivance with local administration. The estimated area under encroachment till 1986 was more than 3,200 hectares which was later regularised by Island Development Authority (IDA). There were 63 villages in the encroached forest area of Andamans till 1991. Hundreds of encroachment cases are with the forest department awaiting clearance. The forest department generally regularises encroachment as there is no severe objection to this practice. It is reported that some political leaders and big businessmen are indirectly involved in illicit encroachment to acquire land for coconut and arecanut plantation, a prosperous business in the islands.

The continuous shrinking of forest has reduced the surface water availability. The actual rainfall which was 3,365 mm in 1988 has come down to 2,593 mm in 1990. Similarly, the number of rainy days got reduced to 163 in 1990 from 199 in 1988. In fact, the summer of 1990 proved to be the starting point of fresh crisis of domestic water in and around Port Blair. The level of sub-surface water is decreasing gradually. Soil erosion has steepened the slopes leading to quick drainage of rain water into nearby sea. There were several schemes for construction of ponds and reservoirs during colonisation period. A number of low-lying areas were converted into small reservoirs. However, it was found that these reservoirs which flooded in each rainy season went dry in the summer, due to filtering of water through porous sub-layers.

This year, for the fifth time in a row, the Round Basti, Aberdeen, South Point, Atlanta Point and many other areas received water supply for less than 20 minutes. The municipal board supplied water—unhygienic and of low quality—three alternative days in a week between May and July to ensure the adequate supply to other part of the capital. Many households have installed their own stand points. Conditions in slum localities of Dairy Form, Haddo Phoenix Bay, School Line, etc, are miserable as there is, as usual, acute shortage of drinking water. Abdomen problems have become chronic among the people and the water exudes reddish colour during boiling.

Demand for water multiplied due to largescale influx from mainland. During 1951-91, population increased by more than 862 per cent. At present about 85,000 people are residing in the capital with high density of 6,011 persons per sq km. The Dilthaman tank, and later Jawahar Sarovar with storage capacity of 45 million gallons, remained the main sources of water supply for domestic uses till the beginning of 1970s. Scarcity of water was first felt in mid-1960s. Desalination of sea water was considered as an alternative to rain water. Consequently, construction of Dhanikhari Nalla project was undertaken in 1970 which started the water supply in 1973. Its reservoir has a storing capacity of 375 million gallons. It can sustain for 250 dry days at a rate of 1.50 million gallons of water per day.

Decades back, the longest spell of dry summer was or 215 days. Now it has increased to 230-240 days. The main reason is supposed to be the climatic changes due to large-scale deforestation in many parts of the islands. The delayed and scanty rainfall is the direct outcome of human interference in fragile

inland-ocean ecosystem. In 1990, situation aggravated so much that local administration was planning to dispatch mainland officials of Port Blair back to their homes. Generally, rainfall starts in the first week of May but in 1991, it started on July 22 and withdrew as early as second week of September, causing severe shortage of water in the summer of 1992.

At the same time, industrialisation, shipping, health services, defence establishment, hotel industry, etc. have diversified demand on water. At present there are 363 industrial units in Andamans. Out of it 315 units are concentrated in south Andaman, especially in Port Blair. Asia's biggest saw mill is located here. Efforts to collect and store water have been long neglected. The National Commission on Urbanisation (NCU) has recommended 225 lpcd water for capital towns. On the contrary, the supply in many localities of Port Blair is less than 30 lpcd during summer and less than 71 lpcd in other seasons.

Water and power crisis have become in recent years major problems in the development of the islands. It requires long-term perspective planning to contain effectively further influx, deforestation and encroachment and make efforts for the diversification of economic activities like industrialisation and tourism to other islands. Recently, the lieutenant governor took initiative to start the construction of 'Indra Nalla' and 'Gupta Nalla' water supply schemes to supply extra water to the people. But these are not a permanent solution to the problem as these streams are of fourth to sixth order and water level comes down every summer.

As an alternative, sea water can be utilised for drinking and other domestic uses if advance technology to process it, is made available. There are several known methods of desalination. First is the solar stills. This is most suitable for islands with small population. The solar stills consist of a glass chamber in which the sea water is heated by the sur rays and made to boil. The vapours are converted to fresh water after getting condensed. Sea water can be processed through flash distillation. The heated saline water flows through a series of chambers which are maintained at different atmospheric pressures. The water evaporates in each section of the chambers and the vapours get condensed over a bunch of tubes. The distillation of fresh water thus produced at each stage, is gathered either separately or collectively to be used as fresh water.

The third method of desalination is electrodialysis process. This technique employs iron-selective membranes for the desalination of brackish water which is available in plenty in the Andamans. It is more economical up to 5,000 ppm. The fourth method is by reverse osmosis, a widely used desalination technique. Under this process, the micro osmotic membranes reject salts and allow only water to pass through when the sea water is put under high pressure. One lakh litre of fresh water per day can be processed for drinking purpose by this technique.

# **Gendering Justice**

Kalpana Kannabiran Vasanth Kannabiran

What the Rupan Bajaj verdict has accomplished, in an important sense, is the subversion of the patriarchal traditions of the Indian state and a jupture of the boundaries between the political sphere and society, between the home and the world, between the workplace and the street, between classes, forcing us to re-examine our realities and the categories through which we comprehend these realities.

THE recent judgment in the Rupan Deol Bajaj-KPS Gill case is a landmark judgment for more reasons than one. It sentences a national hero to rigorous imprisonment. Further, that the FIR was quashed by the Punjab and Haryana High Court and it needed a Supreme Court order to force the trial in the Chief Judicial Magistrate's court. A Supreme Court order and eight long years. Obviously a judgment that will generate a lot of hysteria all around.

The easily recognisable one is one of feminists gloating and rubbing their hands in glee while they mentally count the number of reputed men they can get sentenced in quick succession. You can almost see the skin scraping off their hands and the heads rolling into baskets at their feet while they grin wickedly, cackling and hooting in unholy glee, muttering curses on their unfortunate class of victims. The other not-so-well recognised or named variety of hysteria is the male variety. It consists of balanced praise of the fact that no one is above the law That no matter how highly placed, the long arm of the law will reach and sentence the offender impartially. Then the hysteria starts. It would be crossing all limits of propriety if a hero of this stature actually has to go to jail. Bajaj should not make statements about working women in general Feminists should not gloat or score brownie points. Self-control is preached. Otherwise no man of reputation is safe. Nothing will remain sacred. The pillars of our very society will crumble, the nation will become a laughing-stock, etc. And that is also in a sense justified.

It is perhaps time to reflect on the trajectory of public discourse on this case especially over the last week. This exercise will force us to re-examine our own assumptions and discomforts on the women's question generally and the implications of this case for our individual private lives. One of the primary reasons for discomfort, in our view, is that this case is somehow too close to the lives of the middle classes, and the signals the verdict sends out are also primarily for that class of people. While all these years it has been possible to espouse the cause of

women who have been raped or abused while at the same time distancing oneself from the cause one was espousing, we have suddenly moved to a situation where a man, a hero at that, is up on trial for something that in mainstream discourse is a joke, frivolous behaviour, certainly not offensive.

For those of us who have been active campaigning on issues of human rights and women's rights, the public discourse on this specific case is an eye-opener. All at once it has become clear to us why we have had so much difficulty securing convictions in rape trials or in being able to initiate punitive. action in cases of sexual harassment across caste and class. The explanation all these years has revolved around a sometimes inactive, mostly biased judiciary and state apparatus that has consistently undermined and subverted women's interests and the interests of marginalised groups. Here is a case where the judiciary has actually taken a stand upholding women's rights, yet the predominant response in the English press is about how the judicial system can afford to be unbrased or neutral in the face of Gil's excellent record as a remarkable public servant. Enough is enough and a simple apology graciously accepted should end the matter once and for all. And speculation on how ugly the feminist response to this verdict will be gloating and hysterical (editorial, The Indian Express. August 7, and Swapan Dasgupta, 'Enter Sexual Harassment. Awaiting the Feminist Inquisition' The Indian Express August 10). And this reaction from an enlightened section of the press-

It might be useful to recapitulate briefly the facts of the case for those who might not know. On July 18, 1988, at an official dinner party hosted by the then home secretary cum-tinancial commissioner of the Punjab, S. L. Kapoor, K. P. S. Gill, the then director general of police, Punjab, was accused of sexually harassing a woman in the presence of other senior officers of the government. The woman who made the allegation was Rupan Deol Bajaj, a senior IAS officer of the Punjab cadre. The very next day after the complaint was made, Rupan Bajaj and her husband B. R. Bajaj, also

a senior IAS officer of the Punjab cadre made a complaint to senior officials in government ibout Gill's conduct. On July 20, two day statter the above incident, Ribeiro put up a note to the then governor, Siddhartha Shankar Ray that action be taken against Gill. In this note, Ribeiro had stated that Gill was in the habit of getting drunk and mispehaving with women. Siddhartha. Shankar Ray then asked Gill to apologise to Bajaj. But clearly, neither the governor nor any of the other senior functionaries in government at that time pressed the matter any further, in large measure because of Gill's outstanding contribution to the elimination of terrorism in the Punjab, especially in Operation Black Thunder. (Further, this note was made confidential and sought to be suppressed in court). Not deterred by the unsympathetic response she pot from the government, Rupan Bajaj went ahead and lodged a police complaint, and a little while later a private complaint. Predictably the Punjab and Haryana Court quashed both the FIR and the private complaint. After battling it out for six years, tinally the Supreme Court of India on October 12, 1995 directed the chief judicial magistrate of Chandigath to instrate proceedings against Gill. This tuling came when Gill was still in service. Easth months after the proceedings were initiated the effet judicial magistrate Darshan Singh announced his verdict. Gill was convicted under Section 354 IPC (our aging of modesty) and Section 509 IPC Juse of force or infimidation or making sexual gestures to insult a woman]. The punishment. Three months regorous imprisonment and a fine of Rs 500 under Section 354, and two months simple imprisonment and a fine of Rs 200 under Section 509, both sentences to run concurrently, which meant that Gill would spend a total of three months in prison, unless he went in appeal. It is worth noting at this point that both sentences are consistent with the seriousness of the offence under the relevant sections

Yet there is a general sense of shock at the severity of the sentence. A national hero to undergo rigorous imprisonment? Things are getting out or hand. Bajaj should learn her place and call it a day. Neither she nor the feminists should gloat over a vicarious victory. The issue at stake here is not Gill's reputation as a national hero whose aberrations must be sympathetically glossed over, or Bajaj's power and privilege that have tuelled her vindictiveness. The question we need to ask ourselves today is, what is the measure used to assess the seriousness of an offence involving violence against women, or the legitimacy of the allegation of violence? Who sets this measure? In Rupan's case this becomes contested terrain because both the accused and the petitioner are functionaries within the same establishment. Public discourse on this issue has so far been totally trapped within individualistic personalised frameworks, where everybody is very deeply affected by the verdict, some deeply disturbed, but nobody is actually able to move out of the specifics of the case ('be fair to Gill'), to the general questions the entire issue raises. Where there has been a concern with the general, the concern is that of the middle and upper class man (exceptions like Tayleen Singh notwithstanding) who identifies himself, in his vulnerability and his temptation, totally with Gill, as opposed to the 'pathological bottom pinchers in public buses', the 'riff raff', the nameless, faceless man on the street. This identification and this opposition essentially has to do with class.

In this article we hope to unpack the assumptions behind the current articulations on the Gill-Bajaj case and examine the implications of this verdict, as also the implications of the responses to the verdict that have come so far. The main purpose behind this exercise is to recapitulate the two-and-a-half decade long debate on the question of women's rights generally and the whole question of sexual harassment.

In addressing the issue of sexual harassment, we are also foregrounding the issue of women's civil and human rights. We are asserting women's right to work, their right to an environment that is free of aggression and violence. Free of sexual harassment. For a long time there was no name to this practice. It was just women talking about dirty old men or drunken lechers. It was the feminist movement that gave it a name. Called it sexual harassment. And by the simple act of naming it, resurrected the violence hidden in the game of eve-teasing. A game that it is assumed men and women equally enjoy. A game where the rules are decided and laid down by men. Be a sport. Smile and show you like it. And so it was until it suddenly became evident that women didn't think so.

It is a recognised reality that women at work can never quite escape being defined as sexual objects. Gender is never absent. Either for their colleagues or others. Sexual access, ranging from small intimacies right through to actual intercourse is often assumed to be a part of the working relationship, whether the woman wants it or not. It was around 1975 when feminist organisations in the US organised speak-outs on sexual harassment at work that a flood of testimonials poured in telling of thousands of women who fled their jobs because of sexual demands and many thousands who lose promotions, raises and other benefits. The stress women suffer due to sexual harassment causes innumerable skin diseases, breathing and circulatory disturbances, chronic cystitis, gastric ulcers and depression.

Characteristically when urban women actually complain of sexual harassment it is the victim rather than the harasser who is seen as the problem. As in rape. Her perception and her sanity is at once questioned and there are hints of paranoia and hysteria One needs, when looking at sexual harassment, to see that it is not just unpleasant drunken or aberrant behaviour, but an act which is in keeping with the way society organises relationships between men and women. Which explains why Bajaj calls it breaking a conspiracy of silence.

It might be useful at this point to understand this debate by extending the framework of duality Elshtain poses between morality and power (J B Elshtain, 'Moral Woman and Immoral Man: A Consideration of the Public-Private Split and its Political Ramifications'. Politics and Society, 4(1974), pp 453-61). This duality is one way of articulating the separation between the private and the public in civil society. The dominant consciousness in a liberal patriarchal system is typified by a contrast between and hierarchisation of the political sphere - the state, i.e., the sphere of power, force and violence, and the society, ie, the private realm the sphere of voluntarism, freedom and spontaneous regulation. This opposition between morality and power counterpoises love and altruism, the natural attributes of womanhood against physical force and aggression, the natural attributes of manliness (the attributes of a national hero), which are seen exemplified in the military force of the state.

There is, however, a further complexity to this duality. In the opposition between and society or the sphere of morality and the political sphere or the sphere of power, morality is essentially passive, where women use or are expected to use "finely tuned, discreet social mechanisms for coping with importunate intrusions on the individual (read female] body" (Swapan Dasgupta, The Indian Express, August 10). The active enforcement of morality, the protection of national honour for instance is a male prerogative and belongs to the realm of the political. It is this active morality that gives the political realm its legitimacy - a legitimacy that is governed by the ends justify the means doctrine. It is also this morality which defines the political as the supreme, before which all other interests are subservient, all other issues irrelevant, and human life totally dispensable, especially the interests, issues and lives that make up the body of society, the private realm.

It is the implications of this duality that spell out for us yet another dimension of the feminist slogan "the personal is the political". It is precisely this bending of the 'social' interest, the subjugation of social morality to the interests of the nation, the political morality that is being articulated in the write-

ups on the Gill-Bajaj case. Take for instance the following statements: "the sentence of three months' rigorous imprisonment ...although well within his discretion and powers under the relevant section of the Indian Penal Code looks somewhat harsh considering that Gill had an outstanding record as a supercop. If today Punjab is rid of militancy which had taken a heavy toll of human lives in the state a great deal of the credit goes to Gill" (editorial, *The Hindu*, August 9).

"It somehow makes the law of the land look grotesquely odd and incongruous that a man who has done signal service to the country by ridding a state of the dread and oppression of terrorism should have to spend five months in jail for a minute's exuberance provoked by the charms of an attractive working woman" (editorial, Deccan Chronicle, August 8).

"KPS Gill's conviction by a Chandigarh court prompts a moral dilemma. India's most celebrated policeman, the man who contributed most in crushing terrorism in Punjah, and one of the country's most authentic living heroes, has been held guilty of using 'criminal force' and "intruding upon the privacy of a woman... There was no political dimension in Rupan Deol Bajaj's charge...It was a plain and simple charge of sexual harassment...Under the circumstances. should Gill's enormous national contribution be allowed to gloss over a personal misdemeanour? Conversely, should Gill's record in Punjab be allowed to be subsumed by a flood of righteous indignation...No Indian who is aware of his role in defeating secessionism in Punjab can be happy at Gill's misfortune...Unfortunately it is not his humiliation alone; the country too feels a little small today." (editorial, The Indian Express, August 7).

Then we have the arguments that foreground Gill's contribution to the nation, and reassert his place as a national hero. An extension of this argument is that any attack on Gill that goes to the extent of h.s imprisonment is a gross violation of the dignity and integrity of the nation and will in fact throw up the Indian nation in poor light in the international context.

While positing a duality between the political sphere and society, between morality (the good of the nation, national honour) and self interest (pressing charges of sexual harassment), and the supremacy of the former over the latter, what the authors in this debate are also doing is identifying morality with patriotism and placing it in opposition to self-interest that is identified with feminism (read anti-patriotism). And this is the core of the problem of separating the personal from the political, or separating realms of conduct. How does one separate Gill the police officer, saviour of Punjab, supercop

national hero, crusher of terrorism, the image of virility and power from the man who uses that virility and power to grab the nearest available part of a woman's anatomy. It does not matter whether it is a breast or a bottom? And what does he expect when he does that? That she should melt into his arms, thrilled that a hero has actually laid his hand upon her. If a woman complains instead, it must be some old enmity. Or the IAS-IPS rivalry. If she tries to file a case, it is scotched. If she persists and the case is tried and against all odds the man is to be punished, then there is a great disturbance. It is against the established order of things. How can a national hero be described in terms that Dasgupta or Tayleen Singh use to describe commuters in the public transport system who exhibit the same behaviour without the power to back it, i e, 'pathological bottom pincher', 'ritf-raff', 'sexual pervert'

This separation of spheres will lead inevitably to the trap of prioritising the larger interests over the smaller interests. And this will perforce spill beyond 'gender concerns' like sexual harassment. The spill-over for us is most evident in the phenomenon of state repression that we are so familiar with and the modalities of 'eliminating terrorism' where the lives of the people are made subservient to the good of the nation, not by the patriotic awakening of the masses but by the use of political (military) force. In this framework, the question of civil liberties and the struggle for civil liberties, like teminism, falls within the realm of selfinterest, of anti-patriotism. The Gill-Rupan Bajaj verdict and the debates surrounding it exemplify this kind of duality. This has to do with the gendering of the state. Do we as Indian women then assume that the Indian state is one that will willingly subsume women's human rights to the larger interests of the nation? That tired and weary soldiers, heroes and policemen have a right to misbehave occasionally and manhandle and abuse women with words and gestures with sexual overtones which must be shrugged off as a joke or suffered in silence.

In an attempt to side-step this juxtaposition of the larger interests versus individual interests in this case and foreground Bajaj's experience of violence, and the fact that sexual harassment did occur. Seema Mustapha argues assuming the validity of the separation of spheres, while asserting that Gill's positive contribution in one sphere cannot detract from his misdemeanours in another (Seema Mustapha, 'There is more to Gill than his public face', The Asian Age. August 10). While this is true and well-taken as an immediate response, the separation is in fact an ideological trap within which it is impossible to transcend the slippage from one to the other, a slippage that is inevitable and determined by the dominant interests.

Invariably, in discussing issues of gender. one focuses on the family without looking at how the state institutionalises gender. It engages in ideological activity on issues of gender ranging from birth control to the sexual division of labour. There is also the fact that person-to-person violence which is sought to be explained away as individual deviance is in fact an enforcement of the social order. That authority or legitimate power links with masculinity as the fulcrum of the power structure in gender relations. And it is the direct threat to this definition of masculinity that is the source of disturbance. The structural fact that there is a global dominance of men over women provides the basis for defining a form of hegemonic masculinity. A hegemonic masculinity as in the image of a national hero which is then constructed in relation to the subordinated masculmities (the terrorists and criminals controlled through violence and force with the ideological justification of maintaining law and order) and women. The connection between hegemonic masculinity and patriarchal violence is close. Feminity on the contrary is constructed around a compliance to the dominance of men or around a resistance to it. And since compliance is central to the pattern of feminity it is organised as an adaptation to power and authority emphasising nurturance and empathy (see

R W Connell, Gender and Power: Society, the Person and Sexual Politics, Polity Press, Cambridge, 1993). Mark, Bajaj should 'graciously' accept a simple apology and let the whole matter drop. (What has in a sense changed the outcome is the fact that Rupan Bajaj is firmly married, in authority, and has the support of her husband. The limitations of this victory are that it would have been inconceivable for a single woman not so firmly embedded within the institution of marriage that is so assiduously supported and protected by the state). The disturbance therefore is one that has to do with the questioning of these hegemonies and the tilting of the axes of power and authority.

To strike at this image of hegemonic masculinity can open the doors to questioning the definitions of heroism and courage, power and privilege and open the floodgates to chaos where the principles of kinder, kirke and kuche are swept out. What women have accomplished through the Rupan Bajaj verdict is, in an important sense the subversion of the patriarchal traditions of the Indian state and a rupture of the boundaries between the political sphere and society, between the home and the world, between the workplace and the street, between classes, forcing us to re-examine our realities and the categories through which we comprehend these realities.

#### Industrial Growth and Stagnation

Rs 275

Edited by

#### Deepak Nayyar

A selection of essays presenting the main strands in the debate on industrialisation in India. The contributors analyse the factors underlying the deceleration in industrial growth from the mid-1960s to the mid-1970s and discuss the conditions and policies for a return to the path of sustained growth. Alternative hypotheses about the macroeconomic determinants of and constraints on industrial growth in India are examined, focusing on the performance of the agricultural sector, intersectoral terms of trade between agriculture and industry, disproportionalities within and between sectors, the level of investment in the economy, the nexus between public and private investment and the relative significance of supply and demand constraints.

# **Growing Regional Income Disparities** in Russia

R G Gidadhubli

Yeltsin's free market economic policies have thrown Russian economy out of gear, resulting in increased unemployment, destitution and crime in the resource-scarce regions of the country.

AS Russia went to polls in June 1996 to elect a new president, Boris Yeltsin staked his claim for a second term. Since a few months before the elections, he has been trying his best to improve his chances by his initiatives concerning domestic and foreign policies -decree on land ownership in March, visit to China in April, summit meeting with Clinton and the G-7 so on. While his popularity rate has slightly improved, albeit still lagging behind his rival communist candidate Gennadi Zyuganov, continued civil war in Chechnya has been a hurdle for Yeltsin. Another stumbling block that Yeltsin faces in his election campaign is his 'contribution' to the polarisation of Russian society into 'new rich' and 'new poor'. The new rich capitalist class of entreprenders, traders, managerial groups who hold packet of shares in privatised industrial units and the mafia, who have become rich overnight by Yeltsin's privatisation and liberalisation programmes will certainly support him in the election. But this is a relatively small section of the society. Yeltsin's policies have impoverished a large section of the society, be it industrial workers, white collar employees, agricultural farm workers, scientific and technical personnel. Thus, there is a vertical division of the society into rich and poor based on income levels reflected through diverse standards of living of the people

There is yet another dimension to the division of the Russian society, and that is regional. In a short span of 2-3 years, a few regions have emerged which can be considered as better off while many have become worse off. This is evident from the recent publication of the ministry of economics of the Russian government. At the end of 1995, Goskomstat (state committee on statistics) released statistical data on the per capita income levels in Russia for the 88 administrative divisions comprising oblasts and autonomous republics grouped into 11 macro-economic regions. This data for the years 1993, 1994 and first half of 1995 reveal certain astonishing trends of widening disparties in the income levels both among regions and within each region. A major anomaly lies in the fact that disparities have increased in 1995 even as the country was expecting hopeful signs of economic stabilisation and decline in inflation rates. Out of the total of 88 administrative divisions (also called 'raions' in Russian), the number of 'poor regions', i.e., those below national average per capita income, increased from 39 in 1993 to 52 in 1995, while the number of 'rich' regions with higher than average income has declined from 25 to 17 in the same period. Some basic data may help in understanding the issue. The average per capita income in Russia increased from 16,900 roubles in 1993 to 97,900 roubles in 1995, However, this nearly six-fold increase in income at current prices compares poorly with over 20-fold increase in general price levels during this period. What is interesting to observe is that income in a few raions increased by 8-10 times as in Yamalo-Nenets in Siberia, Moscow city, etc reaching up to 4,86,000 roubles while for a few regions it has stagnated at a low level of 10,000-20,000 roubles thus causing disparity of about 25-50 times among different areas in the country.

It is worthwhile to understand the causes for income disparities and their consequences. It is necessary to state at the outset that the question is not that few raions have prospered at the cost of many others. But the contention is that the majority of the raions are unable to develop in the on-going process of economic transition. However, the fact of disparity cannot be denied and this fact becomes even more glaring in the case of Ingush and Dagestan rations in Caucasus, Altai in west Siberia, Buryat in east Siberia which are not only the poorest with the lowest per capita incomes in Russia, and that even their nominal income levels have declined over the last 2-3 years. In general. Caucasus with 10 raions has been the worst sufferer and there is no information about Chechnya where civil war is going on. Caucasus is a densely populated area with a relatively high rate of population growth and has limited resource potentialities which may partly explain low per capita income. In contrast, oil and gas rich-Yamalo-Nenets raion in west Siberia has flourished recording armost 10-told increase in per capita income in three years, far surpassing the income levels of Moscow or St Petersburg. There are a few other raions such as oil rich Mansiki in west Siberia, diamond rich Yakutia in the Far East which have also recorded 6-8-fold increase in average income levels. In short, a few ratons which are richly endowed with resources such as oil-gas, precious minerals, ferrous and non-terrous minerals have flourished by virtue of their ability to export their products and earning hard currency, while others which could not realise their products even in the home markets have suffered.

Apart from differences in resource potentials, regional variations in incomes are the reflection of the effect of politico-economic reform policies unleashed in Russia by Yeltsin. As a part of the policy measures to do away with socialist economy, Yeltsin has ended overnight all policy instruments of central planning, state control, state ownership and regulation of prices, subsidy to sectors and regions, social security of employment and minimum wages, state distribution and supplies. Instead with a view to establish functioning market economy and capitalism in Russia and to make his path of reforms irreversible. Yeltsin initiated the process of decentralisation, tederalisation, free market prices, and privatisation as the sheet anchors of his politico-economic policies. But the impact of these measures has been uneven over the regions and sectors of economy partly due to problems of economic restructuring and readjustment of Russia after Soviet disintegration.

For instance, during the Sovietera, Ivanovo oblast in the central region in the European part monopolised and specialised in textile industry and supplied fabrics all over the country and abroad. It depended entirely on Uzbek cotton in the Soviet period. During the last 3-4 years cotton supply is affected since Uzbekistan prefers to export cotton to the west for earning hard currency, thus breaking old links. Hence, textile mills in Ivanovo are badly affected resulting in high rate of unemployment and Ivanovo is one of the poor raion in Russia with 53,000 rouble per capita income which is about half of the country's average in 1995. Similarly, there are several oblasts which have only one or two huge industrial complexes producing defence equipments. It is true that this was a deliberate policy in the past, But with the end of the cold war, demand for defence items has sharply declined and these units have been finding difficult in converting to civilian production. Hence, in many oblasts and raions, production has gone down and even specialised skilled workers

in these units are unable to relocate themselves nor find alternative jobs

In the past the Soviet planners had set up huge capacity industrial plants in Ural, Siberia, Volga region for producing tractors, automobile tyres, refrigerators or parts thereof, and meeting needs of the country and in the process getting advantages of economies of scale. With the Soviet disinte gration, links are broken and market for many units is affected which has forced them to cut down production affecting the employment of workers and hence their income.

It is important to note that administrative divisions which are most affected are those which have concentration of engineering industries factories producing consumer durables and other consumer goods and agro processing units. These are central Volgaraion central black soil raion north western raion which are mainly in the European part of Russia. Demand for many of these industries producing consumer durables has zone down due to their mability to compete with liberally imported goods There are 30/40 per cent industrial units in these ruons whose technologies are out dated and their products do not find market even in Russia. In the case of predominantly cricultural raions such as Krasnodar in Cincasus. Altai in west Siberia, many of them are affected due to be avy cut in state subsidy and high prices for inputs such as a rigultarial machineries, oil and lubricants firtiliser etc. and which are rising much taster than prices for their output resulting in adverse terms of trade for agricultural sector Nizuchuk former minister for agriculture has alleged that Yeltsin's policies have impoverished the primary commodity producers in Russia

What has added to the disparities is that under the prevailing conditions of decentralisation and federalisation, administrators in some better off oblasts in Siberia and Far-East and even St Petersburg city administration do not pass on the taxes collected to the federal budget and often openly defy the tederal government rules. Hence the worse off oblasts are left in the lurch Therefore, balancing national and regional interests has become a delicate and difficult task for promoting market reforms in Russia This a new problem and a reality that Yeltsin faces since regional income disparities of this magnitude never existed in the Soviet era. Due to these growing disparities, many regions such as Caucasus Buryat, etc. in Russia are facing social problems of destitution poverty beggary and crime rates of severe proportions. As a consequence, such destitutes flee to large cities for survival by begging. There is also an ethnic dimension

to this problem since many of them from Chechnya, Dagestan, Tatarstan, etc, belong to Islam Moscow at present is a classic example of this phenomenon. These problems have increased during the last 3-4 years due to Yeltsin's policies of shock therapy which have shaken the Russian society, the solution of which may take several decades.

There seems to be some realisation of these social issues on the part of policy makers, particularly with reference to 'depressed and crisis regions in Russia The Russian gov riment has proposed some measures during 1995-1997, such as initiating special federal programmes of socio-economic development preferential credit and tax concession facilities to enter prises in crisis and depressed regions, creating additional funds for retraining of workers for new job opportunities and so on. But the declaration of these policy measures appears to be at best a lip service to tackling the problems facing Russia. At any rate in the short run, the ability of the Russian government seems very much limited under the tight financial conditions prevailing in the country.

#### NATIONAL ACCOUNTS STATISTICS OF INDIA 1950-51 to 1994-95

The EPW Research Foundation has just released the above publication which contains a comprehensive set of time series on almost all aspects of national income statistics of India for 45 years from 1950-51 to 1994-95. Each set of the CSO's data presented with a description of concepts and compilation methods and also with brief critical comments on them.

# Gay and Lesbian Movement in India

#### Sherry Joseph

The emerging gay and lesbian movement offers not just alternate identities but prospects for social reconstruction. In spite of its marginality, the movement rejects the monolith and the mass. It is a reminder that if forced conformity is to be resisted it must be by representing human lives as multiple selfhood as several, communities as voluntary and various

SEXUAL practices clearly are a private matter, they become politicised when groups or institutions try to stamp them out. If gays and lesbians' claimed only the right to perform certain sexual acts however they would not have been able to create a movement. Their claim rests on their sexual identity, which is a sufficient basis for a movement It was since the late 18th century that organised groups developed a systematic theoretical critique of social life and tried to embody that critique in mass political movements designated to overthiow the existing order of economic ownership and political control. Since then marxist socialist, feminist national liberation civil rights dalits ecological and gav and lesbian movements have been born. The question of integrating these creative but diffuse and potentially divisive forces into the political mainstream has been part of the agency of the Left during the list decades [Week 1981] Issues of identity are nov at the centre of modern politics

Homosexuality has an ancient history extending back to the earliest historical records and including most cultures for which we have information [ABVA 1991] Khan 1994] Hindu festivils and sects which celebrate homosexual acts, the description of sodomy in Kama Sutra the court customs of Babar, references to women loving women in the Mahabharata and the Ramayana and the description of Tantric initiation rites which evoked the idea of universal bisexua lity in human personality are discussed widely (Subodh Mukherjee in Trikone Vol 51 1990) The behaviour has been existent in our cultures for centuries however the framework to understand and interpret these experiences as gav and leshi in identities developed only later in white societies [Shah 1993 17]

Thus gay identity or the condition of being a homosexual i distinct from the phenomenon of same sex behaviour. The term homosexual coined in 1869 by K. M. Kertbeny, a German doctor who opposed German sodomy laws but not popularised.

until the 1880's was adopted by people who wanted to make sense of their own experiences which were not adequately explained by labelling them unnatural or immoral. The Judaeo Christian values and beliefs held that non-procreative sexual acts were a sin against nature and consequently frowned upon in the culture. This value system shaped the legal binding on sodomy as a criminal offence as seen in the Indian Penal Code (IPC).

The rise of medicine and psychology as powerful authorities and arbiters of morality defined and controlled the deviant and diseased behaviours. This control led to the condemnation of many tringe or nontraditional sexual practices, with homo sexuality in the forefront Psychiatry for instince included homosexuality in the diagnostic manual and sanctioned inter ventions and treatments. Being identified as mentally all meant that homosexuals could be stripped off their civil and human rights which the heterosexual population enjoyed Under the pressure of gay and lesbrin lobbying in December 15, 1973, the board of crustees of the Americ n Psych atric Association voted to remove homosexuality from the categorie of mental illness. Onc. view about the eason for this normalisation was that the psychiatric concepts of homo sexuality did not jest upon scientific studies but were derived from Christian asceticism [Dynes 1990 796] However, homosexuality was replaced with a new citegory, ego dystonic homosexuality denoting those homose xual individuals who were distressed by their orientations and winted to become heterosexuals. This compromise category did not last for long and finally all references to homosexuality were removed from the official nomenclature [Ronald and Bryan 1994

The causes of homosexuality like the auses of heterosexuality are unknown Whatever be the causative factors homosexuality is regarded as an essence, a fixed and unchanging aspect of the identity of gays and lesbians. There are two ways of

seeing homosexuality essentialism and social constructionist. For the essentialists the category homosexual is universal and trans historical. Some argue on genetic determinants believing they were born as homosexuals. Others simply believe that homosexuals have existed always and everywhere Social constructionist theory points out that individuals interpret their personal experiences through the framework provided by the social world from the viewpoint of the social constructionists identity is a construct reflecting the conceptual structure of the surrounding social world 4 ssentialism stresses the sameness of the people throughout history who have loved their own sex and social constructionism emphisises the differences. Essen tralism sharply differentiates homosexuals from heterosexuals, while social constructionist de emphasise the différences

Some believe that the debate between those who emphasise the recent appearance of the homosexual as a distinct type of person and those who believe in a core homosexual self is a fruitless rehashing of the oldn iture versus nurture question. Others think the debate between social constructionist and essentialism can be transcended [Epstein 1987. Roscoc 1988]. However, a detailed discussion of this issue falls beyond the purview of our discussion.

#### IDENTE Y POLITICS

Identity is about belonging about what you have in common with some people and what differentiates you from others. At its most basic at gives one a sense of personal location the stable core to one's complex involvement with others. In modern world these notions have become especially complex and confusing Each one of us lives with a variety of potentially contradictory identities which battle within us for allegi ance is man a woman upper class or dalit straight or gay able bodied or disabled. The list is potentially infinite and so are our possible belongings. Which of them we focus on or bring to the fore and identify with, depends on a host of time and space factors

To understand the Indian gay and lesbian identity we have to look back to the identity politics in a wider perspective. The racist and cultural marginalisation of gay and lesbian immigrants from the Indian subcontinent in Britain and the US demanded an agenda within a racist climate different from the agenda imposed by white gays and lesbians (Editor's response to a letter by LN in Shekti Khobar, December 1990-January 1991). The impact of colonial history and concepts of orientalism upon world-views and perceptions has played a central role in

how non-white people have been defined, how they are perceived and how white-non-white relations evolved socially and on personal levels. Silenced in both south Asian patriarchal societies and the white gay communities in America and Europe, the south Asian gays and lesbians have had to invent themes, often with new terms of identification.

The debate overidentity based on sexuality starts from the point that the construction of sexuality is often ahistorical and the only sexuality that is seen as relevant is that of penetrate heterosexuality [Khan 1994:10]. This led to a quest for evidence of homosexuality in a historic perspective. Discarding the Eurocentric classification of sexuality into dichotomous categories of homosexual and heterosexual, new discourses of sexuality around a variety of experiences and desires started emerging. Thus the term alternate sexualities came into vogue. Using 'alternate' as an adjective and 'sexualities' in plural, it tries to describe those behaviours and meanings associated with those behaviours other than non-penetrative heterosexuality. This was basically an attempt to decolonise the general notion and establish the existence of various expressions of sexualities surrounding scriptures, arts, life histories, etc.

From the sexual health perspective, another term 'Men Who Have Sex with Men (MSM)', a depoliticised euphemism for gay men evolved. However, there has been some controversy attached to the use of the term MSM especially when the term is used in whole or in part to refer gay men [Duffin 1992; Pollak 1992]. Sexuality is not a key part of the sense of sexual identities of MSM and MSM is different from gay men on the basis of idiosyncratic and relatively arbitrary markers, for instance by not kissing men they had sex with.

The search for new acceptable paradigms for self-description led to the emergence of south Asian gay and lesbian groups/ publications in America and Europe after the mid-1980s like Trikone (US), Kush Khayal (Canada), Shakti Khabar (UK), Shamakami (US) and Dost (UK). The Indian counterparts had their debut simultaneously through Gay Scene (Calcutta), Freedom (Gulbarga), Bombay Dost (Bombay), Fun Club (Calcutta), Aarambh (New Delhi), Sakhi (Delhi), Kush Club (Bombay), Good As You (Bangalore), Men India Movement (Cochin), Counsel Club/Prayartak (Calcutta). Sisters (Madras), Red Rose (Delhi), Udan (Bombay), Saathi (Delhi) and Gay Information Centre (Secunderabad). Some of the groups/publications have appropriated Indian languages to express the term homosexuality in a culturally relevant way while others have tried to define it in different ways. For instance, Dost in Hindi means 'friend', Khush in Urdu means 'ecstatic pleasure' and Pravartak in Bengali means promover of a cause'. Fun Club probably derived its name from a sobriquet of Calcutta, 'The City of Joy'; Good As You (GAY) seems to appropriate the identity from the slogan 'Gay is Good'. Friends India as the name suggests provides a forum for friendship between men who like and love men.

It is worth mentioning here that the world's first south Asian newsletter on homosexuality was named Ananika, which means 'nameless' in Sanskrit (Arvind Kumar in Trikone, Vol 10(4), 1990) <sup>2</sup> It can be seen that from the state of namelessness the south Asians, in particular Indian gays and lesbians, have appropriated and subverted languages which have been integral to the invention of an identity.

The ambiguity of language reflects another important fact about the politics of the identity of gay and lesbian movement; it is maledominated. Lesbians have participated in the movement since the beginning (Amita Kar and Bombay Lesbians in Bombay Dost, Vol 1, 5/6, 1992), but they often had the secondary role that characterises their position in the mainstream society. This imbalance has deep cultural and historical roots and it points to the dilemma lesbians face when they identify with the movement. Some believe that lesbianism cannot be understood alongside mate homosexuality because the two are entirely different, partly because women are oppressed and men are part of the dominant culture (S Kulkarni and P Jagannathan in Shakti Khabar, Issue 10. October-November 1990). Thus the very notion of the co-sexual nature of the movement can be challenged. On the other hand, excluding women from an analysis would create a false impression of the movement. Though sometimes uneasily aligned, gays and lesbians share common goals and interests as well as common enemies. Because lesbianism is rooted in both the women's movement and the gay movement, lesbian issues must be examined from both perspectives.

Lesbianism is considered an integral part of the woman's movement for liberation. Flavia Agnes, an activist of the Forum against Oppression of Women, Bombay, remarks: "Many women in the movement turn to lesbianism or bisexuality as a conscious political choice, for they cannot reconcile their radical understanding of themselves and of women in general with the inequality, exploitation, lack of respect and understanding and often blatant physical force that characterise typical heterosexual relationships, whether in marriage or out of it". This point is in agreement with Shah's view (1993:115-16) on the development of lesbian identity which describes the gradual shift from political consciousness to sexual identification.

Four years after Flavia's remark, leshians experience a different situat today. The Sakhi Collective (1994:7) wri "We (Sakhi)...have not received one let of acknowledgement or support from a Indian feminist organisation. Statements this effect (e.g., 'There are no leshians i India') have been made by Madhu Kishwa of Manushi and Urvashi Butalia of Kali for Women. Sakhi has never been invited to any feminist events." However, a serious rethinking was recently done which urges gay men to help their counterparts to confront the society [Khan 1995b:51].

Today, there are three exclusive lesbian groups, Sakhi Lesbian Resource Centre and Research and Networking Institute in Delhi, Stree Sangama in Bombay and Sisters in Madras. Even though three other groups claim to be gay and lesbian groups, the visibility of women in their activities is minimal. None of the publications have a lesbian on their editorial board and the columns are male-dominated. It is also known that the lesbians who were members of the editorial board of *Bombay Dost* in 1990, no longer serve in that capacity.

#### POLITICS OF LIBERATION

A starting point of gay and lesbian liberation politics is the assumption that they are a true minority. They are like a religious minority, although a religious minority differs from sexual minority in that it is conferred at blith and passed on through the family. Also, those who take on a gay or leshian identity already have various other identities - caste, gender, nationality - which claim their allegiance [Epstein 1987:35]. Can a group many of whose members are invisible be a minority? Often, the minority status seems wrongly applied to the most visible gays as they do not belong to a minority group in the conventional sense of the term. However, with the yardsticks of discrimination, social acceptance and constitutional guarantee to freedom and liberty one can consider gays and lesbians as a minority. On the other hand, some scholars are of the opinion that gays are a self-defined minority.

Discrimination, tolerance, acceptance and equality can be seen as a continuum. They can be discussed under the framework of four concepts: homophobia, heterosexism, heterocentrism and compulsory heterosexuality. Homophobia refers to the irrational fear or hatred of homosexuals or homosexuality. Homophobia results partly from rigid ideas about gender. A man who appears womanly by conventional norms or a woman who appears manly threaten the sharp gender separation which most people take for granted. Research has shown that gay men are just as masculine as conventional men and that lesbians are just as feminine as

straight women [Storm 1980]. One of the reasons why the work of Arvind Kala on Indian Gays was criticised and rejected by the gay community was that it contained such stereotyping remarks about masculinity/ femininity (Ashok Row Kavi in Sunday Times, August 5, 1992 and Parwarz in Pravartak, September 1993)

Homophobia also leads to violent attacks on gay people. Gay bashing by pehce and heterosexuals have been reported. An obvious example of homophobia in 1994 is the outrage expressed by the National Federation of Indian Women (NEIW), a women's organisation affiliated to the Communist Party of India (CPI) against the South Asian Gay Conference in Mumbai Describing the conference as an "invasion of India by decadent western cultures and a direct fall out of our [India's] signing the GATT agreement" it urged the prime invister "not to follow Bill Clinton' immoral approach to sexual perversions in the US' and to immediately cancel the permission to hold the conference. According to NHW. the purpose of the conference is to "promote and legitimise homose cirality" which would "surely start a move of sexual permissionness." among urban youth who have become vulnerable to the volgarity of western cutton. brought to them through the media of his November 9, 1994). A warming letter via also issued by the Shry Sena legislator Promod Nalelkar to the organisers of the conference (Tol. November 1994)

The AIDS pandemic has made home phobia a more serious problem, fortidly, AIDS was known as Gay Related Immuno Deficiency Syndrome (GRID5) when it was first identified among gays in Amorica. The exclusive connection between AIDS and homosexuality has not been completely removed from the policy of the National AIDS Control Organisation a its class: fication of transmission of airc as made on the basis of homosexual contact heterosexual contact, etc. Though MSM, a nonhomophobic term, was developed it is yet to be adopted by the Indian government

The second concept under discussion in connection with the politics of gay and lesbian liberation is heterosexism, the prejudice or discrimination against gay people. Analogous to racism and sexism, the concept of heterosexism validates and strengthens the dominant group's claim to superiority and privilege. One of the ways to counter the inferiority status of gays is to bring intothe limelight eminent gay personalises who were open about their sexuality. The Nanda. magazine carried a cover tory on the journalist Ashok Row Kasa who is olienconsidered in gavericle, to be the father of the gay movement in Ir by I is biding Express featured an interview with the renowned gay painter Bhupen Knick will you though 'outing', which means forcing public figures out of the closet or someone revealing their homosexuality to the public, is a tactic adopted to battle heterosexism in western countries the practice is not common in India. Nevertheless, one south Asian gay and lesbian magazine published a glimpse of a well known south Indian politician's same sex relationship, titling the article 'First Foomies' (see Rajani Kumar, 'Jayalalitha and Sasikala, Tamil Nadu's First Roomies', Trikone, Vol 10(4), 1995). The description of Section 377 of IPC, 'Of Unnatural Offeners', clubbing together sodomy between man and woman/man and bestrality is atridently heterosexist.

A conventional definition of family that covers only the traditional family can also be considered heterosexist. With the approval of gay marriages in Denmark and Sweden. the concept of family seems to need a redefinition. Intra gender marriage, as old as 150 years, existed among the Kutchis in Guiarat (Raakesh in Bombay Dost, Vol 22, 1995) Legal recognition of gay marriages is a demand put forth by the Indian gay community [ABVA 1991 and Aarambh Brochure] For the first time a conference held in Bombay in May 1996 on Uniform thyil Code also discussed issues related to same see marriage, adoption, etc.

Besides outright prejudice against gays and lesbrans, a more subtle form of bias can be identified in the form of heterocentrism and compulsory heterosexuality. Heterocentrism is the often unconscious attitude that heterosexuality is the norm by which all human experience is measured. Heterocentrism seems to evolve out of the Eurocentric definition of sexuality There has been since the 19th century in western culture, a whole new discourse dividing the homosexual and heterosexual into sharply antagonistic binaries. Procreative heterosexuality becomes the normative process. The dichotomised, hierarchical and opposition structures of what were deemed masculine and feminine helped frame these new concepts of homosexuality and heterosexuality. The division between sexual behaviour responding procreative instincts and sexual behaviour responding to pleasure/lust instincts also formed the nucleus of the debate about what was deemed 'normal' or 'abnormal' and 'perverse' [Khan 1995al.

The notion of compulsory heterosexuality implies that people must be pressurised and coerced into heterosexual behaviour Marriage determines the person's eligibility to be considered an adult. Singlehood, more for women, is not socially acceptable except on religious grounds and marriage becomes a norm, followed by procreation. Without marriage, a person is considered irresponsible, incomplete and unsettled [Khan 1995b;

#### NATIONAL FOUNDATION **Media Fellowships** 1996-97

The NATIONAL FOUNDATION FOR INDIA is a multifaceted. professionally managed organization, acting both as a fund raiser and grant maker for development work.

The Media Fellowship Programme has been intiated by the Foundation to bring development concerns more prominently into the public agenda.

The theme for the Fellowships for 1996-97 is Conder Justice a Gender Equity - in the context of the Siri Child.

The Fellowship is open to all journalists working in any of the regional or national dailies and associated media, midcareer status with atleast 3-5 years experience.

The terms amongst others include the publication of a minimum of ten articles.

The amount for each Fellowship is Rs 1,00,000. The deadline for application is September 20, 1996

For further details/forms contact.

#### Kational Foundation for India

Zone IVA, Upper Ground Floor India Habitat Centre Lodni Road New Delhi 110003 Tel 4641864/4641865/4648490-92 Fax 4641867

E-Mail: rupsa@nfi.ren.nic.in

30]. In a situation where both singlehood and homosexual marriages are not possible, a marriage of convenience is the option. Kala (1992:189) refers to an attempt by a gay man to marry a lesbian to avoid the pressure for conventional marriage from the family and also some case histories of married gay men.

The last but a crucial point in the discussion on the politics of liberation is the gay and lesbian assertion on their rights - "to be treated equally, fairly, and equitably as citizens of India, that respect should be given to who we are, what we are; the right to choose, the right to be unmarried and the right to our own sexual orientation" [Khan 1995b:60]. The demand for freedom and equality of gays and lesbians in India was first put forth in an organised manner in the end of 1991. The Charter of Demands which contains 19 elements was published in the last chapter of the report Less than Gay. The significant elements include: Repeal of all discriminatory legislation including Section 377 of IPC and relevant sections of Army, Navy and Air Force Act; enactment of Civil Rights legislation; amend the Constitution to include equality before law on the basis of sex and sexual orientation, establish a commission to deal with human rights violations; amend the Special Marriage Act to allow same-sex marriages, etc. [ABVA 1991:92-931

Almost a year later, a demonstration was held in New Delhi to protest against police atrocities against homosexuals. Carrying placards with slogans like 'Gay is normal'. 'Down with Sec 377', 'Kya yeh apradh kiya hai? Aurat hain, aurat selu to pyar kıya hat', 'Homosexuality is neither a crime nor a disease', 'Arrest AIDS not gays', the protesters gave articulation to central gay concerns. Another poster which read 'Gays of the World unite, you have nothing to lose but your chains', might perhaps have caused Karl Marx to turn in his grave (The Indian Express, August 12, 1992). Songs sung during the protest like 'Woh hamara geet rokana chahati ham/Khamoshi todo waqt aa gavan' (They want to stifle our song/The time has come to break the silence) show the spirit of the movement. This was followed by moving a petition in the Petitions Committee of the parliament which is still

In 1994, a controversy arose surrounding reports of homosexual activities in the male wards of the Tihar Jail, New Delhi, following a medical team's visit. While the survey report of the World Health Organisation in 55 prisons in 31 countries said that there was a higher rate of HIV transmission among prisoners than among the general population (Asian Age, December 27, 1995), the Tihar jail authorities' response was to deny any homosexual activity in the prison. Seeing

this as a right occasion, a Public Interest Litigation (ABVA vs Union of India and Others) was filed in the Delhi High Court in April 1994. The petition urges that Sec 377 must be struck down as being unconstitutional on the grounds of: right of privacy is part and parcel of the fundamental right of life and liberty under Article 21 of the Constitution and is recognised by the 1948 International Convention on Human Rights, it is a violation of Article 14 of the Constitution as it discriminates against persons on the basis of their sexual orientation, and because having been drafted in 1833, Sec 377 passed by the British in all its colonies including India, is archaic and

Advocate Janak Raj Jai filed a reverse petition seeking a ban on the move to supply condoms to the Tihar inmates on the grounds that it would be a violation of Sec 377 of IPC. He is on record as having opined that the 'immoral' act of homosexuality is not half as widespread in the jail as is projected, that moral instruction, rather than condoms, is the crying need of the hour (Mojumdai Modhumita, "Sex in Prison" in The Hindustan Times, May 27, 1994) Recently, the National AIDS Control Organisation tiled a reply to the Delhi High Court that condon's should be made available to minutes of prisons as a safety measure, supported by the Indian Medical Association. However, the government has not commented on the constitutional validity of Sec 377, but has left it to the judiciary to decide. Small but significant efforts like signature campaigns, discussions, write-ups in their publications, etc., are being made by gay groups in support of this case

Visibility here is not narrowly limited to marches or parades, but includes representation in other forums also. The most remarkable event in the Indian gay movement was the project demonstration organised in front of the police headquarters in New Delhion August 11, 1992 The demonstration was a protest against the unwairanted and illegal arrest of 18 people suspected to be homosexuals. The demonstration was organised under the banner of ABVA, the activist group working against the human rights violation of marginalised groups However, gays and lesbians also joined hands with other social workers and human rights activisis. This incident received wide publicity in the media. Although this protest might be considered mild and even ineffectual in comparison to the more aggressive and provocative tactics of groups in the western countries it marked a turning point for the Indian gay community. In the tradition of Stone Wall', this small band of men and women decided they had had enough of being victimised and decided to make a stand (John Burbidge in Campaign.

November, 1994). In the early 1990s various gay publications have seen light and much earlier, 1 e, from late 1970s, people have made their preferences public

To date, there are five newsletters/ magazines published from Mumbai, Delhi, Bangalore, Lucknow and Calcutta, some periodically and some irregularly. Of these five publications, one is marked 'strictly for members only' and the remaining are widely circulated, even through selected bookstalls. Bombay Dost is available in five bookstalls at different places all over India, whereas Pravartak is sold in two, Following Bombay Dost, which has one-half printed in Hindi, Pravartak contains literature in Bengali and Hindi along with English to address a trilingual cross section of people. To supplement these, there are a number of publications from abroad made available to Indian readers, usually free of cost Recently, Trikone (published in the US) changed its marketing strategy and is distributed by groups in Calcutta and Mumbai to the Indian readers

The print and visual media have exhibited a mixed response. In the beginning of the 1990s arrests, murders and suicides brought homosexuality into the headlines. While preparing the manuscript of this paper, a full page coverage of the gay scene in India, Calcutta in particular, appeared in a national daily (The Statesman, December 24, 1995). As a strategy for campaigning for visibility, the gay and lesbian coalition has requested readers to write protest letters whenever offensive and negative coverage is given to the issue (Amita Kai and Bombay Lesbians 'Country Report 1992', Bombay Dost, Vol 1, 5 and 6, 1992; Khan 1995b 63] and posture letters of appreciation to editors [Joseph 1995] stating clearly what gays are and what gays stand for. Calls for more gays to take up careers in journalism have been given, as the mass media is the most powerful means for visibility and for combating the silencing [Rantim Bhattacharya, Trikone, Vol.9(1), 199414

The English theatre in Mumbai is one arena where gay and lesbian themes and characters are dealt with openly. From 1950 to 1990, there have been 32 such theatre performances (LN in Bombay Dost 1991) Contemporary fiction has also tried to portray homosexual characters 1 Partha looks at the treatment of male homosexuality in Bengah literature (1994). Two books published on the subject are Shakuntala Devi's World of Homosexuals (Vikas, 1979) and Arvind Kala's Invisibility Minority (Dynamic Books 1992). Another addition was ABVA's Less of Homosexuality in India in 1991 which documents human rights violations against homosexuals In 1994, Rajesh Talwai published a fictional work titled Inside Gas

Land, a satirical play on sexuality and the law which criminalises homosexuality in India.

Two major seminars have been held in India on the subject - 'Gender Constructions and History of Alternate Sexualities in South Asia' in December 1993 in Delhi, which aimed at reviving the alternate historical and mythological traditions and delved deep into diverse issues related to gay men, lesbians and bisexuals (Ashwini in Pravartak. Issue 2, April-June 1994) and a year later. another one on 'Gay Men' and Men Who Have Sex with Men in Mumbai. This First South Asian Gay Conference, as it is popularly known, in addition to generating discussions on emerging gay identities, dealt with the implications of their behaviour on their sexual health. Earlier, 1992 a seminar on Politics of Sexuality had been held in Delhi. Following the filing of the petition in Delhi High Court to decriminalise sodomy, ABVA organised a meeting in April 1995 to develop strategies of action [Joseph 1995]. Recently in December last, in the open session of the International Conference on AIDS: Humanity and Law, the constitutional validity of the Victorian sodomy law existing in India was questioned before an international audience in the context of HIV transmission

Gay themes were visible in the silver screen also. In January 1995, a programme entitled 'Images on AIDS and Sexualities: A Tribute to Siddhartha Gautani' was held in Delhi, Four documentary films 'Straight from the Money', 'Paris Is Burning', 'Before Stonewall' and 'In the Year of the 13 Moons' were screened during this event. The International Film Festival in India (IFFI) held in Mumbai in January 1995 screened the movie 'Strawberry and Chocolate', the centenary celebration of motion pictures in Delhi screened 'The Naked Civil Servant' in July 1995 and the movie 'Twinkle' was a part of the Festival of Japanese films in August 1995 in Delhi. These films are based on gay themes. In addition to this, Calcutta and Delhi gay groups organised a series of video shows on gay and lesbian stories, 'Double the Trouble Twice the Fun' and 'Destiny, Desires, Devotion'. The Aarambh group staged a play titled 'Varun' in December, 1993, written and enacted by group members. The Indian first feature film on gays, 'Adhura' (Hindi) is to be released soon.

COMMUNITY, CULTURE AND SOCIAL NETWORKS

From a structural perspective, a gay community can be defined as a full-fledged entity complete with places for social and sexual contacts, gay traders, gay churches, gay clinics, gay schools, gay recreational centres, gay residential complexes, etc. In

a homophobic society like India, so far we do not have any record of such a gay community. Then what are the gays' and lesbians' claims about their status as a community? Community means common unities as a working group of the South Asian Gay Conference defines [Khan 1995b:29]. The Indian gays and lesbians define a community in a symbolic perspective The charter of the Bombay Dost clearly speaks of this: "To provide a framework whereby all such people, both male and female from the Indian subcontinent can come together and support each other so as to show solidarity and a sense of community of such persons who have this identity of an alternate sexuality". In the list of gay groups mentioned above, there are about seven groups active in India. All the publications mentioned here carry the addresses of other gay groups. The groups provide a variety of support systems. Regular meetings, either monthly or biweekly (often fixed on a particular day of a month/fortnight) is the forum through which the sense of community is strengthened. The venue changes from public cafeteria to public open spaces to residences of individual members. Lack of availability of safe social space is often a concern expressed by the gay community Most groups especially those with publications, have a good collection of literature on the subject which they call 'Archives of Homosexuality'.

Parties and social gatherings form another part of the gay culture as also celebration of festivals and special occasions. Largescale gatherings are not rare. Sneha Sangama in February 1993 and April 1996 at Bangalore, Goan Utsav in October 1993, Masti 94 in Jaipur, and the Big Bash in May 1994, New Year's Party in Bombay and Calcutta of 1996 are examples. Gay publications provide space for individuals to articulate and ventilate their feelings and to develop a sense of identity and the 'wefeeling'. The gays and lesbians have strong networks at local levels as well as on the national level, the main agents being gay publications.

The other support systems provided by the groups are related to sexual health, counselling, accommodations and employment. With the targeting of the so-called 'high risk group' with regard to HIV/AIDS intervention, the stigma associated with gays and lesbians increased. This forced many MSM (including gay men) to go underground. Peer group training and counselling evolved as an alternative strategy to counter this situation. Humsafar Trust came up because Bombay Dost recognised that almost no work was being done in terms of education. prevention and support of gay identified men and MSM [Khan 1995b:12]. Similarly, the formation of Counsel Club out of Pravartak and Friends India registering as an NGO can be seen in the above context. A peer group counselling model was also developed based on the experience of working with gay community (Ashok Row Kavi, editorial in Bombay Dost, Vol 1, 5/ 6. 1992b). The publications provide information on various facts of HIV transmission and condom use. Condom promotion programmes through networks and advertisements are also undertaken. Testing facilities for HIV, with pre- and post- test counselling are also provided. Because of the sensitivity of the already marginalised people, care has been taken to have trained

Governments

counsellors. An advertisement in one of the issues of Bombay Dost required the service of trained social workers for their projects. Some psychologists and psychiatrists have also extended services to sex-oriented distress counselling in Mumbai and Calcutta. Nowadays more and more gays and lesbians are getting themselves trained/equipped in counselling skills and following the peer group counselling model.

Accommodation becomes a problem when the family ostracises a gay or lesbian on knowing his/her sexual-orientation (PD in *Pravartak* Issue 3, 1992). *Friends India* carried calls by gay men who are willing to share accommodation with gay men. A similar effort is being made by the Sakhi Collective for lesbians. Moreover, many gays and lesbians are extending local hospitality to those who are travelling. This trend can be seen as a strategy aimed at the building of a community.

The ongoing historical changes have led to the emergence of a variety of discourses individuals employ in order to construct their sexual identities. Prior to the 19th century, a person's sexual self was not defined in terms of the sex of his/her partners. The rise of gays and lesbians transformed 'doing' into 'being' and homosexual behaviour became a basis for their identities. In any society there are dominant modes of expression generated by dominant structures. It is these articulations that are heard and listened to, especially by outsiders. Minority groups, if they wish to communicate, must express themselves through the same dominant modes. However, there is a lack of congruence and compatibility between the ideas and experiences of minority groups like gays and lesbians and the modes of public communication available, which enforces a characteristic inarticulateness or muteness. Alternate sexual practices are seen as 'the other' of accepted or approved (heterosexual) practices. In a system of binary opposition (good-bad; right-wrong; blackwhite; constructive-destructive) 'the other' is the inferior or bad opposite of the dominant entity. The dominant entity, through the discourses it is capable of generating, constantly strengthens and perpetuates itself by self-definition, in opposition to 'the other'. Discourses function as ways of legitimating, authorising or validating some modes against some others in order to silence, control or domesticate certain elements seen as threats to the existence of the dominant entity.

But resistance to the power generated by the discourse, and hence counter-discourse, are inherent in the very nature of discourse. All the activities and issues related to gay and lesbian identity we have mentioned can be seen as the shaping up of a counterdiscourse. The Indian gay and lesbian movement is unique in the sense that much of the visible liberation efforts are made by the activist group ABVA, which does not have an identity as a gay group, while in the western countries, the movement is spearheaded by gays and lesbians themselves. However, it is difficult to comment on the future as we see a growing awakening among the gays and the lesbians in India themselves.

There is an effort to remove the act of sodomy from the category of crimes provided the persons involved are above a certain age on the grounds that it is an unwarranted attempt on the part of the state to regulate personal sexual morality by law. On the other hand, there is a trend whereby gay groups are widening their horizons of operation in search of financial support for their variety of programmes. This may lead to a situation whereby these aid-giving organisations, whether government of nongovernment, will dictate terms and conditions according to their policies leading to shifts in priority from liberation to sexual health.

The visibility of gays and lesbians is a barometer of a society's openness. The gay and lesbian network provides for the members what other communities do; a training ground for norms and values, a milieu in which they may live everyday and the social support as well as an information medium for members. The emerging gay and lesbian movement offers not just alternate identities, but prospects for social reconstruction. In spite of its marginality, the movement rejects the monolith and the mass. It is a reminder that if forced conformity is to be resisted, it must be by representing human lives as multiple; selfhood as several; communities as voluntary and various. A new definition of political pluralism would be one that judges a society not only by the plurality of groups it tolerates, but also by the plurality of identities it allows individuals to assume

#### Notes

- 1 The word gay signifies homosexual and homosexual life; it is a political term Homosexual is a broad descriptive term for feelings and behaviours and for people who are attracted to their own sex. The description applies to both women and men, but most female homosexuals prefer to call themselves lesbians. The use of 'gay' before 'lesbian' does not show any sexist attitude, but it is only a matter of popular discourse.
- 2 Reportedly, in 1978 two issues of a newsletter Gay Scene was published from Calcutta, India in Shakti Khabar, Issue 12, 1991
- 3 On June 27, 1969, the New York City police attempted to close down the Stonewall Inn, a har in Greenwich village popular with Puerto Rican drag queens and lesbians. The patrons of the Stonewall engaged in violent, unplanned and defiant action against the police

- because they were angry at police surveillance of their private gathering place. After Stonewall 'Gay Power' graffitt began to appear in Greenwich village. The Gay Liberation Front (a New Left Group), the Gay Activist Alliance and similar groups sprang up in other parts of the US
- 4 Detailed review of the visibility in media can be seen in Sultan Khan (media Watch', Bombay Dost, Vol 2(3) 1993) Debjyoti (Pravartak, Issue 2, April-June 1994).
- 5 Starry Nights and Strange Obsession by Shoba De, The Quilt by Ismail Chughter, One Day I Locked My Flat in Soul by Raja Rao and My Own Country by Abraham Varghese

# Ladies and Gentlemen,

I have great pleasure in welcoming you all to the fortythird Annual General Meeting of your Company. The Directors' report and the Audited Accounts for the year ended 31st March, 1996, have been with you for sometime and, with your permission, I shall take them as read.

# WORKING RESULTS

During the year 1995-96, your Company reported a commendable performance, setting an impressive record both in hire purchase and leasing business. Total disbursements of the Company during the year amounted to Rs. 984 or as compared to Rs. 690 cr. in the previous year, a growth of more than 42%. The cumulative receivables under hire purchase and leasing reached a record level of Rs. 1636 cr. as against Rs. 1215 cr. in the previous year, an increase of around 35%. This performance was achieved at a time when severe credit constraints were expensed by all Nes.

when severe credit constraints were expenenced by all Non-Banking Financial Companies (NBFCs) especially in the latter half of the financial year.

In deposit mobilisation too, your Company set another record Your Company mobilised fresh deposits to the tune of Rs 197 or and renewal of deposits amounted to Rs 143 or Thus gross mobilisation aggregated to Rs 340 or as against

Rs.290 cr. in the previous year. The net accretion to deposits, was again a record at Rs 119 cr as against Rs 79 or in the previous year - an increase of over 50% Total public deposits outstanding as at 31st March, 1996, amounted to Rs 550 cr us against Rs 431 cr in the previous year Your Company continues to enjoy the highest credit rating 'FAAA' awarded by CRISIL. I sincerely thank the family of more than 5,40,000 depositors spread all over the country for their continued support and high degree of confidence reposed in the Company lassurethem of our constant endeavour to maintain efficient and perconalised service and prove worthy of their trust The paid up capital of your Company doubled from Rs 12 cr to 24 cr after the issue of bonus shares in November '95. The bonus component in the paid-up capital has increased to 96.7% During the year, your Company earned a gross profit of Rs 127 50 cr - an increase of 23 5% over the previous year. Profit after tax increased to Rs 64 92 ci from Rs 50 45 cr registering an increase of around 29% Enthused by thir performance, your directors happly recommended a total dividend of 35% on the increased paid-up capital. This would amount to a distribution of Rs 8 40 cr as against Rs 6 00 cr paid last year - an increase of 40%, the highest so far, both for the level of increase and the quantum

Your Company continues to Jathere to the Prudential Norms a rescribed by the Reserve Bunk of India (KBI) for NBFCs. You will be happy to note that the capital adequaty ratio as on 3.1–3.96 was higher at 15.97%, up from 15.25% reported lant year. This is almost double the prescribed maximum of 8%. The standard a sets, i.e., performance assets, as unding to 38% classification, were also at a high selevation 99.47% of the cotal purious assets, as compared to 99.36% reported lant year.

# ECONOMIC SCENARIO

The Indian economic marks of the ratio progress and the lecture doing 1995-96 (indian contents of the action of the III Zhi and dark characteristics).

too rose comfortably by 2.4%. GDP growth was 7%. The performance on the export front was satisfactory with a growth rate of 20.8% and the country's foreign exchange reserves were in a comfortable position at US\$ 17 billion at the end of March 1996. Despite the persistent high fiscal deficit, the Government has succeeded in bringing down the rate of inflation to manageable levels.

# BUDGET PROPOSALS

It is heartening to note that the Hon'ble Finance Minister Sri P Chidambaram has reiterated the United Front Government's commitment to continue the economic reforms and liberalisation aimed at accelerating economic growth and ensuring fiscal prudence and macroeconomic stability I congratulate him for his efforts to reduce the fiscal deficit to 5% of GDP for the current financial year and his resolve to bring it down to below 4% of GDP within the next few years

The budget also rightly emphasises the need for stepping up investment in infrastructural sectors as a prerequisite for sustained growth.

The numerous proposals in this area mark a new beginning and diserve appreciation. Agricultural development, health, education and poverty alleviation measures have rightly received priority.

Reduction of survivage on corporate tax from 15% to 7.5% naw, and the intention to remove it fully next year, in

welcome

Granting of depreciation on assets jointly owned will pave the way for big ticket leasing to take off. Curbs on sale and lease back transactions aimed at preventing unhealthy trade of depreciation is a step in the right direction. These measures provide the right environment for leasing companies and will enable them to step up their efforts to assist capital formation, and contribute to economic development.

# CHAIRMAN'S SPEECH

Speech delivered by
Shri T.S. Santhanam, Chairman
at the Fortythird Annual General Meeting of
Sundaram Finance Limited held on
26th July, 1996 at Madras.

# NBFC<sup>s</sup>-NEED For a positive Approac

#### Resources

The liquidity crunch faced by the economy particularly in the second half of the last fiscal year was severe and unprecedented. Coupled with reduction in ceiling on bank lending to all types of NBFCs and moderation of lending by financial institutions(Fls), credit availability to NBFCs from these sources became scarce driving them to access funds from other sources, often at non-competitive rates. Even though there are signs of easing of liquidity,

sentments towards NBFCs do not seem to have changed for the better. White unauthorised or improper end-use of funds by some NBFCs could have invited such a restriction by banks and Fls, it did affect, unintendedly, once well imanaged NBFCs engaged in **asset based** financing. The latter culting typic NBFCs, as a responsible constituent of the financial sector, play a complementary not competitive, role to banks and Fls. They display a time legic of economic efficiency, enjoy sound reputation as reliable and different depositories with superior credit ratings and comply with all producted inorm. The regulatory framework introduced in the last few years aid environ yieldentife ation and differentiation of these well managed NBFCs. Therefore, there is a need and justification for relaxation of some of the restrictions in their favour. I, therefore, appeal to the RBI to encourage

positively these NBFCs, with such safeguards as may be required, so that they continue to play the useful role assigned to them in the financial system and help accelerate economic development. There is a strong case for treating advances by banks to NBFCs whose end-use of funds is to finance small transport operators, as a part of priority sector lending by banks on par with their direct lending to this segment.

I welcome the initiative taken by the RBI to introduce offsite and on-site inspection and supervisory ratings to NBFCs also, on the same lines as applicable to banks. I also welcome the proposal in the Union Budget to arriend the RBI Act to strengthen the regulatory powers over all kinds of NBFCs. With this legal framework and effective supervision of NBFCs, the regulatory system would be complete and pave the way for the healthy growth of this sector.

The recent move to deregulate the interest rates on bank deposits for periods of over one year is a step forward towards total deregulation. The rate of interest on debentures and all other sources is already deregulated except that on deposits accepted by NBFCs. As NBFCs have to mobilise public deposits in a highly competitive environment, it is absolutely necessary to provide some flexibility at least to offer a yield matching with the tenure of deposit. The Reserve Bank of India has just announced major relaxations by freeing the ceiling on interest rates and the quantum of deposits that can be accepted by registered NBFCs which meet the prudential norms and credit rating requirement prescribed by RBI. While this will help the NBFCs to achieve the above purpose and also a better maturity match, it will be their responsibility to ensure an orderly and healthy development of the sector as a whole.

#### Value Added Tax

In October 1995 Value Added Tax (VAT) was introduced in Maharishtra and in the recent budget Tamil Nadu also has adopted the same. The concept is welcome since it would usher in the much needed uniformity across the country By virtue of constitutional amendment, hire purchase and leasing transactions are considered as "deemed sales" and as such come within the purview of Sales Tax Acts but enjoy second sales exemptions in various States, It should be recognised that there is no economic value addition in these transactions and therefore these should be outside the scope of VAT.

Being ukin to financial transactions in substance, application of VAT which, conceptually is a multi-point levy, would make them non-competitive against other modes of financing to which sales tax does not apply. In some cases, the levy could substantially affect the viability of the said hire purchase/leasing transactions too.

Hire purchase and leasing play an important supplementary role in capital formation - more so - in today's liberalised environment and they deserve to be encouraged. It is, therefore, imperative that the matter is examined **de novo** and ensured that VAT is not applied to hire purchase and leasing

# ROAD TRANSPORT INDUSTRY

The automobile sector, has shown further strong growth in all segments during 1995-96. The output of commercial vehicles (including LCVs) increased by over 32%. With the projected GDP growth of 6.6% for 1996-97 and continued moderate levels of infetion, the fiealthy demand for commercial vehicles is expected to continue. In the passenger car segment, with the entry of a host of multinationals, the availability and choice of cars will improve dramatically. The induction of new technology, new models and increased competition, should enable the car owner to benefit and also make for a sistained growth in the output of cars.

Road transport industry plays a vital role in the socio-economic development of the country. The share of road transport in the movement of freight has increased from 11% in 1951 to about 60% at present and in the increment of passengers from 26% to 80% during the same period. This trend is likely to continue

The vehicle population has increased from 3 takhs to 253 takhs (84 times) since 1951 and as per Association of Indian Automobile Manufacturers, it is expected to cross 530 takhs by 2000 AD. As against this, the length of roads has only increased from 4 takh Kms to 22 takh Kms (5 times) during this period Maintenance of the existing road network has also received scanty attention.

The recent budget has for the first time given maximum priority to the development of infrastructure including the road network. The budgetary allocations have been increased and several schemes have been announced to encourage investment in infrastructure projects. The biggest challenge will be mobilising the enormous resources required to expand the road network commensurate with the growth of the economy and the increased vehicle population.

# PROSPECTS

Your Company has written an aggregate business of Rs. 224 cr. in hire purchase and leasing in the first three months of the current financial year against Rs. 190 cr. previously. Though the recent hike in petroleum prices may have a slightly dampening effect on the offtake of vehicles, your Company still hopes to achieve reasonable growth in hire purchase and leasing business this year also by adopting suitable funding and business strategies.

# SUBSIDIARIES & DIVERSIFICATION

India Equipment Leasing Limited performed satisfactorily during the year and made an after tax profit of Rs. 4.59 cr. and declared a dividend of 15% for the financial year 1995-96 on the enhanced capital of Rs. 10 cr. Sundaram Finance Services Ltd. also performed satisfactorily during the year and made a profit after tax of Rs. 2.07 cr. and maintained a dividend of 10% on the paid-up capital.

Sundaram Finance Securities Ltd. Formed a profit after tax of Rs 0.14 lakh only, for the period ending 31st Morch, 1996 in view of severe slump in the capital market.

Your Company has entered into a Joint Venture Agreement with Newton Management Ltd., UK and Stewart Newton Holdings (Mauritius) Limited for setting up an Asset Management Company. Pursuant to this, Sundaram Newton Asset Management Company Private Limited was incorporated in February 1996 Your Company also proposes to set up a Trust in the name of Sundaram Mutual Fund which will float schemes for mobilisation of funds from the public after obtaining necessary approvals from Securities and Exchange Board of India.

Your Company is pursuing its plans to set up a General Insurance Company and is awailing the Central Government's policy decisions in this regard

# R ECOGNITIONS

Lam happy to inform you that the Government of India has awarded a certificate of commendation to your Company under the scheme for honouring "Good Tax Payers", in recognition of your Company's meritarious record in the payment of taxes and discharge of all obligations under the direct tax laws.

Your Company was also honoured by the Chartered Financial Analyst of the Institute of Chartered Financial Analyst of India, in recognition of your Company's efforts to set a trail-blazing record of investor rewards, to string the equity cult on ethical lines among the top hundred investor-rewarding companies in India for the period 1990-95. Your Company today enjoys a price earnings multiple which is twice that of the industry average. This stands testimony to the Company's concern for rewarding the investors consistently and to the best possible extent.

# A CKNOWLEDGEMEN T

On behalf of the Board of Directors and on my own behalf, I take this apportunity to thank our depositors, customers, bankers, financial institutions and all the shareholders for the co-operation and assistance extended to your Company and look forward to their continued support labs place on record my appreciation of the good work done by all members of staff both in the field and in the office.

Note: This does not juriport to be a record of the proceedings of the Annual General Meeting of the Company

### American Colonialism and Puerto Rican 'Criminality'

Maria Milagros Lopez Nalini Natarajan

'Subject People' and Colonial Discourses: Economic Transformation and Social Disorder in Puerto Rico, 1898-1947 by Kelvin Santiago-Valles; Suny Press, Albany, 1994.

KELVIN SANTIAGO-VALLES' recent study of the construction of the labouring poor of Puerto Rico in the first five decades of US colonisation is a truly impressive contribution to Puerto Rican historiography, colonial discourse analysis and studies of the interlinking between crime and colonialism. While recent studies of criminality within the signifying practices and legal systems of the empire (most notably from India) use a similar Foucauldian paradigm. Santiago-Valles' study is one of a few of its kind in the Puerto Rican context. Given that criminality is one of current day Puerto Rico's major concerns, this study suggests important continuities between past and present. At the end of this review we will take up this issue.

The book's wide scope incorporates an account of Puerto Rico's economic history between 1898 and 1947 with the social disorders that were accelerated by the North American colonial invasion. The class recompositions that took place, the new economic devices implemented after 1898 and the corresponding discursive constructions of the 'internal other', the colonial labouring subject, are the central interests. The labouring subject's response, 'popular illegalities', is contextualised within the uneven materialisation of American capitalism that took place in Puerto Rico between 1898 and 1921. Between 1898 and 1947, the islands became an increasingly wagebased site of cheap labour for the production and export of sugar, tobacco and needlwork items.

The period examined covers the transition from a peasant economy to a pre-industrial agricultural economy and the beginning of larger-scle manufacturing in the island. These required the buying of land from the peasants and their subsumption to an industrial regime of work. Santiago-Valles describes the resultant violent transition and the spread of popular illegalities ranging from petty thefts to homicides. He examines the moments of transgression and "the persistent autonomy of these survival practices [which] set limits to advancing capitalism's ability to effectively summon and fashion the impoverished majorities... as a docile potential labour force" (p 13). The context of this 'violent refashion[ing] (p 6) is moreover shown to be overdetermined by race ('internal' and 'external'), gender, and other domestic power relations.

In tracking the above, the author has gathered an impressive collection of historical data which ranges from the period's journalistic reports and more scholarly analyses, arrest records, municipal records and other forms of chronicling everyday life. His use of empirical data and his forms of discourse analysis emphasising the textuality of facts result in a multi-referential account (see for instance his discussion of 'local women', and Christian symbology, (p 96). The documents quoted also testify to the change in signifying practices with historical events such as the world war, increasing Creole participation, or mediating documents such as Negocio Trabajado prepared as a palliative after labour strikes.

Santiago-Valles' intervention in postcolonial studies and colonial discourse analysis is significant. Recent attacks on the use of post-colonialism as an analytic category have stressed its "dubious spatiality" and "problematic temporality", geo-political silences and universalising non-specificities, its "ahistorical and universalising deployments" (Shohat); the "reckless psychologising" of some of its practicioners (Ahmad); its blindness to hard economic realities or domination by intellectuals of one region (Dirlik). While we do not wish to undertake the project of countering any of these here we consider Santiago-Valles' book to be an enabling example of what post-colonial critique can produce. Santiago-Valles' analysis is locally specific, attentive to economic history and offers a very provocative reading of the signifying practices of US colonial history in Puerto Rico. The analysis breaks new ground in bringing Puerto Rico into the post-colonial paradigni, thus extending and clarifying the perspective's provenance as a positional rather than essential or chronological term.

Post-colonialism (as a perspective which highlights colonialism's founding role in contemporary oppressions) is privileged in Santiago-Valles as an analytic category through his: ..stained focus on the signifying practices of US imperialism in the subjugation of Puerto Rico. Santiago-Valles' text explicitly compares US 'production' of Puerto Rican colonised space to the 'Orientalising' manoeuvres Edward Said has outlined (p. 7). Accordingly, the signifying practices of US colonial discourse depend, like colonial discourses woildwide, on such narratives as 'mantfest destiny'; the civilising mission

bringing health, education, sanitation to the colonies; racial superiority; and a construction of the colonised space as a journey into a degraded (and now discarded) past.

These discourses seek to consolidate a colomsed 'other', the homogenised (in his words) "Porto Rican" (p. 239-40). In dismantling this homogeneity, Santiago-Valles analysis textualises Puerto Rican heterogeneiv, and it is in this process that the classed, gendered, raced subject comes into view. The various subjects - black urban artisans, 'whiter' peoples of the interior, prostitutes, Creole propertied classes, runaway children - pose a heterogeneity which challenges and is yet elided in colonial textualities. At the same time, the asymmetries of the colonial relation, the 'ambivalence' of colonial address theorised by Homi Bhabha, result in new subjects, the indigenous elites, the Creole propertied classes. The colonised reaction to this ambivalence is discussed under the trope of minnery, Minnery, according to Santiago-Valles, is a useful problematic in examining how the 'subalterns' on the island, the nonpropertied classes, were racialised (as nonwhite) and gendered (as female) in the Creole attempt to gain favour with the North American colonisers. Many instances of Creole attempts to mimic colonising discourses are discussed in the account. An especially telling one is the way a certain homicide was read by a university professor as marking the behaviour of the 'non-white' labouring class. The text highlights the aportas and inconsistencies in discourse (Creole and North American) that simultaneously criminalise and dominate the non-propertied subalterns, treating them at once as sexually libidinous and amoral, as well as docile, childlike beings with little malice

A similar disjunction between textual 'hybridisation' as resistance (in some postcolonial formulations), and the marginalising of racial 'hybridity' (under the sign of the non-Creole, 'non-white' subaltern) may be seen to emerge provocatively from the text. Actual racial hybridity as a sign of difference threatening to the 'whiter' propertied classes exposes purely discursive notions of hybridity by cliding the violence of racial encounter in the imperial theater and in Abdo Jan Mohammed's words, "focusing on celenial discourse as if it existed in a vacuum".2 Thus, both mimicry and hybridity become further means of clite Creole marginalising of the subaltern and extending the provenance of the colonial strategy of repression.

Drawing from the perspectives of the Subaltern Studies group in the Indian context, Santiago-Valles offers a revisionary study of the colonised by doing two things. First, in his avowed adaptation of Gayatri Spivak's formulation, he plots moments of changes plural and confrontational rather than transitional. The text records many such moments of confrontation. Second, he traces how

such changes are marked by functional changes in sign systems (p 6).

A significant aspect of Santiago-Valles' deployment of post-colonial theory is his range. He moves constantly between registers, combining archival readings with feminist, psychoanalytic, and economic analyses. This contributes a striking density to his text. In the Puerto Rican context, this approach which we call 'totalising' has strengths as well as weakness.

Significantly, for the charge of economic 'blindness' levelled against some varieties of post-colonial criticism, Santiago-Valles' text is far from ignoring the materiality of oppression in favour of its textual aspect. His text is scrupulously researched with details of the economic dispossession of the non-propertied classes, details of criminal behaviour ('popular illegalities') and the historical tracking of the change in the inscription and regulation of crime (which further subjugated and criminalised the 'subalterns') alongside socio-economic changes.

Santiago-Valles' argument claims a casual and structural link between criminal and illegal activity and economic factors induced by American colonialism. At the same time, these activities are textualised in the discourses justifying further punitive restrictions, all subsumed under colonial 'surveillance'. Increasingly, the Creole propertied classes associate themselves, in a typical colonial move, with the colonising lawgivers. The argument linking 'insides' (subjectivity and sexuality) and 'outsides' ("hard economic realities") hinges on the correspondence his text attempts to establish between the colonial representations of 'popular illegalities' and the dispossessions that spawned them. Petty crimes such as looting and stealing from farms by rural 'guerillas' are linked in the first decade of US imperialism with famine and forced nomadism; homicides in the second decade are used to inscribe and regulate labour strife, and child nomadism in later decades is linked to scarcity and high costs of living (p 233). The homicides and violence were typically read in racial or gendered terms and used by the Creoles to distance themselves from the 'internal Others', as well as to emphasise these 'others' as degenerate and in need of punitive action. There is a balance maintained throughout, between discursive and material.

Santiago-Valles' account offers an interpretation that explains better than earlier Puerto Rican historiography certain features that characterise contemporary life in Puerto Rico. His focus on the non-worker or the sub-proletanat (Marx's 'lumpen') challenges the attempt, under the sign of Marxism, to 'produce' a struggling working class in the 1970s and 1980s analyses. In this sense, Santiago-Valles challenges the sociohistorical analysis carried out during the 1970s and 1980s by Puerto Rican radical historians and sociologists.3 Their emphasis had been the documentation of the working class and its culture along the lines of E P Thompson. Their point of departure had been the industrial and agricultural proletariat and their efforts at developing a political pole of strength during the first half of the century. A progressivist, positivist, mode of productionist bent, under the sign of Marxism, characterised these efforts.

Nationalism, on the other hand, was another marker of anti-imperialism, which was however eager to identify the formation of a Puerto Rıcan national identity with the exclusion of the "evil disposed classes" that Santiago-Valles emphasises. The text points to elite appropriation of the anti-colonial platform.

In other words, this study is a departure from the conventional Marxist accounts (in dominant Puerto Rican historiography) of the development of capitalist modes of production and consequent cultural patterns. The theoretical explanations as well as consideration of other sectors not tied to the logic of production were hardly examined. Santiago-Valles' valuable and innovative focus on the non-worker ties up with the peculiarity of Puerto Rican insertion into the work regime. It throws light on the pathology of the Puerto Rican, his/her 'docility' in terms of his/her non-subsumption within the real regime of labour. Anthropologists have noted the Puerto Rican's resistance to hierarchy, his/her reluctance to work in teams. As Santiago Valles shows, the transition from the formal (imposed externally) to the real (internalised by the workers) subsumption of labour in Puerto Rico remained imcomplete.

The author details the North American colonisers' difficulty in subsuming the population within an industrial regime of work, attributing it to the "weakening effects and dark forces of a tropical nature" (p 67). Santiago-Valles reads this "opposition to working for anyone else" (p 69) as a result of "the nature of the forms of exploitation and the instability of the dispossessed sector' (p 64). Nomadic work and a variety of sources of income, legal and illegal, forced these sectors to shift constantly between places and forms of employment. Very significantly, this focus on non-work helps explain the present where 70 per cent of the population is outside the salaried wage structure. Comparisons can be made between the dispossession the book records and the condition of the deskilled and expelled working force on the island today, with its concomitant 'idleness rate'. Official unemployment rates in Puerto Rico are approximately 18 per cent while idleness rates for the total population between 16 and 65 years of age are 70 per cent. This has moved it to a 'tertiary' service economy, a condition 'peripheral post-industrialisation 4

As Santiago-Valles stresses, criminality and violence are the major official and unofficial concerns on the island. Non-work and criminality continued to be linked in Puerto Rico, and Santiago-Valles' study points out the historical antecedents of contemporary criminality. As in Fernando Pico's Los Gallos Peleados (1988), the idyllic Puerto Rican past of nationalist mythology is shown to be illusory. The micro-disorders

and tendency to lawlessness that spread out of the newly re-colonised space are well described in an effort to explain modes of subjection. In contemporary Puerto Rico, the dispossessed figure crucially in the concern over criminality and violence, and in the resulting punitive discourses and legal measures against criminals, drug users, and welfare recipients. For instance, during 1993 and 1994, 49 communities in public housing projects have been 'intervened' in by the Police and the National Guard in an effort to clean up 'decency zones'. Urban and suburban areas wall themselves in and private security guards and gadgets are a common feature. While official statistics are high, the imaginary fear they sustain is even larger.

Finally, we consider the charge of totalisation. Using the colonised subaltern to understand every single aspect of the society: race, gender, domestic violence, modes of accumulation - is impressive but problematic. This ambitious totalising move is important in that it explains, better than dominant Puerto Rican historiography, certain realities in Puerto Rico today. This premise allows a near total reinterpretation of the period from the perspective of the dispossessed. It explains the process, ignored hitherto, through which non-workers, the peasants/subalterns, were constituted.

However, there are many contradictions that escape the totalising post-colonial paradigm. Santiago-Valles' account does not adequately convey the combination of resistance and conformity to the colonising process, expressed today in the Annexionist impulse. The resistance-conformity in his text is confined to the Creoles, and conformity withheld from the subaltern. It does not explain why the sub-proletariat, even today, shows a pro-American tendency and consistently votes for Statehood.

Second, we raise a possible negative consequence of the use of analysts as Memmi, Fanon and Cesaire. While these analyses made crucial contributions to the understanding of colonialism and its cultural, subjective and sexual dimensions, the results can be psychic cul-de sacs for the colonised. Viewing colonialism as determining colonised mentality results in a taxonomy which works to legitimise the inferiority of the colonised. In Puerto Rico, the discussion around the colonised psyche engendered a discourse of the docile Puerto Rican (who accepted the colonial condition and lacked the drive to progress), even though the intentions were quite the opposite. Sociologists, psychiatrists and psychologist who shared an anti-imperialist stance nevertheless provided the 'empirical data' which in turn certified Puerto Ricans as interior subjugated

Finally, Santiago-Valles' claim about the voicelessness of the oppressed sectors locates signifying power too exclusively in Creole-North American discourses. It entails the legitimation of a single official public sphere where one should aspire to be heard, rather than a multiplicity of other spheres where 'the othered' do and did have a voice and are listened to. This suggests a 'vacillation'

within the author's own methodology of the chronicling of everyday life. Discourses such as gossip (chisme), whose popular and anonymous vocality can be a way of reclaiming culture from elitetextualities; music (like the little known 'Las Cadenas'); and other expressions of the popular everyday should also be seen to produce subaltern disturbances.

## **Government and Industry**

Sanjeev Ghotge

Technology and Competitiveness: The Case of the Brazilian and Indian Machine Tools by J P Wogart, Aasha K Mehta and Arun Mehta; Sage Publications, 1993; pp 175.

THE chief concern of the book, which also defines its framework of enquiry, is to challenge Michael Porter's thesis of the limited role of government intervention in specific branches of industry which are deemed to be of national importance. Accordingly, the authors have marshalled facts and evidence to indicate that government around the world have given attention and support to the requirements of their machine tools industry. In the particular case of Brazil and India, which are the chosen case studies for in-depth examination, the book attempts to analyse the alternative strategies the two countries could pursue in future in supporting their machine tools industry The other issues which are pertinent to the broad framework of the study include the interrelationship between the micro electronic revolution, development strategies and international competitiveness. Successive chapters discuss general issues of technological development and in particular of the electronics revolution, the role of government in a number of countries, the emerging context of worldwide competition in machine tools, the role of demand with respect to quality and price and historical response strategies to demand in the form of import substitution and import diversification and. finally, analysis of supply with particular reference to training of the labour force and the rise of entrepreneurship. The concluding chapter evaluates the usefulness of porter's framework after having examined developments in Brazil and India as well as two other developing economies, Taiwan and South Korea.

Since Porter's thesis on 'the diamond of national advantage' occupies such an important part in the book under review, it is important to briefly refer to the basic elements of Porter's thesis Porter's thesis concerns the importance of the competitive spirit of individual firms and their environment which evokes a keen response from those firms. The critical environmental force is the pressure excited by demanding buyers on the producer to improve, innovate and upgrade. This in turn leads to inter-firm competition amongst the producers. Factor conditions and the rate of efficiency in creating, upgrading and deploying factors of production also assume importance, Lastly, the availability of major inputs and the international competitiveness of home-based suppliers are also a necessary ingredient These four together constitute the 'diamond of national advantage' according to Porter, who contends that government intervention has played a relatively minor role in enhancing competitive performance. Porter contends that in the case of Japanese robotics, the early and sophisticated demand from automobile and appliance industries led to the creation of competitive conditions and inter-firm rivalry in Japanese markets.

However, as Wogart et al show, the actual policies and development paths followed by a number of different countries do not confirm to Porter's thesis. Wastephal (1981) studying Korea has shown that infant industry protection has 'worked', Fransman (1986) cites the example of Japan to show how ruinous competition was controlled in the early intancy stage until firms reached competitive maturity. Then there is the evidence of the strong recuperation in both West Germany and Japan following the destruction of their industry in second world war. The role of MITI in particular has been widely commented on, particularly in its creation of Japan, Inc., brough financing numerous initiatives in the machine tools and automation sectors such as CNC and FMS. The Japan Development Bank also provided easy credit and depreciation terms. Similarly, the UK government started demand stimulation programmes aimed at specific technology sectors such as FMS, besides government supported R and D and support to small hi-tech companies. Three other EEC countries - Italy, France and West Germany had - programmes of easy credit for machinery purchase, research promotion and subsidised R and D personnel costs. In Sweden, based on the recommendations of a group of social scientists, some 'leading edge' companies were financed for highrisk pilot projects. Other examples abound: a centre for the development of multivendor hardware and software in Genoa. The Basic Research in Industrial Technology for Europe (BRITE), the FAMOS programme in flexible automated assembly are a tew of the impressive list of government supported projects as reported by UNISO. The US machine tool industry has not received explicit government support in R and D or otherwise; in fact, in the US case, the macroeconomic conditions (overvalued dollar, high public spending) helped foreign competition at the cost of domestic producers. In the US case, however, the role played by defence demand historically in fostering machine tool development needs to be borne in mind

As all these instances tend to show, governments across the world have had a role to play in nurturing competitive development in their national machine tools sector That, however, is only one part of the story. Firms have responded to the imperatives of technology development, tantamount to a revolution in manufacturing in the last 10 to 15 years, in a variety of ways including (i) changes in cost structure and out-sourcing, (ii) increasing design skills and R and D capabilities, (iii) system integrating activities, (iv) forming strategic alliances with other firms and (v) extending marketing and services. These responses were strongly supported by the presence of a strong engineering sector an ambitious automobile sector, a skilled ancillaries sector and government support. It is the mutually reinforcing nature of the different activities that can ultimately make a difference between dynamic technological performance and passive 'protectionist' policy frameworks as has been the case in India in the past.

As all those involved in the machine tools sector will recognise, the universe of machine tools production and development is a complex one even by the standards of other technology sectors. It consists of about 3,000 different types of machine tools, each with its specialised assortment of tools, accessories and attachments. No country in the world manufactures every type of machine tools. yet the top 35 machine tools producing countries in the world also account for 96 per cent of machine tool consumption. In other words, the universe is quite small and the acquisition of capability in this crucial sector is well worth striving for by any developing country The authors have done well in keeping alive this core question of industrial capability development and some of the options that developing countries can exercise. A more focused discussion of this question would have enormously enhanced the value of the book for practitioners, policymakers and scholars on the subject.

# **Convergence in Regional Growth Rates**

# **Indian Research Agenda**

#### Sugata Marjit Sandip Mitra

Restriction on resource movements plays an important role in justifying 'convergence' in regional income levels. The existing theories do not highlight its importance. After providing a critique of the Barro-Sala-I-Martin (1995) approach, the authors present a very preliminary study on the Indian states. It is observed that the states have been 'diverging' rather than converging in terms of their per capita income.

#### I Introduction

WITH the recent revival of interest in neoclassical growth theory, researchers all over the world have been talking about 'endogenous' explanation of 'converging' or 'diverging' national growth rates across the world. While the major part of this research has been focusing on the differential per capita growth rates among different groups of nations over a considerable length of time, a subset of them have been preoccupied with the question of convergence in regional growth rates within a specified geographic boundary. The idea of convergence is nothing new as it was buried in the conventional treatment of growth model a la Robert Solow. But the issues, those that have been made transparent through recent findings, seem to be quite interesting and have opened up avenues for further work in this area. The literature on endogenous growth is vast, intense and growing. Moreover, the purpose of this paper is not to dwell at length on the topic, but to raise a few questions regarding the analysis of 'convergence' as applied in regional context. Interested readers are recommended to go through the recent book of Barro and Xavier Sala-1-Martin (1995) and references therein.

We would first give a simple exposition of the problem of convergence as distinct from the problem of endogenising the long-run growth of per capita income. Then the thesis as to why convergence as a theory should be more suitable for comparing regional growth rates over time; would be critically discussed. We argue why regional growth models based on inter-regional trade and resource flows would be useful analytical framework to analyse convergence at the regional level. Later we report our preliminary findings from the regions within India focusing on the phenomenon of convergence working with the movements

in per capita state domestic product over time. In the last section we provide some concluding remarks.

# The Theory: A Critical Assessment

We start from the standard Solow model Think of the steady state equilibrium

$$\frac{\mathrm{sf}(\mathbf{k}^*)}{\mathbf{k}^*} = \mathbf{n} \tag{1}$$

where s - saving rate;  $k^* - steady state per capita capital stock; <math>n - rate$  of growth of population.

The long-run growth implication of (1) is that the per capita income is constant over the long run. One could bring in endogenous rate of technological progress and argue that the per capita income in physical units would grow at that rate. In a way the endogenous growth literature tries to remove the exogenity latent in the explanation of per capita growth rate. While trying to explain long-run growth rate, the new growth models look for steady states characterised by positive per capita growth rates determined within the model.

Another related question is derived from the off-steady state behaviour of the economy. Supposing that for two countries there are endogenously determined same steady state growth rates attainable in the long run. Now if we focus on the off steady state and rank the economics according to their initial capital-labour ratios, can we say something specific about the growth paths of these economies towards the steady state?

Solow model gives us a clear-cut answer. The country with lower per capita capital stock, hence lower per capita income, will grow at a faster rate. Thus, over time the two countries would converge in terms of their per capita income levels as well as the growth rates which are assumed to be the same in the long run. This is an outcome due to the diminishing marginal productivity

assumption in the Solow model. Lower initial k would imply higher r. From the Solow model it follows that

$$y = f(k)$$

$$(1' > 0, f'' < 0.$$

$$\frac{dy}{dt} = f'(k) \left[ \frac{st(k)}{k} - n \right] > 0 \quad \text{for } k < k^{*}.$$

$$g = \frac{dy/dt}{y} = \frac{f'(k)}{f(k)} \left[ \frac{sf(k)}{k} - n \right]$$

$$\frac{\partial g}{\partial k} = \left[ \frac{sf(k)}{k} - n \right] \left[ \frac{f''' f - f'^{2}}{f'^{2}} \right]$$

$$+ s. \quad \frac{f'}{f} \quad \frac{f' k - f}{k^{2}} < 0$$
(3)

(3) is negative because of the concavity of the production function, i.e., f > 0 and f'' < 0. Therefore, initially if  $k_1 < k_2$  then  $g_1 > g_2$ . Note that the assumption of a common saving rate or a common growth rate of population is quite important. If we start from  $k_1 < k_2$  but with  $s_2 > s_1$  and/or  $n_1 > n_2$ ,  $g_1$  can fall short of  $g_2$ , implying divergence rather than convergence.

To focus on convergence it is not necessary to concentrate on a positive longrun growth of per capita income. Solow model provides the simplest demonstration of convergence - where an assumption of a positive long-run growth is not necessary. In the example above growth rate for each country is zero in the long run. Yet on way towards the steady state growth rates are positive and different depending on the initial condition. For studying convergence it is not mandatory to incorporate optimum savings behaviour on the part of the individual agents as it is usually done in the formal models of endogenous growth. A constant savings rate is an adequate starting point to make one understand the basic idea of convergence. In fact the literature often falls to isolate what is and what is not necessary to hammer home the essential point.

The departure away from the phenomenon of convergence in national growth rates (henceforth growth rate would mean growth

rate of per capita income) towards regional convergence essentially hinges on the comparability of the long-run growth rates. If one could somehow control the differences in crucial growth accounting factors across nations, then one should get convergence as predicted by neoclassical growth models. Issues such as this have been discussed in Mankiew, Romer and Weil (1992). This is sometimes interpreted as 'conditional convergence'. Barro (1984), Barro and Sala-I-Martin (1991,1992) argue that regions within a national boundary sharing same legal and institutional structure could not differ much (in principle) in terms of their long-run growth rates. In other words, the crucial factors determining the long-run growth rate tend to be similar for these regions. Since we would be mostly concerned with the theoretical weakness of this approach, we shall abstain from going into the intricacies of empirical assertions. Interested readers can read Quah (1993)1 on possible criticisms of the Barro-Sala-I-Martin econometric approach. We now lay out our basic reservations against the theoretical approach towards convergence in regional growth rates.

#### III Resource Mobility and Convergence

The empiries of regional convergence suggests fairly low rate of convergence over time. It is revealed that the speed of convergence is quite similar across different data sets. 'B', the speed of convergence measure as developed by Barro and Sala-1-Martin (1995), tends to be 2-3 per cent per year in the previous contexts. A straightforward theoretical puzzle haunts us in this context. If we consider two regions with different real rates of return to capital, why does capital not move instantaneously to equalise these? In other words, with perfect resource mobility we must have immediate convergence of per capita income levels. Such a lesson is not unknown to neoclassical economics. There is an extensive literature on capital movement in the theory of international trade with rich set of results involving commodity and factor trade (see Jones (1967)). Resource flows across countries often do not follow theoretical prediction. Huge premiums may persist in global rates of return and there are reasons why that is so. This may be an outcome of country specific risks which would be reflected in the rates of return differential. But the regions within a country must not be so diverse as to preclude free movement of resources and goods.

The problems of demonstrating the idea of convergence in a typical Solow-type model is that it tends to ignore a prominent feature of neoclassical description. Interestingly growth economists were aware of this problem. Barro, Mankiew and Salal-Martin (1992) have discussed capital mobility in neoclassical models of growth. There also the idea of convergence across nations is sustained through a kind of imperfection in the capital market.

It is obvious that over time, as two regions approach similar steady states, differential rates of return persist but the gap narrows. Hence, it must be true that during such a phase capital (or labour) is not allowed to move or there are inherent mobility barriers. The idea of convergence is sustained by imperfect mobility of resources, nothing else. Diminishing marginal productivity as reflected in the concavity of production function cannot do justice to the idea of protracted convergence if resource mobility was perfect. The fundamental question therefore is why resources would be immobile between 'regions' which share many common characteristics not shared by different 'nations'.

First, how to sustain 'low per capita capital stock, high growth' relationship with some degree of resource mobility. This is a theoretical problem involving regional trade

and investment. The trade-theoretic counterpart of the problem is 'why factor prices would not be equalised among regions'?

Second one is empirical. One has to find out evidences indicating whether resources are immobile between regions. Suppose one could find some evidence that resources are somewhat rigid with respect to their locations, then the theory of convergence has a basis resting on the concavity of the production function. But evidence to the contrary must mean that there is something else going on. Resource mobility would mean much faster rate of convergence within the Solovian structure.

Borro and Sala-I-Martin (1995) analyse the relationship between migration and growth. They show that for the US economy, migration. ceteris paribus, does not respond much to differences in the levels of per capita income. On top of this, movement of labour does not significantly alter the convergence rate. The first part implies that there is not much movement in response to the market signals. There may be 'region-specific' features guiding the movement of labour and such restricted movement may be causing the result.

The delinking of the idea of convergence from the sphere of 'nations' to 'regions' is

TABLE : DATA

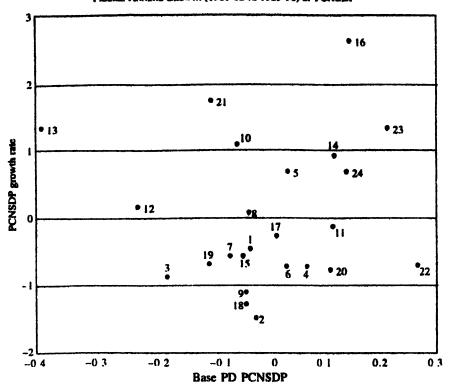

| State             | PCNSDP in Base<br>Pd (1960)<br>(Rs) | Average Annual<br>Growth Rate of<br>PCNSDP 1961-62 | Log x, - Log x | $g_i - \bar{g}$ |

PCNSDP stands for per capita net state domestic product

justified because regions are much more 'homogeneous' and therefore they would tend to converge towards similar long run steady states. Yet they must be 'heterogeneous' to some extent also. Such 'heterogeneity' gives birth to the persistent interest/wage rate differentials so that resource movements are not spontaneous.

#### IV Indian Research Agenda

A salient motivation of the entire planning process was to reduce the extent of regional disparity. The turning point of 1991-92 is meant to be justified by the overall failure of the planning process. A natural question to ask is: how different states in India have fared in terms of per capita growth rate over the last 40 years or so. Has there been a tendency for the states to 'converge' in the sense discussed earlier? The evidences so far for the regions within the US, among the Japanese perfectures and group of OECD nations have been quite convincing, although the theoretical justification is weak. India does throw up a magnifying research agenda as to whether the states can be treated as 'regions' or 'separate countries' within a country.

The most intriguing problem is to create and test a comparable and reasonable data set encompassing the states for a large number of periods. At this stage it is not done and we go by the CSO various issues, and the economic survey. We are not producing any kind of econometric exercise in this paper. Our task is to find out whether there is any a priori reason to believe that the states within India have been converging to some extent. Some degree of convergence would support the view that the centralised planning process did help in removing a particular element of disparity.

Data available to us go from 1961-62 to 1989-90 collected from CSO various issues; economic survey and the Centre for Monitoring the Indian Economy manual. The entire exercise is a 'first approximation' and should not be taken as an end in itself. We have converted all per capita net state domestic product interms of 1970-71 general price level. Hence, they are all expressed in 1970-71 prices. We are aware of the measurement errors o caused by not allowing the individual state price-levels to be the

deflators. We propose to do it in our subsequent work. In the table we have tabulated the base period (1961-62) per capita net state domestic product (PCNSDP) at 1970-71 prices and the average growth rate for the entire period. The figure represents the proportion between the base period PCNSDP  $(x_i)$  for each state and the average  $(\hat{x})$  expressed in logarithmic terms ( $\log x_i - \log \bar{x}$ ). The vertical axis denotes the deviation from the average growth rate  $(g_i - \bar{g})$  of PCNSDP. The numbers corresponding to each state are given in the table.

The figure suggests some interesting patterns. First note that a clear-cut 'negative relationship' between the variables is absent. While Manipur and Orissa starting from a low base period income have grown faster and West Bengal did exactly opposite there is a large band of states such as Tripura, Jammu and Kashmir, Andhra Pradesh. Tamil Nadu, Himachal Pradesh which started from different levels but roughly grew at the same rate. Karnataka, Harvana, Puniab. Sikkim, started with relatively strong base. and continued to grow at a faster rate. Kerala and Arunachal Pradesh started with a similar level as the other states belonging to the thick band in the middle, but grew much

If one ignores the states such as Orissa and Manipur, the dotted art work shows roughly an upward drift. This suggests that prima facie there is no evidence that the states in India have been converging in terms of the PCNSDP. In fact we have an evidence which suggests that barring the states belonging to the thick band, strong states grew even stronger.

This observation poses two distinct challenges to the existing and dominating strand of theory explaining regional convergence. First, if we assume that each state is progressing towards its own 'steady state', then clearly these 'steady states' do not seem to be the same. Even at the regional level we observe a feature that endogenous growth theorists believe a typical 'cross-country' experience, i e, poorer countries growing at slower rate than the richer ones.

Second, the simple 'Solow type' conclusion whereby the regional convergence follows from the basic law of diminishing returns, cannot be sustained. Hence, it requires a separate analytical framework to capture the 'divergence' phenomenon at the regional level.

#### V Concluding Remarks

We have tried to present a summary and a critique of the 'convergence hypothesis

quite popular these days in the literature on endogenous growth We have presented certain figures for the Indian states for the last 30 years and showed that they behaved differently from the regions within the US. Japan and the OECD nations We admit a couple of limitations regarding the data set Also Barro and Sala-I-Martin (1992) had a data set covering about 100 years for the regions within the US We do not have it. We tried to look at the 30-year period preceding the phase of ongoing liberalisation and found some reasons to question the application of the standard theory We propose to do the tollowing

We would like to persue a full-fledged econometric exercise to precisely show the pattern of 'divergence', after correcting the data with state-level deflators. Second, we shall try to build up a theoretical model that suits the observation after isolating the reasons for the pattern of state-level growth rates For example, we shall analyse whether allocation of developmental assistance by the central government had anything to do with such pattern A series of alternative measures of per capita growth rates would be attempted

as well as some analysis would be done on convergence or divergence at the sectoral level, i e. in agriculture, manufacturing, etc All said and done, we do teel that tocusing on per capita income levels is itself a narrow objective. It would be nice if a massive effort is put in to construct human development index for each state and the evolution of such indices over time 2

# Diversification of Economic Activities and Non-Agricultural Employment in Rural Gujarat

#### Jeemol Unni

A household may diversify its activities by increasing the number of workers in the household or by the participation of each member in more than one economic activity. The latter is the focus of the discussion here. This paper views diversification of economic activities and participation in non-agricultural employment from the perspective of an individual worker in a rural household. His/her decisions regarding whether to participate in economic activity, the number of activities to undertake and the sector (agriculture or non-agriculture) of activity are combined and analysed in a single multiple choice model.

THE structure of employment in the economy is expected to shift relatively away from agriculture and towards industry and services with economic growth. The analysis of successive Indian censuses had not indicated any such shift until quite recently. In the last two decades some diversification of employment towards the non-agricultural sector in rural India has been observed. An interesting debate on the processes that facilitate or retard the growth of nonagricultural employment in the rural economy ensued In an earlier paper, a review of available evidence, suggested two divergent dimensions leading to such diversification.1 These were broadly termed 'agricultural growth led diversification' and 'distress diversification'. A series of papers has later tried to grapple with the problem of disentangling the effect of the two divergent phenomena with varying degrees of success.2

The processes of diversification can be analysed at two levels - the regional level and the individual or household level. Most of the studies have utilised regional level (state/district/village) data to analyse the problem. In the majority of studies at the aggregate level, the relationship between various macro indicators such as, agricultural development, urbanisation, poverty and unemployment, and the proportion of nonagricultural employment were studied. Some studies have attempted dynamic associations using growth of non-agricultural employment over two time points with changes in various macro indicators during the period.3 These relationships were used to analyse whether the growth of non-agricultural employment at the regional level was growth led or distress induced.

While this is an interesting approach, it is of limited use to understand the reasons and processes by which an individual or household diversifies its economic activities or engages in non-agricultural activities. This can be understood only at the micro level. The household is the basic decision-making unit for the allocation of family labour between various economic and non-economic activities. The process of diversification into

non-agricultural employment has to be viewed differently when looked at from the dynamics of household decision-making.

In this paper I propose to view the diversification of economic activities and participation in non-agricultural employment from the perspective of an individual worker in a rural household. From this perspective the aggregate macro arguments for diversification of economic activities can be restated as follows. Diversification can occur from a position of strength as a process of investment of surplus generated from the primary activity, agriculture or non-agriculture. 4 This can also be viewed as a process of diversifying risks in production. Multiple economic activities can also occur from a position of vulnerability and used as a household strategy of survival. This would involve long hours of work at very low levels of labour productivity.'

#### **ECONOMIC DIVERSIFICATION OF HOUSEHOLDS**

Gujarat is an industrially and agriculturally developed state located in the western part of India. There are, however, significant intra-state variations in levels of industrialisation and agricultural development. A significant part of the state is semi-arid with limited irrigation facilities. Bulk of the agricultural activity in this region is undertaken during July to January, the official monsoon and winter seasons.

A primary survey was conducted in 30 villages belonging to five districts of Gujarat state in India in 1988-89. The number of households selected were 3,760, using a stratified random sample. The households in each village were stratified into four categories, viz, cultivators, agricultural labourers, household industry (including skilled workers) and other non-agricultural households. All households engaged in household industry were surveyed. Besides, one-fifth of the cultivator and agricultural labour households and one-third of 'other' households were randomly selected for the primary survey. Information on individual and employment characteristics of all

members of the household and household assets was collected for the year 1987-88, which was a drought year This forms the data-base for analysis in this study.

Rural households undertake, often simultaneously, a variety of agricultural and non-agricultural activities. Consequently, their participation in non-agricultural work cannot be adequately analysed without undertaking the relation between agricultural and non-agricultural activities. Moreover, the nature of participation of household members in economic activities is influenced by their access to land and other assets, etc.

Table 1 presents the weighted percentage distribution of households in the sample villages by their major source of household income. The number of households in the villages surveyed is also estimated. Less than half (about 45 per cent) of the households has agriculture as their major source of income. The proportion of households undertaking non-agricultural activities as their primary source of income may be little high due to the drought that prevailed during the reference year, 1987-88. A relatively large proportion of households are found to be dependent on scarcity reliet works in the districts of Bhavnagar and Mehsana.

In addition to the major source of income. the households in the study villages participated in a variety of subsidiary activities. Table 2 indicates the average number of sources of income reported by households with different major sources of income in the selected districts. On an average, the surveyed households had 2.3 sources of income; the number ranged between a high of 2.7 for cultivator households and low of 1.8 for households primarily engaged in (a) allied agriculture and (b) other non-agricultural activities. In general, apart from cultivators, households primarily engaged in scarcity relief work and other non-agricultural labour reported more than the average number of sources of income. Villages in Bhavnagar provided the only exception.

Table 2 also shows the proportion of households that did not report any subsidiary sources of income and specialised in only

one economic activity. Overall, this proportion was higher among non-agricultural households than among agricultural households in all our 'surveyed' districts. The percentage of households reporting subsidiary source of income was higher among households primarily engaged in cultivation, scarcity relief work, non-agricultural wage labour and agricultural wage labour. In all, only about 24 per cent of households reported no subsidiary source of income. This proportion was relatively high in the districts of Bhavnagar and Valsad.

Table 3 suggests that access to land provides more possibilities of diversification. The households primarily engaged in scarcity relief work more often had access to land than other non-agricultural households, presumably because many households engaged in scarcity work had to abandon cultivation due to drought. This perhaps explains the relatively high proportion of households with only one source of income in Bhavnagar district.

Information was also collected in the primary survey on the nature of the subsidiary source of income of the household. Table 4 provides a cross-tabulation of households by major and subsidiary sources of income. The subsidiary activities engaged in most often were allied agricultural occupations (40 per cent of households) followed by agricultural labour and cultivation. About 10 per cent of households reported scarcity relief works as a subsidiary activity. The proportion of such households was, however, higher among cultivators and non-agricultural wage labourers. The latter probably worked as agricultural labourers, in a primary or subsidiary capacity, during a normal agricultural year. Participation in non-agricultural activities such as self-employment in manufacturing, trade and regular employment on a subsidiary basis was quite limited. In general, most of the nonagricultural households reporting subsidiary activities had subsidiary income from agricultural activities (except for agricultural labour), the latter often were made possible by access to land.

Process of Household Economic Diversification: Diversification of economic activities at the household level can occur through two processes. The household may diversify its activities by increasing the number of workers in the household, engaged in different economic activities. Or it may diversify by the participation of each member in more than one economic activity.

Table 5 presents the work participation ratios (WPRs) by the major source of household income. In order to understand the gender dimension to economic diversification the analysis at the level of individuals is done separately for men and women. The female WPRs are lower than males, as

expected, and the variation across household groups is also greater. The WPR is higher in agricultural households as compared to non-agricultural households. This was true for all districts except among males in Mehsana, perhaps due their higher participation in scarcity relief works. Earlier it was observed that agricultural households also reported a larger number of economic activities.

Among the non-agricultural households, those primarily engaged in scarcity relief work had the highest WPR, particularly among women. The female WPRs were lower in all types of non-agricultural households (except those predominantly dependent on scarcity relief works) when compared to agricultural households.

Economic diversification of the household also occurs with the participation of each member of the household in more than one economic activity. Table 6 presents the average number of economic activities per worker by household groups. Male members in agricultural households were found to participate in more economic activities compared to non-agricultural households.

The opposite was true for female members. However, both men and women in households primarily engaged in cultivation and scarcity work reported the maximum number of activities, about two per worker. The number of economic activities per worker was higher among landed than among landless households (Table 7). Earlier we had observed that access to land provided possibilities for diversification to the household.

#### MULTIPLE ACTIVITIES PER WORKER: THE MODEL

The analysis so far suggests that households in rural Gujarat diversify their economic activities through two processes. That is, by increasing the number of workers in the household and/or by each worker undertaking more than one economic activity. In this paper I shall analyse the second type of process: What determines the individual household member's choice of economic activity?

The choice of occupation consists of a number of inter-related decisions. From an individual's point of view these are: whether to work (participate in economic activity); and if yes, how many activities to undertake and the nature of the economic activities, eg. agricultural/non-agricultural or self/wage employment.

To elaborate, the basic choice of whether to participate in economic activity consists of two additional dimensions. The individual chooses the nature of economic activity agricultural or non-agricultural (sector of activity)/wage or self-employment, Further. he chooses whether to specialise in one economic activity or diversify into more than one economic activity. Since these choices are made simultaneously by the individual we combine the decisions regarding work participation, number of activities and sector of activity into a single multiple choice model. The analysis regarding the choice of self versus wage employment was analysed elsewhere.7

The occupational choice model consists of five choices as follows: (1) The individual specialises in only one agricultural activity (2) He/she is primarily engaged in agricultural activity and also undertakes a second economic activity in any sector; (3) The

individual apacial pair in many distributive agricultural activity; (4) North is primarily engaged in non-agricultural work but also undertakes a second economic activity in any sector; and (5) The individual does not participate in any economic activity.

An analysis of the determinants of occupational choice requires the identification of exogenous factors. That is, factors that are not determined together with the occupational choice by the individual. The exogenous factors hypothesised to influence occupational choice in the model can be grouped into three kinds of variables.

- Individual characteristics age and education.
- 2 Household characteristics value of land holding and value of other productive assets and
- 3 External regional factors village wage rate distance from the nearest town and density of village population

Tentative hypotheses regarding the influence of these variables are discussed below. Age is clearly exogenous since the individual cannot influence it in the current period. Level of education is assumed to be determined by the parents and not by the individual so that choice between education and work rarely occurs.

Education is expected to enhance an individual's performance in his chosen activity. Among wage employees better educated workers may have a higher market wage Educated self-employed workers may also earn higher returns through higher productivity levels. Higher income accruing to such better educated workers may reduce the need for a second activity and encourage specialisation Other things remaining equal better educated workers may also be expected to be employed in non-agricultural activities, particularly in salaried jobs. Further, to the extent human capital accumulation occurs with age older persons may be expected to specialise in specific activities. The life cycle phenomenon will result in single activities being associated with higher age

Further, the occupational choice is determined by the non-earned income (asset) status of the household to which the individual belongs in rural india the land market is not very well developed and there is little buying and selling of land Owned land can be broadly assumed to approximate inherited land Hence, value of land owned constitutes a good exogenous factor determining occupational choice Value of assets, other than land, is also used as a proxy for income not earned in the current period However, this is more likely to have been acquired by the individual and therefore a less appropriate proxy for non-earned income

Regarding choice of the sector of activity, asset ownership directly influences the decision Land ownership should encourage agricultural activity and business assets other than land and related agricultural activity. Among self employed workers one reason for engaging in a second activity may be a constraint of physical capital on expanding the first activity. High value of physical assets may encourage specialisation in one activity by relaxing the capital constraint and also by reducing the need for a second economic activity.

The external regional factors enumerated are used to proxy for the availability of job opportunities in the region. These are clearly exogenously determined factors influencing the occupational choice model Closeness to a town would encourage non-agricultural activity by creating opportunities for such employment Pressure of population in the village is expected to encourage non-agricultural employment by creating a demand for such activity Ceteris paribus, regions with higher population density may provide a viable market for certain non-agricultural activities

The average agricultural wage is taken as a proxy for the average village wage Unfortunately we do not have data on non-agricultural wages. Relatively well-developed villages are likely to have a higher village wage. Higher incomes from activities in such villages may reduce the need for a second activity. Non-agricultural job opportunities may also be relatively greater in better developed villages due to availability of infrastructural facilities and greater demand for non-agricultural goods and services arising from higher income levels.

The sample means of the explanatory variables used in the model are presented in Table 8 by sex and alternate employment

Note M - Male, F - Female

status groups. The occupational choice model is estimated as a multinomial logit model which assumes that the error components have independent and Weibull distributions <sup>8</sup>. The probability that the i<sup>th</sup> individual chooses the j<sup>th</sup> activity status reduces to

$$P_{ij} = \frac{\exp(\beta_j | X_i)}{\sum_{k \in j} \exp(\beta_k | X_i)}$$

For comparison of the empirical results the marginal effects or partial derivatives are computed. The partial derivative indicates the impact of the independent variable X on the probability of choice j

$$\frac{\delta P_i}{\delta X}$$

where j indicates the activity choices and k the elements of the independent variable vector X. These measures satisfy

$$\frac{\delta P_{j}}{\delta X_{k}} = 0$$

The direction and strength of the relationship between the occupational choice and the independent variables are indicated by the  $\beta$ -coefficients. The simultaneous impact of independent variables on the probabilities of the distinct choices is given by the derivatives. It may be noted that the sign of the derivatives can be different from that of the  $\beta$ -coefficients

#### DETERMINANTS OF OCCUPATIONAL CHOICE

The results of the multinomial logit model are presented in Tables 9 and 10 for men and Tables 11 and 12 for women. The model consists of five choices as described earlier The choice of sector of activity (agriculture/ non-agriculture) is split into the individual undertaking only one or more than one economic activity. The choice of not working is omitted as a reference category to identify the model 'Fach column of coefficients in Tables 9 and 11 shows the effect of the regressors on the utility of the state (occupational choice) under consideration relating to the utility of the reference state (not working) To assess the simultaneous effect of the regressor variables on the probabilities of the five distinct choices one should turn to the marginal effects reported in Tables 10 and 12

Besides the exogenous variables described earlier, the model includes three dummy variables to represent the sampling design. This is done in orde, to remove any bias of the design on the estimates of the model. To recall, the sample households were randomly picked in varying proportions after stratifying the households in the villages into four categories viz cultivator agricultural labourers household industry and other non agricultural activities. Three dummy variables representing the strata to which the

individual's household belongs are introduced in the model. Due to our interest in the growth of the non-agricultural sector, the primary choice in the model is taken to be the sector of activity. This choice is further split into undertaking only one or more than one economic activity.

Individual Characteristics Participation in economic activity declines with age irrespective of the choice of primary sector and number of economic activities when compared to the reference state of not working However, when the simultaneous impact of age on all the choices is studied,

Note Figures in parentheses are asymptotic t ratios. Non-participation is the residual choice

the marginal effects indicate that younger males are least likely to be engaged in only one agricultural activity or non-work. All other choices, agricultural activity together with a second activity and non-agricultural activities, with or without a second activity are associated with younger male workers.

The participation in any sector and the number of activities are similarly negatively associated with the level of education when compared to non-participation in economic activity. However, the marginal effects indicate a positive impact of education on participation in a single non-agricultural activity.

Household Characteristics The value land and other physical assets have an inverted U-shaped relationship with agricultural activity, irrespective of whether the individual undertakes a single or multiple activities. This relationship is however, not significant for males. The value of land variable has a significant inverted U shaped relationship with women engaged in agricultural activity along with a second activity. That is, women's participation in agriculture along with a second activity increases with value of land except at a very high value of land. Significant inverted U. shaped relationship with value of other assets is observed for women engaged in agriculture with or without a second activity

The simultaneous effect of the land variable on the five distinct choices is indicated by the marginal effects. Multiple economic activities among both primarily agricultural and non-agricultural male workers are higher at a smaller value of land and other assets A higher value of land and other assets appears to encourage specialisation in nonagricultural activity among individual males Women's participation in agriculture with a second activity increases with value of land and other assets, except at a very high value of land and assets. Women's participation in only one non agricultural activity is encouraged by a higher value of other assets. Thus, a very high value of land and asset encourages investment and specialisation in non agricultural activity

I sternal Regional Factors. The density of population in the village is used here as a proxy for opportunities for non-agricultural employment which are crucially dependent on market size. High population pressure on land also limits the number of workers able to survive on agricultural activities. It has an interesting differential impact on the work participation of men and women.

The density of population positively and significantly influences men's participation in only one non-agricultural activity when compared to non-work (Table 9) as well as in relation to other choices (Table 10) Women's participation in a second activity is significantly neg itively influenced by the

density of population in the agricultural and non-agricultural sectors as compared to non-participation (Table 11) and in relation to the other choices (Table 12). We may infer that the men are able to specialise in a non agricultural activity in densely populated areas. Women on the other hand, retrain from a second activity.

To capture the impact of access to and availability of employment opportunities distance of the village from the nearby town is included in the analysis. A greater distance from town encouraged agricultural and multiple activities among men and women. In remote villages, opportunities for non agricultural employment are likely to be minimal. The multiple activities engaged in may be a response to uncertain and low incomes derived from the agricultural activities in these regions.

A higher village wage tends to reduce the chances of a second activity irrespective of the sector of primary activity among both men and women. As suggested earlier, the village wage perhaps captures better developed villages where income levels are in general higher. That is, therefore, likely to reduce the need for a second job and allow specialisation in one activity.

#### CONCLUSIONS

A number of studies have tried to explain the growth of non-agricultural employment at the regional level. In this paper an attempt is made to view the problem from the perspective of an individual worker in a rural household. Within this framework, the individual simultaneously decides

- (a) whether to participate in economic
- (b) if so the primary sector of activity agriculture or non agriculture and
- (c) the number of economic activities to undertake

These decisions are guided by certain exogeneous constraints such as his individual characteristics, household asset structure and regional job opportunities

In the macro context, the process of diversification of the employment structure or growth of non agricultural employment can be analysed as consisting of two components (1) new entrants to the labour force entering the non agricultural sector and (2) a shift of workers from agriculture to non agriculture. The earlier mentionec studies have not generally differentiated between the two. In the micro context divers fication of economic activity by ar individual worker/household can be analysec as (1) an occupational shift from one secto: to the other over a period of time and (2) participation in more than one economic activity in either sector if a point in time The data set available to me is for only one point in time. Hence in this paper. I have analysed the determinants of economic activities in this context

Notes: 1 Significant at 1 per cent level; 2 Significant at 5 per cent level. Figures in parentheses are asymptotic t-ratios.

About 75 per cent of the households in our survey indicated diversification of their income portfolios at the household level. Households primarily dependent on agriculture for their livelihood were more likely to diversify their activities. It was also observed that access to land was a major factor facilitating this process. Almost all landed households (94 per cent) undertook a subsidiary activity, whereas only about 56 per cent of landless households did so.<sup>10</sup>

Such diversification of economic activities at the household level was found to occur through two processes. The household may diversify its activities by allocating the time of different members of the family to different activities. And/or it may do so by each member of the household undertaking more than one economic activity. In this paper we analyse the determinants of the second type of process.

According to the model, while older men tend to specialise in agricultural activities, better educated men specialise in nonagricultural activities. Men in households with a very high value of land and other assets also have a higher probability of specialising in non-agricultural activities. It is possible that better endowed households can diversify its household portfolio through educating its men folk who then undertake regular salaried employment. Specialisation in one non-agricultural activity is also encouraged by external regional factors such as a higher population density, closeness to town and in better developed villages.

Diversification, in terms of multiple activities per worker is encouraged by access to land, except at a very high value of land and other assets. Younger and less educated men and women also engaged in multiple activities. The probability of agricultural workers undertaking multiple activities is higher with greater distance of the village from a nearby town.

In conclusion, the chances of diversification into more than one economic activity are higher among agricultural households and individual agricultural workers. Access to land facilitates this process. Seasonality in agriculture, uncertainty and risks in production also create a greater need to diversify. In far away and less developed villages diversification is likely to be due to low and uncertain incomes from one economic activity.

#### Notes

(This is a revised version of a chapter contributed to the project report on 'Non-Agricultural Employment in Rural Gujarat: Patterns and Trends', sponsored by the Industrial Development Bank of India. I am grateful to the IDBI and the Gujarat Institute of Development Research for providing financial supportand research facilities. I also thank the faculty and staff of the GIDR

environment.)

- 8 G S Maddala, Limited Dependent und Qualitative Variables in Econometrics, Cambridge University Press, 1983. The weakness of the multinomial logit model is that the probability of any pair of states depends exclusively on characteristics of the two states concerned, and is independent of the number and nature of all other states that are simultaneously considered. The odds ratio is therefore not affected by the addition or deletion of an alternative. This property is known as independence from irrelevant alternatives (IIA). See J S Cramer, An Introduction to the Logit Model for Economists, Edward Arnold, Hodder and Stoughton Limited, UK, 1991.

It is possible to statistically test for the independence of these states in the following way. If the original model had two choices or two states, at each stage (each new model)

state j. This will always lead to an extended model with (j+1) states, two new states j, and j, being substituted for j. If the new distinction is arbitrary and irrelevant then j, and j, have the same regressor coefficients, which are those of their parent state; but their intercepts differ. See J S Cramer and G Ridder, 'Pooling States in the Multinomial Logit Model', Journal of Econometrics, 47, 1991, pp 267-72

To test for the pooling of states for each new logit model we therefore need to test for the equality of their logit regressor coefficient apart from the intercept. This can be done with a likelihood ratio test. The null hypothesis is that

The test statistic is,

$$LR = 2 \{Log L - Log L_u\}$$

where  $\log L$  is the maximum  $\log$  likelihood of the original model and  $L_k$  the maximum  $\log$  likelihood if the estimates are constrained as in the null hyppothesis. LR is distributed as a chi-square variate with k degrees of

implied by the null hypothesis. Log L is readily available, but L<sub>R</sub> requires constrained estimation which is laborious. However, Cramer and Ridder (1991) present a simple method to compute it and a complete description of the above methodology.

9 To test for the relevance of the new set of alternatives the null hypothesis is:
β agriculture, one job = β agriculture, two jobs and
β non-agriculture, one job = β non-agriculture, two jobs.
The test statistic, at 1 per cent level of

The test statistic, at 1 per cent level of significance, is a value of 45.6 with 26 degrees of freedom. The LR statistic constructed for the model is presented in Tables 9 and 11.

The LR statistic is clearly above the critical level in all cases and the null hypothesis is rejected. Thus the model, splitting the primary choice further into number of activities undertaken is a statistically valid specification.

**APPOINTMENTS** 

## SIHEW

# STATE INSTITUTE OF HEALTH & FAMILY WELFARE, RAJASTHAN

**JAIPUR** 

#### OFFER OF ASSIGNMENTS

The SIHFW has been established by the Government of Rajasthan as an apex level autonomous institution through a registered society.

The aim of the Institute is to contribute to the total effectiveness of the health system through improved management at different levels. For this, the SIHFW organizes training programmes, undertakes operational and applied research in management, and provides management consultancy in the health system.

The Institute requires six Professors/Associate Professors in the specialities of (i) Community Health, (ii) Communication & Social Marketing and, (iii) Organization Development/HRD.

The qualifications and experience prescribed for the above posts alongwith the prescribed application form, may be obtained either by post or personally from the Registrar of the Institute.

Last date of receipt of applications has been fixed as 14-9-96, which should be sent to the Director, S.I.H.F.W, HCM RIPA (O.T.S), J.L.N. Marg, Jaipur - 302 017.

Jaipur,

Dated: 10.08.1996.

DIRECTOR.

Shri Mantosh Sondhi

#### Ladies and Gentlemen

On behalf of the Board of Directors and on my own behalf, I extend to you all a very warm and cordial welcome to the 7th Annual General Meeting of your Company. The Notice convening the meeting, the Directors' Report and the Audited Accounts for the year ended March 31, 1996 have been with you for some time new and with your permission, I shall take them as read.

#### The Economy

May I now say a few words about the economy. The economic parameters for 1995-96 on all fronts indicate high growth. GDP grew at the rate of 7 per cent, higher than expected. Industrial growth at 12 per cent has been very assuring. Government revenue both from direct and indirect taxes has exceeded the budgetary estimates, due to buoyancy in the economy and better tax compliance at lower rates of taxes. Exports also registered a satisfactory growth rate of slightly more than 21 per cent in Dollar terms. Performance of the corporate sector has also been excellent. There are, however, certain areas of weakness and concern, more particularly the sluggish growth of the agriculture sector at 0.9 per cent, high fiscal deficit and abysmally poor state of the intrastructure sector. High interest rates, liquidity crunch, trade deficit and control on government expenditure are other areas which need urgent attention, if 7 per cent GDP growth and a fiscal deficit target of 5 per cent on a diminishing basis, as perceived by the new Government. have to be achieved and sustained.

We are also facing for decades problems of social infrastructure, unemployment and poverty which can only be ignored at our own peril. It is heartening to find that realising the gravity of the situation, the Finance Minister in his budget proposals has proposed definite measures to encourage rural development, faster growth of infrastructure through allocation of larger resources, introduction of tax incentive and creation of new institutions, these are all steps in the right direction. Other main highlights of the budget are imposition of 12 per cent minimum alternate tax (MAT), reduction in the 15 per cent surcharge on corporate tax to ~.5 rer cent and the introduction of non-voting shares.

In this connection there is also an urgent need to review various economic and other laws which have become totally archaic and outdated, these hinder

## Speech by Shri Mantosh Sondhi, Chairman at the Annual General Meeting of the Company held on August 14, 1996 at New Delhi

development. A good example of this is the Urban Land (Ceiling & Regulation) Act. All these should be modified or scrapped.

In my view, taking the political compulsions into account, 1996 - budget is a remarkable feat of skill and courage. As the London Economist points out, "The Finance Minister had to keep his political allies on board while preserving the direction of reform". This he has been able to achieve with a great deal of success although the time at his disposal to make far-reaching policy statements was extremely short, a mere 35 days.

Admittedly, there are some areas of disappointment. The Insurance Sector has not been deregulated as was generally expected. This sector has been protected from competition for a long time and although one must admit that the financial performance of the nationalised Insurance Sector has been reasonable, better than some of the allied sectors such as banking, time has now come when it must be thrown open to the private sector to make it more competitive. The latest portents are that this may happen in a phased time frame.

While on this subject it must also be stated that the Finance Minister has been very wise in not denouncing the excellent work done by his predecessor, which unfortunately had become a practice very prevalent in Indian politics and bureaucracy.

#### **Review of Operations**

During the year ended March 31, 1996, sales of your Company at Rs. 590.24 crores were a little lower compared to sales of Rs. 607.99 crores in the previous year due to suspension of trading of DAP because of wide fluctuations in the foreign exchange and high international prices. However, despite the fall in the turnover, the gross profit rose by 42% to Rs. 60.89 crores from Rs. 43.01 crores. The net profit also went up by 45% to Rs. 41.79 crores as compared to Rs. 28.73 crores in 1994-95. All the units performed well and contributed towards this excellent performance. To share with you the fruits of better results, your Board of Directors have recommended a higher total dividend of 40% on enlarged equity capital. Out of this, your Directors have already paid an interim dividend of 15% during the financial year under review.

#### A. Fertilisers

During the year, the operations of this Division were satisfactory. Unfortunately various claims for price escalation are still pending with the Fertiliser Industry Coordination Committee for settlement. Also there has been inordinate delay in the disbursement of the subsidy. This has adversely affected the cash flow and consequently the profits of this Division.

#### **B. Plastics & Chemicals**

Working of the PVC plant was satisfactory. Due to fall in international prices, the PVC prices remained depressed. The technical tie-up with M/s. Zeon Kasei Co. Ltd. of Japan has helped in improving quality of PVC compounds,

SHRIRAM UREA . SHRIRAM CEMENT . PVC RESIN 8

and consequently profitability of this business has improved.

Production and profitability of caustic soda and chlorine plants at Kota was adversely affected due to a fire, which broke out in the Rectifier/Transformer installation in April, 1995. The claim lodged with the Insurance company was settled and damaged equipment replaced. The plant is now : unning satisfactorily. Across-the-board cut in import duties for a number of industries, including plastics and chemicals proposed in the Finance Bill, 1996, will put these operations to greater foreign competition.

#### Power

Commissioning of an additional 30 MW power plant at the Kota complex was successfully completed during the year. The operations of the plant have been fully stabilised and significant cost savings were achieved during 1995-96, the first full year of the operations for this plant. You will be glad to note that the plant is performing extremely well and is operating over 90% P.L.F. against an average of 63% for the country as a whole.

#### ). Cement

During the year, profitability from operations of the unit significantly improved The Company's product continue to command premium prices in the market. Due to commissioning of new large capacities in Northern India, the selling prices may come under pressure

#### E. New Plant - Shriram Alkali and Chemicals

It is a matter of great pride that your company during the year has added a modernised chlor-alkali plant at Jhagadia, Distt. Bharuch, Gujarat into its operations. The new Chlor-alkali Plant 'Shriram Alkali & Chemicals' was recently partially commissioned in a record time of 13 months from ground breaking Using the latest membrane cell technology from M/s Asahi Chemicals, Japan, the Plant has a capacity of 50,000 tons/annum of Caustic Soda and 44,000 tons/annum of Chlorine and places your Company amongst the top 5 producers of Chlor-alkali products in the country. The investment on the total project is around Rs 200 crores. Operations of the plant are in the process of being stabilised and are expected to provide strong earning growth, in the coming years. By December, 1996, a state-of-the-art flaker plant of 33,000 tons/annum capacity is also expected to be commissioned. The flaker plant, based on BERTRAM technology, would provide an excellent window for exports.

#### . Textiles

There has been considerable improvement in textile operations with much lower losses

As you all are aware, the Supreme Court had sometime back directed the Central Pollution Control Board to issue notices to certain industries to stop functioning in the city of Delhi as per the provisions of Master Plan -2001 and be relocated outside Delhi. Swatantra Bharat Mills and DCM Silk Mills Units were also issued these notices. As per the latest directives of the Supreme Court, these units cannot operate at their existing site beyond 30th November. 1996. The Company is examining options with regard to relocation and is formulating action plans.

#### Environment

Shriram Environment & Allied Services at Kota, recognised by the Department of Science & Technology, set up to carry out research and development work in the ield of environment continues to do well.

#### **Subsidiary Companies**

DCM Shriram Credit And Investments Ltd. (DSCIL), wholly owned subsidiary of rour Company is doing well. In the case of other subsidiary, DCM Shriram Aqua Foods Ltd. (DSAFL), the aquaculture project at Karaikal, Pondicherry continues to see on hold on account of Interim Order of the Supreme Court against a Public interest litigation filed with them.

#### **New Business Development**

Your Management is actively pursuing opportunities for diversification into new business area of Sugar and for bigger thrust into areas of Power and Cement The Company is progressing with its plans for setting up a 3125 TCD Sugar Project in the State of Uttar Pradesh. Discussions are on for implementation of the Project The project is proposed to be located in an area with excellent cane availability to enable rapid expansion.

The Company is continuing its efforts in the area of independent power generation business in Rajasthan, Madhya Pradesh, Gujarat and Punjab Due to various procedural constraints and lack of clear cut policies from the Govt, these projects are taking longer than anticipated. Your Company has now attained a great deal of expertise in the maintenance and operation of power plants. We wish to take advantage of this and put this expertise to effective use in the future.

Further, the Company is expecting a prospecting license for lime stone in Rajasthan The necessary recommendations from the Central and State Governments have already been received. Depending upon the quality of lime stone and deposit estimates, it is planned to set up a grass root cement plant with a capacity of approx 1 3 million tons/annum, which would significantly help in consolidating our position in the industry. Looking at the cement industry from a long term perspective, it has a very promising future with the present emphasis on rural housing and infrastructure development.

These projects would help in achieving sustained growth and all our stock holders can look forward to better times in the future.

#### Industrial Relations

The Company continued to maintain harmonious and cordial relations with its workers in all its divisions, which enabled it to achieve higher performance levels on all fronts.

#### **Human Resource Development**

The progress of the Company during the last 6 years is in a large measure due to the quality of our human resources. New challenges and additional responsibilities have been accepted by one and all with a great deal of enthusiasm and with a full sense of commitment. Human Resource. Development in your Company continues to receive high priority. Training inputs are being provided to employees at all levels.

#### **Prospects for the Current Year**

In the first three months of the current financial year i.e. April to June, 1996, sales of your. Company at Rs. 135.93 crores are lower as compared to sales of Rs. 141.70 crores in the previous year due to planned maintenance shut down of the fertiliser plant in April, 1996. Substantial reduction in import duties on plastics and chemicals, proposed in the Finance Bill 1996, may impact the profitability of these products. However, your company is fully geared to meet increased competition and pressure on margins through the introduction of effective cost rationalisation and plant re-engineering exercises. The Company is quite hopeful that overall, the current year should end on a satisfactory note.

#### Acknowledgements

Ladies and Gentlemen, in conclusion, I would like to compliment the Management Team of your Company led by Shri Ajay S. Shriram and Shri Vikram S. Shriram for their excellent performance. The Directors also wish to thank the Government authorities, financial institutions, bankers, business associates and shareholders for their co-operation and support extended to the Company. The Directors also place on record their deep appreciation for the contributions made by employees at all levels to improve the working of the Company. Thank you.

Note. This does not purport to be a record of the proceedings of the Annual General Meeting

# **Privatisation of Commons for the Poor**

## **Emergence of New Agrarian Issues**

#### Milind S Bokil

In the literature on common property resources (CPRs) privatisation is often decried on the ground that it deprives the rural poor from a critical source of livelihood and only benefits the rich and powerful sections of society. The problem, however, gets complicated when the poor themselves encroach upon the commons for their livelihood needs. Such a situation has arisen in the Marathwada region of Maharashtra where the dalits have encroached upon the village common lands to establish ownership. A number of important agrarian issues arises in this context.

AN important agrarian issue in countries like India, where rural poverty is directly related to agricultural backwardness, is how do the poor secure their livelihood? The corollaries are, how do they establish access to important agricultural resources like land, water and trees and what strategies are adopted by them to retain the control? What are the consequences of their actions in terms of agrarian social relationships? What effects do changing environment and state policies have upon them? And so on.

An important characteristic of poor people in backward countries is that they are resource-less or resource-poor. In hierarchically organised societies like India they also belong to the low ranking castes. There is therefore a continuous striving on their part to acquire those crucial resources which will help them to secure their livelihood In the traditional rural societies the poor have been often found to depend upon what is called as common property resources (CPRs). However, the CPRs are rapidly declining in terms of both quantity and quality. A variety of factors like growth in population, over-exploitation, ecological degradation, state intervention and commercialisation have been found responsible for their depletion. In the literature on CPRs, privatisation is often decried on the ground that it deprives the rural poor from a critical source of livelihood and only benefits the rich and powerful sections of the society. A strong case is made against private industries to whom vast tracts of commons are granted for captive cultivation. The usual appeal is to halt the process of privatisation and retain the commons as commons.

The problem gets complicated when the poor themselves encroach upon the commons and attempt privatisation for their livelihood interests. Such a complex situation has presently arisen in the Marathwada region of Maharashtra. Here, dalits have encroached upon the village common lands to establish private on nership and from time to time their encroachments have been regularised by the state government. This process has

given rise to a number of important agrarian issues. The study is an attempt to analyse some of them.

#### COMMON GRAZING LANDS

Grazing lands called as 'gairans' in the vernacular is a common feature of villages in Maharashtra. Gairan literally means 'cowland' (gai = cow, ran = land). These are common lands signifying open access common property resource. The extent of gairans all over Marathwada is 2,40,800 habelonging to 7,786 villages. Thus each village has on an average about 30 ha of gairan. There are, of course, significant variations following the habitat, topography, size and population of the village as well as a number of historical and socio-political factors. The control and management of the gairans is vested with the gram panchayats.

Within a village there are other types of common lands also. These are classified as barren and uncultivable land, culturable waste, land put to non-agricultural use, and so on. Excepting the categories where the ownership is otherwise defined all the common lands are owned by the government and administered by the revenue department. The local people usually have usufructuary rights over them. Besides, there are forest lands also. In Marathwada, their extent is very small and they are greatly degraded (Tables 1, 2). The proportion of common lands to the total geographical area ranges from 9 per cent to 25 per cent in the seven districts of Marathwada with about 145 ha of common lands per village. This, however, also includes the land put to nonagricultural use, i.e. land under roads, buildings, playgrounds, funeral and burial grounds, etc. If these are excluded, then the proportion of commons would range from 5.9 per cent in Beed to 21.65 per cent in Osmanabad (about 115 ha per village). The proportion of garrans to total commons ranges from about 12 per cent in Latur to 36 per cent in Beed (about 30 ha per village).1

A large body of literature on utilisation of common lands in India has accumulated

in the last 10 years. This literature emphasises that the common lands satisfy a great deal of bio-mass needs of the villagers and it has been strongly reiterated that they are useful to the rural poor who cannot afford to pay for their bio-mass needs.<sup>2</sup>

In earlier times the gairans of Marathwada were no exception to this. But at present they are so degraded that they hardly satisfy any livelihood needs. They are used only as grazing lands and that too during the rainy season. Secondly, unlike the state of Rajasthan their extent is quite limited (about 30 ha per village) This being a dry region they are also subjected to the vagaries of monsoon. Hence neither the quantity nor the quality of grass is significant enough. The principal means for grazing are still the private lands which become tree after the first and the only crop is over. Then on, there are no restrictions on grazing and the cattle graze freely on the crop stubble. This is symptomatic of the semi-arid regions in general where a significant percentage of villages depend primarily on rain-fed agricultural crops and are less dependent on CPRs [Arnold and Stewart 1991:8]. There is a generic term for this phenomenon in Marathwada as 'ran sutya zalya' meaning lands have become free.

Encroachments over public lands is not a novel phenomenon, either in the country or in Maharashtra. Public lands being nobody's property have been encroached whenever suitable opportunities existed. In Maharashtra, the encroachments have a particular history though the trends are similar to those found in the country. Here, encroachments were primarily made by the tribals residing in the mountainous and forest areas. In rural area this trend was followed by dalits and other landless sections.

Among the ex-untouchables, the mahars (and neo-Buddhists) are relatively advanced. In the traditional village society they were village servants (watandars or balutedars). They performed a number of duties and were compensated either in kind (baluta) or through a grant of land (watan). The practice of mahar watans was continued by the British

along with the other watans granted to village accountants, clerks, revenue collectors, etc. A prominent feature of the watan lands was that they were inalienable and only hereditary transfer could take place. After independence the watans were abolished by the state government as the traditional services had become redundant. This was also a demand of the mahar leaders as the watans perpetuated social servitude and bondage. When the watans were abolished the previous holders were given an option to repurchase the land by paying the charge prescribed by the government (called as 'nazarana' - usually a multiple of the annual cess). Most of the superior watan lands were therefore, retained by their holders but the mahars could not take advantage of this fact because of illiteracy, ignorance and absence of proper records. Those who could do so received only a fraction of the total land as by then the watan land was fragmented due to successive partitions. As village servants the mahars were compensated in kind and hence had never taken to farming seriously. The fractional and uneconomic holdings further discouraged them from doing so. Their uncaring and parasitical lifestyle formed over centuries also came in their way. As a result the watan lands were soon mortgaged to upper caste landlords and moneylenders. For all practical purposes the mahars lived as landless labourers. The other sections of dalits, particularly the Mangs, had traditionally not owned the land and had lived mostly as bonded labourers. This practice was widely prevalent in Marathwada because of the feudal setting. According to a survey of dalits undertaken in Maharashtra, the proportion of landless dalits in Marathwada ranged from 85 to 90 per cent [Gare and Limaye, 1973].

In other parts of Maharashtra the encroachers on common lands belonged to various communities including the dominant upper castes. But in Marathwada the proportion of dalits has been higher. The most prominent reason behind why dalits started encroaching is this factor of landlessness. The other landowning castes in Marathwada have not felt the need to resort to encroachments. The main agriculturist castes like maratha and lingayats have sizable landholdings whereas brahmins, marwadis and dhanagars have not been interested in farming. The latter have also not been as localised as the dalits. After marathas it has been only dalits who had traditional skills and experience in farming as they worked as agricultural labourers once the traditional duties were abolished.

The usual motive behind any encroachment on common land is to bring the land under cultivation and increase the food security of the household. In the present

case another motive has been operational as well: earning a better social status. It has been a common feature of backward societies that social status is equated to ownership of land. Throughout the past, the dalits literally lived at the mercy of the landowning upper castes. Even when they had watan lands it was more a form of obligation than a piece of property. To own land and to be on par with other agriculturist sections of the village has been a constant obsession with the dalits.

In order to achieve this a quiet social action was pursued since the 1950s. This action was a part of the wider dalit or backward class movement. The dalit movement in India has been considered as an important expression of protest and change. The major thrust for this movement came from Maharashtra since Babasaheb

Ambedkar was instrumental in organising and mobilising the depressed classes (in Maharashtra the movement is often termed as Ambedkar movement). It has been noticed by scholars studying this movement that 'dalit consciousness is a complex and compound consciousness which is a product of inhuman conditions of material existence, powerlessness and ideological hegemony' and the response pattern has been first to rise against the socio-cultural oppression (social reforms movement); secondly, to strive for political disenfranchisement and thirdly, to bargain for better economic conditions [Oommen 1990:255].

It has been also observed in the case of the backward class movements that these movements passed through two stages: in the first, the low castes concentrated on acquiring the symbols of high status whereas

in the second the emphasis shifted from the symbols to the real sources of high status, i e, possession of political power, education and a share in the new economic opportunities [Sriniwas 1991:319]. In this regard, among all the scheduled castes of India, the mahars of Maharashtra have been particularly dynamic and effective as they used political means most consistently and unitedly in their attempt to better their economic condition [Zelliot 1992:86]. Being traditionally involved in the village system the mahars were more attached to the land (despite urban shifts) and always came back to their villages. When some advances were made in removing the stigma of untouchability and when they emerged as a vote-bank in the political sphere, the next logical step was to establish control over productive resources. Encroachments on public lands was the direct outcome of this aspiration.

The most characteristic feature of the encroachments has been that mainly gairans were encroached. It can be seen from Table 4 that of the total 28,902 ha of public lands regularised in Marathwada, 28,874 ha were gairans (99.9 percent). The extent of revenue and other lands has also been significant in this region but mainly gairans have been targeted. This happened because gairans were being controlled by the village gram panchayat which has been a weak political body compared to the organised revenue or forest departments. Traditional village authority was strong but when it was replaced with elected representatives its character was altered. Though the encroachments by dalits were later resisted, in the initial years the gram panchayats did not take a strong view. They also did not have any judicial powers. In many cases the village level power equations were taken advantage of. For the encroachers, it was both a means of securing livelihood as well as an act of defiance.

#### PRIVATISATION OF GAIRANS

As mentioned earlier encroachments on public lands have been occurring steadily over the past 40 years. Though it is a punishable offence under the Maharashtra Land Revenue Code, the attitude of the revenue administration has never been uniform. It has been tinted with anomaly. ambiguity, indifference, favouritism, inefficiency, laxity as well as corruption. When the 'Grow More Food' campaign was popularised in the 1950s and early 1960s a lenient view of the encroachments was taken. Afterwards also encroachments were tolerated for a number of years and then suddenly noticed and evicted. On many occasions the local revenue officials took bribes and turned a blind eye towards the encroachments. Such bribes had been a good source of extra income for the officials. Excepting the years 1974-76 when internal emergency was imposed in the country, the government never took clear position against the encroachments. The elected representatives generally adopted a populist stance and the encroachments were regularised from time to time.

After emergency, the then progressive leftist state government regularised the encroachments on a wide scale [Revenue and Forest Department GR/1078/3483-42 dated December 27, 1978]. Though this was termed as a progressive legislation, there were a number of flaws. It was subsequently amended on September 12, 1979 by another GR (No.FLD 1079/1366-F3) which regularised the encroachments from April 1, 1972 to March 31, 1978. The most salient feature of this GR was that it prescribed eligibility criteria for regularisation and thereby sought to regularise the encroachments only of the weaker sections. Its provisions read as follows

All subsisting encroachments on government waste lands, gairan lands, revenue forest land and forest lands in charge of the Forest Departments made for cultivation which existed on 31st March 1978 should be regularised. Provided:

- (i) The encroacher is -
  - (a) a person belonging to backward class that is scheduled castes, scheduled tribes, nomadic tribes, vimukta jatis or neo-buddhist, or
  - (b) a person whose total annual income including the income of members of his family does not exceed Rs 3,600.
- (ii) The usual place of residence of the encroacher is within the radius of eight kilometres from the land encroached upon,
- (iii) The encroacher is a landless person or the total land lawfully held by him in any capacity is less than two hectares of jirayat land, and
- (iv) The encroachment to the extent of an area equal to 2 ha of jirayat land shall only be regularised. Where the encroacher is holding some jirayat land either as owner or in any other capacity the regularisation shall be limited to such areas as would bring his such landholding equal to 2 ha of jirayat land

A number of action groups/non-governmental organisations/ voluntary agencies which were active in getting the encroachments regularised strove for its implementation and though numerous difficulties and obstacles were encountered more than 5,000 cases were regularised in the subsequent years. While enacting this GR the government declared that henceforth no encroachment in whatsoever form would be regularised and attempts to do so would be sternly dealt with.

However, the tempo of encroachments did not stop. In fact, in certain areas where common lands were still vacant, more encroachments were made. These were overtly supported by the organisations of dalits and other activist groups. The instability and weakness of the state government in the late 1980s was also taken advantage of. As a result, the government once again passed a resolution in 1991 regularising the encroachments of 84,230 persons on 1,08,915 hectares of government waste lands and gairan lands (No LEN 1090/ 172/1 dt November 28, 1991). In its content this GR was similar to the 1979 GR as it specified the eligibility criteria for regularisation. But a notable thing was that for the first time it provided the statistics collected in various district headquarters. The GR however did not regularise the encroachments over the forest lands as the state government did not have the authority to do so (following the Forest Act of 1980 these powers have been vested with the union government).

The most serious implication of privatisation of gairans has been in terms of the social conflict generated in Marathwada. This region, which was under the dominion of the nizam of Hyderabad till 1950, has been predominantly rural and agricultural and the society has been characterised by feudal and hierarchical caste relations. In the past, i.e., before 1979 encroachments on gairans were treated with indifference but after the issue of renaming the Marathwads University the situation altered. For a number of years the dalits in Marathwada were demanding to rename the Marathwads University (campus at Aurangabad) after their leader Babasaheb Ambedkar as a tribute to his contribution to Marathwada and as a symbol of social equality. This was accepted by the then state government (led by the Progressive Democratic Front, a combine of leftist and secularist parties) in 1978 and a resolution to that effect was passed in the Legislative Assembly. However, this decision could not be implemented because the non-dalit organisations, rightist association and even the neutral educational bodies protested strongly. It was argued by then that the term Marathwada was a matter o cultural identity and hence the name should not be changed. On the other hand the progressive and leftist organisations launched a movement for enactment of the governmen decision and hundreds of activists courter arrests on a number of occasions. Both the parties made this issue a matter of prestige The resulting confrontation assumed a blood form in 1979-1980 and large scale violence against dalits erupted in Marathwada. In

many villages the dalits were beaten to death and their houses and property were burnt to ashes.

This intense and widespread expression of anger against dalits was an unprecedented event in the history of Marathwada. Caste hierarchy and the notion of superiority among the upper castes and subsequent ill treatment to dalits were prevalent but the kind of caste conflict witnessed during the riots was unheard of. A number of reasons were responsible to this. There was a general feeling of resentment against the dalits because of the policy of reservations in government service and educational institutions. This was fuelled by the frustrations experienced by the unemployed youth of the middle and upper castes. It was conveniently believed that the root cause of unemployment was the preferential treatment granted to dalits. The abandonment of traditional lowly duties like scavenging, carrying dead animals, tanning hides, running errands, etc. had previously put the villagers to inconvenience. The political mobilisation of dalits and the assertion of equality by their militant organisations were annoying to the feudal psyche of Marathwada villagers. As a result, there was a widespread feeling to 'teach a lesson' to dalits.

These events coincided with the regularisation of encroachments (the GR of 1979) and the phenomenon which was till then neglected or tolerated suddenly came to the fore. The encroachments over common lands provided a concrete opportunity to the village upper castes to give vent to their anger Dalit families were physically beaten and evicted from the gairans, their crops were destroyed and stocks were razed to ground. In many villages where there was no other issue of discontent, regularisation of encroachments created the conflict. Though the administration took quick steps to ensure law and order and in some cases the rioters were punished, dalits suffered great losses and more misery was added to their life.

The situation cooled down afterwards but the renaming could not be performed till 1993. In the meanwhile another GR was passed (1991) and encroachments were further regularised. However, this decision did not cause the same degree of tension as the earlier one. By then the local villagers had accepted the fact that the government was in favour of the dalits and would take a pro-poor and populist stance in order to win over the backward classes. The university was renamed on December 6, 1993. It was thought that this decision would cause fresh riots but the government maintained strict vigil and enforced law and order. Excepting a few sporadic instances, the situation remained under control

Though the 1991 GR regularised a large number of encroachments, the problem was not solved in its entirety. In the first place the statistics collected by the revenue department was erroneous as it did not correctly enumerate all the encroachers. In many villages only a section of them was benefited, the encroachments of the others were not recognised. This fact created a great degree of anomaly and disparity among the encroachers. Secondly, though land grant certificates were issued this step was not followed with measurement and demarcation of the plots. Thus, in almost all the villages the beneficiaries were uncertain about the exact location of their plot and cultivated the same piece which was in their custody. The lack of demarcation created the obvious problems of equity as some of the encroachers had retained bigger plots than two hectares. Thirdly, though encroachments were regularised the criminal and civil suits filed against the dalits at various levels were not automatically withdrawn. This factor caused considerable harassment to the beneficiaries even after 1992. Finally, though lands were granted to provide a source of livelihood, the decision was not followed by appropriate arrangements of credit, agricultural inputs and land development. As a result the beneficiaries could not take advantage of any of the agricultural development programmes.

This whole phenomenon of encroachment and regularisation has brought to the fore a number of important agrarian issues. These could be broadly classified as follows.

- (a) What is the outcome of this phenomenon in terms of agrarian relationships? In particular, what changes have been brought in the pattern of landownership as well as in the corresponding social relationships due to the creation of a class of small land owners from landless labourers.
- (b) How has this activity helped the poor in securing livelihood?
- (c) What has been the effect on the CPRs in land? What processes have been set in motion with regard to the sustenance and management of commons?
- (d) Could this be a strategy for poverty alleviation? Would it ensure equity, productivity and sustainability?
  - (e) What could be the alternatives?

In order to seek answers to these questions a study was conducted in Latur district of Marathwada in collaboration with a grass roots level organisation called 'Sarvangin Vikas Sanstha' (SVS - organisation for allround development). SVS was founded by a dalit activist (Tatya Kamble) and since its inception in 1984 had consistently worked on the issue of equality and social justice for dalits. It was one of those organisations

which had taken up the present cause but unlike the others had sustained its interest in resolving the issue.

The inquiry was conducted in 30 villages – selected randomly – of Udgir and Ahmadpur talukas. The tools of data collection included two proformas, one for the village and another for the individuals. Out of the total 366 beneficiaries from these villages, 260 beneficiaries (71 per cent) were contacted. Most of the qualitative information was, however, collected from informal discussions in each village with both beneficiaries as well as non-beneficiaries (Table 5).

As could be seen from Table 5, the number of beneficiaries varied from village to village. This number is not significant in comparison to the total size of the village but it assumes significance in terms of labour relationships. Almost all the beneficiaries were previously employed on the farms of the upper caste landowners. The peasantry in Marathwada could be broadly categorised in four classes; landlords, large land owners, middle peasants and small peasants (poor peasants with uneconomic holdings). The pattern of operational holdings in Latur district has been as in Table A.

This differentiation would roughly coincide with the categories mentioned above. Of these the first category could be kept aside as this is a class of the traditional landlords (deshmukhs) and who are present only in a few selected villages. They have preferred to operate in the larger political arena. It is the second category which mattered the most. Before the encroachments almost all the dalits used to be employed by the large landowners on annual bonds. This kind of labour relationship was dramatically altered once dalits started establishing access to land and began retaining those plots despite adverse socio-juridical conditions. It was

| Total           |                     |                                        | 5,425.00                           |
| Fodder          |                     |                                        | 2,000.00                           |

As we have seen earlier, privatisation of the common lands has certainly helped the beneficiaries to acquire a better food security. The important question is whether this could be treated as a potent means of poverty alleviation. After consolidating all the individual details it was found that though a relatively better food security was obtained it had not brought the beneficiaries above the poverty line.4 The poverty line in the present context (without getting into the complexities of its definition) is roughly the dividing line between employment and unemployment. If a person receives year round employment at the minimum wage rate, his/her family could be considered as above the line of absolute poverty during the year. This basic question has not been solved by the process of privatisation. As shown earlier, access to a piece of land has provided food security only for two to three months. For the remaining months the beneficiaries still had to search for wage employment. The poverty conditions have only been ameliorated and hence, in its present form, privatisation could not be considered as the most efficacious strategy for poverty eradication.

This has happened because the beneficiaries have to cultivate uneconomic holdings. The holdings have been uneconomic primarily because of (a) small size of the land, (b) dry land farming dependent upon the vagaries of monsoon, (c) lack of credit resulting into inadequate application of labour and inputs. (d) lack of basic agricultural assets like bullocks and implements, and (e) absence of improved methods of farming.

Any strategy in the backward economies, aiming at improving the livelihood of the poor, needs to consider three important aspects, namely, equity, productivity and sustainability. What is expected is that the benefits or gains should be equitably distributed, the strategy should ensure optimum productivity so as to become a viable proposition and it should be sustainable so as to permit continuation and growth.

If the present measure is assessed on these criteria, it could be seen that in the present form it does not satisfy any of these requirements. The question of equity has not been taken care of by privatisation as not all the dalits in any given village have been endowed with land. The cultivation of dry landholdings have not been productive due to the reasons mentioned above. Subsequently, this could not be termed as a sustainable strategy as it would soon become a loosing proposition. The danger of the commons getting lost in this process would also be apparent. The search for alternatives thus becomes necessary.

The search for alternatives needs to be carried out within the limits of two factors.

Firstly, the private property rights conferred upon the individuals would be irrevocable and secondly, individual small dry landholdings would be permanently unviable.

In such situations, the alternative adopted in the past has been that of joint or collective farming societies where the members pooled their lands together and practised collective cultivation. In India this measure was greatly propagated in the 1950s and early 1960s and a large number of such societies were established with active state support. Many of them were exclusively for the weaker sections. However, the single most conclusion of their performance has been that they have failed miserably. Barring a few exceptions the joint or collective farming societies have been unsuccessful because of the inherent problems of pooling the land together. labour participation, income distribution and in many cases the basic unviability of the proposal apart from the problems of weak member loyalty, lack of interest, dissension and disorganisation [Deshpande 1977]. The failures of the societies of the weaker sections have been particularly striking because of lack of institutional support, opposition from vested interests and absence of community spirit. In Maharashtra alone there were 327 joint and 892 collective farming societies in 1979. The number came down to 74 and 243, respectively, in 1987 [Commissioner for Co-operation, GOM, 1987].

If the land cannot be pooled together, the next alternative is to share other critical resources like water in a co-operative manner. The merit of a co-operative arrangement is that the members come together without sacrificing their individual or private interests. This institutional arrangement is more suitable in the present context. The scholars studying the institutional aspects of collective action have concluded that cooperative management of natural CPRs is the most appropriate of all forms of management in most situations [Singh and Ballabh 1992]. As for the cultural ethos Maharashtra offers the most conducive environment as there has been a longstanding and successful co-operative movement in the state.

The productivity of gairans has been low mainly because these are unirrigated lands. A variety of experiments in the semi-arid tropics have shown that annual precipitation as low as 500 mm could be effectively harnessed to satisfy local water requirements. The region under concern is more favourably placed as the average annual rainfall is around 800 mm. In comparison with the land sharing arrangements, those sharing water have been found to be more sustainable and efficacious. If proper

impounding and harvesting structures are undertaken then at least protective irrigation could be provided which would increase the productivity two to three times.

The productivity of gairans could also be increased if, along with cereal crops, a mix of trees, grasses, legumes, herbs and bushes could be grown. This was the produce the gairans used to yield earlier and their physical characteristics are extremely suitable for a combination of trees and grasses. It was noticed that agro-climatically fruit trees and orchards could be more favourably grown which would also have commercial value. In tropical countries agro-forestry has been found to be more beneficial than mere farming. While growing trees the problem of gestation period could be solved by assured wage-labour under the employment guarantee scheme (EGS). Since its inception in 1977, a massive public works programme was undertaken in Maharashtra which not only provided wage labour to millions of workers but also created capital assets like percolation tanks which helped in reducing the severity of drought conditions. The EGS in its current form has only been a lean season guarantee. This cover could be extended throughout the year.

Once an institutional arrangement is established (preferably for sharing water) then other crucial inputs like seeds, manures, fertilisers, insecticides, agricultural implements as well as agricultural expertise in production and marketing could be shared. This would not jeopardise the present private property foundation and would leave plenty of room for individual initiative and enterprise in a collective setting.

In practical terms this would mean that the privatised plots of gairans should be treated as 'Agro-Forestry Plots' granted to the members of weaker sections. With proper protection, conservation and regeneration these plots would yield much more than what the gairans used to yield earlier or what they are yielding at present. During the course of investigation a rough estimate was prepared for five villages and it was found that through this technique gairans could generate surplus bio-mass produce that could be shared with other members of the community. Thus the aspect of equity could be also taken care of. It was in fact realised that it would be possible to involve all the poor in such a sharing arrangement which would be productive as well as sustainable.

The premise of this strategy lies in the belief that poor people can come together and utilise their natural resources to their advantage. This ot course would need considerable motivational and organisational inputs. In the present context these could be ideally provided by voluntary organisations (NGOs). Maharashtra has been known for a tradition of social reforms and voluntary social service. At present a number of voluntary organisations are operational at the grass roots level. The present issue provides an ideal opportunity to all voluntary organisations. The issue is related to the core process of agricultural production and deals directly with the livelihood interests of the poor. If these organisations decide to provide motivational inputs in selected villages, then it is quite possible to establish institutional arrangements for sharing the benefits of the commons in an equitable and sustainable manner. After the earthquake, considerable amount of funds have come to Marathwada. from both governmental and non-governmental agencies. This inflow of capital could be meaningfully used for undertaking the constructive measures mentioned above. It would thus serve both the pragmatic and long-term interests. The sense of deprivation experienced by dalits could also be minimised as they would be involved in the mainstream process of social and economic development.

#### Notes

[This is a concise version of the paper presented at the International Congress on Agrarian Questions held at Wageningen Agricultural University (NL) in May 1995. I am thankful to H Bedi of Community Aid Abroad, Pune for financial support and to Tatya Kamble of Sarvangin Vikas Sanstha, Latur for field assistance. The usual disclaimers apply.]

- i This is symptomatic of the general trend found in the arid and semi-arid regions where land allocation have reduced CPR lands to a small area (on an average 20 ha per village) which is typically heavily degraded and under open access usage [Arnold and Stewart 1991:21].
- 2 The seminal contribution in this regard is by Jodha (1986) but there are other studies as well.
- 3 It is a countrywide fact that common property resources in dry regions are considerably smaller in area than those in wet mountainous regions [Arnold and Stewart 1991:8].
- 4 A person holding less than 2 ha of dry land equivalent is considered poor in the literature on CPRs (Jodha 1986:1171).
- 5 This has been the rallying point of the pani punchayat experiment in Pune district of Maharushtra Its main argument is that water should be treated as common property and should be distributed in terms of per capita requirement and not in terms of rights in land. The technical and social viability of the programme has been well established [Bokil 1990].
- 6 The community fodder farms in Kheda district of Gujarat are a good example where the previous grazing lands (gouchars) are converted into a more efficient system of providing the biomass needs [Shah 1989].

# Misinterpreting Unfree Labour in Contemporary Haryana

Tom Brass

IN his latest, and it has to be said more strident, contribution to a series of exchanges with me about unfree labour in Haryana, Jodhka (1996) introduces no new information or ideas. Since the points raised by him in his previous contributions [Jodhka 1994, 1995] have been answered by me in Brass (1995, 1996), there would normally be no need for me to respond to his latest one.1 However, apart from fairly innocuous points, such as attributing to me an old view (about worker agency) and a new one (the 'two class model'), neither of which I hold, questioning my point about landholder bias and making symptomatically unsustainable claims about the decline of landholder power, Jodhka's latest contribution also contains two rather obnoxious points: a baseless innuendo about intellectual appropriation, and the invocation of a nationalist discourse, the object of which is intellectually and politically exclusionary. Since these cannot be permitted to pass unchallenged, I will deal with all of these points briefly.2

Complaining once again that I attribute "no agency to workers at all", Jodhka (1996:1286) repeats what by now even he must surely know to be an untrue assertion: that my view corresponds to one of "an absolutist power structure where labourers have no space to bargain and contest". About this continuing (mis)representation of my views two things can be said. First, and as I have pointed out ad nauseam it is precisely because workers exhibit agency in the form of a growing consciousness of class that landholders in Haryana increasingly resort to the debt mechanism as a method of waging class struggle 'from above'. That the latter is effective is clear, not just from what the labourers themselves have to say on this subject but also from what Jodhka states in his thesis. And second, what he forgets - or perhaps does not know - is that even chattel slaves were able to pursue specific kinds of agency, the exercise of which did not obviate the unfree nature of their relation.4 Jodhka fails to comprehend that an important difference exists between a free labour market (a direct exchange between worker and employer) and a free market in labour (an indirect exchange involving only employers or the latter and contractors). To regard the presence of labour-power in both transactions simply as evidence of free labour, and thus worker agency, is palpably nonsensical.

The next point - that I operate 'a two-class model' based on a landlord/labourer dichotomy, as a consequence of which I maintain "that a powerful class of landlords is still in control of the politics and economy of contemporary rural Haryana" [Jodhka 1996:1286, 12871 -- is of course nonsense on stilts. Excluding quotations from other sources and informants, the term used by me with reference to contemporary Haryana is not 'landlord' with its implications of precapitalist (= 'feudal'/'semi-feudal') relations of production and political power but rather 'landholder'.5 As is clear not just from my article on Haryana [see, for example, Brass 1990:60 note 25, 63 note 46] but also from everything else I have written on the subject of agrarian transformation and unfree labour. the concept 'landholder' encompasses rich peasants and capitalist farmers.

Linked to this is his equally problematic view that those who now possess economic power have shifted its focus and locus away from the village and 'outward to the possibilities of greener pastures in towns and big cities" [Jodhka 1996:1287].6 Unfortunately for Jodhka, this too is nonsense: where it has occurred, the recent expansion by agrarian capital into urban India has not been at the expense of (and thus involved a loss of interest and/or contraction in) its rural operations. Much rather the contrary, since rich peasants and capitalist farmers whose economic activity straddles the rural/urban divide, continue not just to own and consolidate property in the village but also to depend on the profitability of agricultural production in the latter context for the success of their whole accumulation project.7

Jodhka also objects to my raising the point about an inherent landholder bias in his approach to employer/workforce relations as a result of the presence of property-owning kinsfolk of his in one of the fieldwork villages, and disavows the relevance of his own 'personal context' to the way he perceives the issues in question. For a number of reasons, however, these remonstrations fail to impress (let alone persuade), not least because the point about landholder ideology is actually reinforced by so many other discursive components in his analysis (silence about the fact that employers threatened to recall debts at election time, a denial that

they were able to enforce the labour-servicing obligations of indebted workers; assertions regarding 'emancipatory trends', the non-existence/non-importance of unfreedom, its declining incidence, the powerful-workers/weak-landholder dichotomy, etc, etc).9

Invoking a recent intervention on this subject by Singh (1995) as support for his own views [Jodhka 1996:1287, note 3] cuts no ice either. To begin with, this kind of I-am-not-alone-in-thinking-this is something we can all do: that others share a viewpoint may be evidence of nothing more than the fact that they, too, are wrong.10 More importantly, the objection by Singh to the concept deproletarianisation stems from a different teleology: namely, that capitalist development requires the presence of free labour (or a process of proletarianisation), an interpretation consistent with the 'semifeudal' thesis.11 Singh's article has little to do with the substance of the dispute between Jodhka and myself whereas the latter concerns whether or not unfreedom exists and is declining, the focus of the former is on whether or not unfree relations are compatible with accumulation.12

Finally, the attempt by Jodhka to hint that his ideas and data about unfreedom have been appropriated by me is not just (and rather obviously) wrong and a disgraceful slur but hilarious.13 Although it is unquestionably the case that, like others conducting research into bonded labour, there is still much for me to learn about complex issues such as the causes of unfreedom/ attachment, its relational structure and significance for the political economy of development, etc, the implication that I remained unaware about any of these aspects until suddenly and magically enlightened about them in the context of Haryana by Jodhka himself, is actually quite amusing. As he well knows, there was indeed a process of enlightenment about the subject of unfreedom, but not quite the one his innuendo suggests. Precisely who owes an intellectual debt to whom is clear, therefore, not just from an admission by him about the origin of his own interest in this subject but also from the beginning (and crucial) portion of the chronology that he rather surprisingly omits to mention: namely, that Jodhka assisted me with some of my research in Haryana during the summer of 1987, a full nine months before he himself embarked on fieldwork for his own thesis.14

Somewhat predictably, and entirely understandable given the disintegration of his arguments in the course of these exchanges, Jodhka concludes his latest contribution by resorting to a ploy much favoured by the despurate - playing the nationalist card, 5 in my most recent contribution, the sole Hence the assertion by him that no one who is not an Indian national can possibly understand what is happening in the Indian countryside, which is as a result intellectually accessible solely to those who reside there and correspondingly inaccessible to those who do not. Unsurprisingly, this 'argument' reproduces in its classical form not merely landholder discourse but the ideology of its historically most powerful component, the landlord class. Amongst other things, therefore, such a discourse asserts that it is only landholders - the permanent and hence 'authentic' custodians of the Indian countryside - who can know 'their' workforce, what it thinks and thus what it really wants. This xenophobic turn on Jodhka's part is most regrettable, and constitutes yet more evidence (if this were needed) of the discursive connection between his analysis and landholder ideology.

#### **Notes**

- 1 Jodhka should rest assured that he personally has not 'unsettled' or 'disturbed' me in any way whatsoever. As always, my only quarrel is with inadequate theory, inappropriate methods, and the inaccurate claims to which the latter give rise.
- 2 It also gives me an opportunity to reply again very briefly - to the intervention by Singh (1995), which was published after I had already submitted my last contribution to the
- 3 Thus, for example, the following grass roots utterance: "We [labourers] want to unite, but it is difficult for us to organise unions in support of our wage bargaining, because farmers always bring these pressures [among which is the recalling of outstanding debts] against us to break our people" [see Brass 1990:63, note 45]. This is confirmed by what Jodhka (1990:255-56) himself observes in his thesis, namely that: "This category of moneylender [local farmers] does not lend merely for earning interest. Its stakes in the existing structure of the rural society are much more than any other social group. They control most of the village land. They also dominate in the village politics. They are always dependent on wage labour for the cultivation of land. They also need support of the small/marginal farmers in the village politics. Moneylending for them, is a method with which they reinforce this overall domination in village society".
- 4 In the case of the antebellum American south. for example, such agency extended from a capacity to cultivate their own small holdings or to work in local towns on the one hand, to a modicum of cultural autonomy on the other. For a variety of reasons, this kind of agency can be extremely supportive of landholder power (which is why it is permitted): not only do slaves meet a portion of the costs of their own reproduction (through subsistence cultivation), therefore, but they also generate additional income for their masters (through urban employment).

- reference to the landlord class in the sense outlined here is actually a quotation taken from a text by Jodhka [Brass 1996:240. note 20], so any strictures of his on this point should be directed at him and not me.
- 6 Although the source for this dubious proposition is Mendelsohn (1993), nothing in the latter text actually supports Jodhka's contention that landholder power at village level is declining as a result of newlyacquired urban interests. To begin with, the methodological focus of Mendelsohn's analysis of the 'transformation of authority' is restricted to the juridical process, and does not extend to the exercise of economic power. Since it is the locus where resistance is expressed, therefore, 'dispute settlement' by its very nature gives an exaggerated image of the extent and effectiveness of grass roots agency. By contrast, the absence of resistance, or its suppression, goes unrecorded in such an analysis, and is thus deemed by the unwary either not to occur

or to be of less significance. Furthermore, the theoretical focus of the text by Mendelsohn is on changes in caste rather than class relationships: his central argument is that, precisely because of the emergence of capitalist farming, the 'dominant caste' model of Srinivas and Dumont which has dominated theoretical models of rural India since independence, no longer applies (1993:816, 825, 828, 840-41). It is not the exercise of power at village level which has declined, therefore, so much as its exercise by the 'dominant caste'. To a large degree this argument coincides with my own, since what I argue is that unfree labour is not a 'feudal'/ 'semi-feudal' relationship exercised by a traditional landlord class (belonging to the 'dominant caste') but rather one that is now operated by rich peasants and capitalist farmers.

7 For the interpenetration of rural and urban commercial interests, and its connection with the new farmers' movements, see for example Banaji (1995). Jodhka's view about

**Economic and Political Weekly** 

Hitkari House, 284 Shahid Bhagat Singh Road, Mumbai 400 001

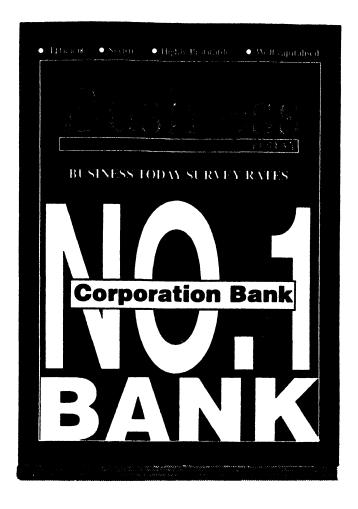

- the suffi of cuspossis (and thus nower) from rural to urban contexts is not only shared by neo-populists but also has as a sub-text the argument that, as they no longer have a significant or enduring economic interest in the village, landholders cannot possibly have a political interest either in what happens there or in the control of labour-power in such contexts. This appears to explain his belief that in Haryana, empowered permanent and casual workers face no serious opposition from disempowered landholders. As pointed out by me previously, such a view which posits the existence of powerful-workers/ powerless-employers is not merely fallacious but is in class terms also a politically disempowering discourse [Brass 1996:238-39, 240, note 23].
- 8 Having first denied the accuracy of this observation about property-owning kin, he then confirms its veracity. However, the subsequent declaration by Jodhka (1996:1287, note 2) that the holdings concerned are only 'marginal', and further that no attached labour is employed on them, remains unconvincing, not least because it fails to uddress the question that it is casual workers who are unfree. Moreover, having denied the relevance to his finding, of his own 'personal context', Jodhka then proceeds to argue that my findings are structured by my own 'outsider' status as a 'foreigner' (and a Cambridge one at that!).
- 9 There were in fact early signals to this effect. Hence the revealing comment the full significance of which escaped me at the time written by me ("SSJ says this is not bonded labour, before the truth emerges") in the margins of my 1987 Haryana fieldwork notebook during an interview with one particular agricultural labourer. Although the latter went on to outline in graphic detail the nature of the coercion exercised by his employer, it seems that Jodhka had decided a priori that no unfreedom was involved.
- 10 Characteristically, when confronted with texts that either do not support his views [such as Ahlawat], or do not support them in the way he claims [such as Chowdhry and Bhalla, on which see Brass 1996:239, note 6]. Jodhka's 'response' is silence. For my part, I could point out that much of the literature on rural Haryana supports the view of workforce recomposition and agrarian restructuring as an ongoing process [see, for example, Miller 1979:119].
- 11 As I am sure, Singh himself would agree, this is a complex issue as well as a politically important one. Significantly, much of the theoretical dispute about the presence/ absence in the third world countryside of capitalism and semi-feudalism has turned on the presence or absence in such contexts of unfree labour. this was true not only of the initial exchanges about Latin America [Frank 1969; Laclau 1977] but also of those which subsequently characterised the mode of production debate in India (Rudra et al. 1978; Thorner 1982]. Insofar as some Marxists continue to insist on the absence from agriculture of capitalism and the unbroken dominance of semi-feudal relations, however, capitalism must for them remain a politically progressive force. consequently, their 'Marxism' also remains

- trapped in the discourse of nationalism. While the latter is perfectly compatible with neo-populism (and, indeed, is its political raison d'etre), the continuing support for nationalism in a context of global capitalist development is or should be Incompatible with Marxism.
- 12 Although no one has greater admiration than I for the quality of and courage informing Manjit Singh's fieldwork (especially that involving migrant workers), it is nevertheless the case that his theoretical framework is somewhat problematic, as has been noted by me elsewhere [Brass 1986:120-26]. It is equally clear from another text [Singh and lyer 1984] that the situation he describes in Punjab for the early 1980s, when migrants from Bihar (many of whom either were or became unfree) were similarly displacing local workers (who for the most part were free), also corresponds to one of deproletarianisation. So, a parallel between both contexts does exist, albeit not the one proposed by Jodhka: insofar as the restructuring of the agrarian labour process in each context entailed work-force recomposition amounting to depro-letarianisation, the Puniab of the early 1980s is indeed like the Haryana of the late 1980s.
- 13 Of the many things that could be said about this, three will suffice. First, and as is stated clearly in Brass (1990:36), the data collected by me in Haryana were already written up by December 1987 in the form of a research report (submitted to the New Delhi office of the Ford Foundation), and it was on this that the information contained in my article was based. The first glimpse I had of anything written by Jodhka on the subject of unfree labour was when Punjab University invited me to be the external examiner for his thesis. in May-June 1990 My article on Haryana had already been written and accepted for publication (it came out in the October 1990 issue), and the references to his thesis were inserted at the proof-stage. Second, the two arguments - about both the change in the witness system and the enforcement of debts not by the landholder but by those belonging to the same caste as the indebted worker which were referred to by me [Brass 1995:698, notes 1 and 2) as having surfaced in Jodhka's article without reference to the fact that they were also contained in mine, are in fact mentioned by me not just in the article [Brass 1990:54, 65 note 60] but also and verbatim in the December 1987 report (pages 69, 105, note 155). And third, although my examiner's report on his thesis was generally favourable (an opinion that I have not changed), it was clear from the comments therein that I disagreed with his interpretation of unfree labour (which did not prevent me from recommending that he be awarded a doctorate). When Jodhka asked me subsequently (iii January 1991) for a copy of my examiner's report, I was more than happy to oblige. With hindsight, this was probably a mistake on my part, whether or not the dismissive references by Jodhka (1994) to my own views about unfree labour are in any way connected with the criticisms of his views about the same subject contained in my examiner's report is of course a matter for conjecture

14 Needless to say, the omission or this intuma and crucial section of chronology looks very much like another instance of suppressio veri. Concerning the nature and extent of intellectual debts, in a letter to me dated April 28, 1995 Jodhka admits unambiguously that: "My interest in attached labour was largely generated by you. I have learnt a lot from you...".

Director & L Ch

Vol 1 No 34

August 2431, 1996

## Themale 'Ascetic'

An this of the Brahma Kumari sect in its initial years enables us to unracirtain hidden aspects of Sindh society which account for an unput inted but successful patriarchal attempt to regulate and restrain femalicality or stimulate its self-restraint under the all-encompassing claimfeforming society. In later years, confronting a greatly changed social militie central thrust of the sect of control of female sexuality has again control to its success in breaking out of its high caste and class complexion and rving out a committed middle class urban following. 2307

## Limilisation and Kerala's Growth

Kers one of the least industrialised states in the country. Among the fact esponsible for this, the three most important are thought to be ultitant trade union movement, high cost of land acquisition and wroting power situation. Has there been a significant improvement in the croumstances in the post-liberalisation period and how do the in thent proposals the state has been able to attract compare with the red of other states?

## (stly Medicine

Tharmaceutical industry has demanded and secured several major changes in government's drug policy on the ground that the severity of price cool has hampered the industry's growth. Yet a categorywise analysis of the pass of drugs over a period of 15 years shows that there has been a great trend of prices, especially of essential and life-saving drugs. 2331

#### ying Hard to Get

sthe government's wooing of reign investors has become more diperate, the latter have stiffened thir terms. The government's own com for manoeuvre, on the other and, has grown progressively more mitted because the 'reformers' have hosen to focus almost exclusively on breign investment in the making f economic policy.

2282

## Nature-Friendly Planning

If the people as a whole are our constituency, surely no planning will be purposeful unless it be people-oriented. Primacy must be given to environment-propitious methodologies, not to technology in the abstract.

2297

#### For the Big Fish

The FAO's strategy for fisheries management is aimed at ensuring a steady supply of fish to the developed world and full employment of the fleets of the advanced distant water fishing nations.

2289

## Beginning Is the End

Yeltsin's inauguration as president on August 9 marks the real autumn of the patriarch, the end of the Yeltsin era. It also marks the beginning of a new presidential race in Russia. 2293

#### CTBT Debate

In no country, certainly not in India, is there as much awareness and sensitivity on nuclear weapons related matters as in Japan. By contrast, the debate on the CTBT in India has been both one-sided and extraordinarily ill-informed. 2275

#### Army in Nagaland

The army and paramilitary forces have been in the north-east for four decades now. Over these years their continued presence has undermined civil and legislative authority over the area and has brought a high degree of uncertainty and insecurity to the lives of ordinary people. 2284

#### **Political Funds**

The Supreme Court's judgment on the maintenance of audited accounts by political parties is a powerful blow for the cause of free and fair elections. The judgment has been rightly lauded, but its nuances need to be better understood.

2278

#### **Troubled Waters**

The decision on the height of the Narmada dam, being projected as an outcome of the meeting of ministers of the riparian states, is in reality a decision of the prime minister which, for the moment, papers over the differences among the three states.

2287

#### In Praise of RSS

ONE wishes T Mani Chowdary (August 10) had read the piece 'In Praise of RSS', a hit more seriously before coming out with his vitriol. One needs to understand different levels, layers and mechanisms through which 'an' ideology gets actualised through the actions of an individual. The reasons for which the Mahatma was killed by a votary of Hindutva, were the reasons which were being propagated by RSS. The RSS was at the forefront of criticising the Mahatma for 'appeasing Muslims', which according to RSS, in turn made them bold and due to which Pakistan was formed. The provocation for murdering him by a 'soldier of Hindutva' (Godse) came when Mahatma Gandhi advocate giving to Pakistan her share of Rs 56 crore from the treasury.

Though Godse was not assigned the task of murdering Mahatma by the RSS, it was the RSS concoction against Gandhi which created the backdrop for his being murdered by Godse. And going by the Frontline (January 1994) interview by Gopal Godse, Nathuram was a member of the RSS even at the time of his murdering Gandhi. Inspirations for such acts need not be obvious. because 'inspirations' are not commands, they are inner constructs rooted in the ideology. In this case the inspiration for the above act did come from the RSS propaganda, and the act was executed by a member of the RSS, the act was executed for the politics of Hindu Rashtra, which is the goal of the

To say that all naxalites are indulging in extortion and are killing one another, is to ignore the social phenomenon and concentrate on the aberration. One's 'class bias' is very obvious while seeing any phenomenon; it depends on this whether you see the naxalite movement as the cry of subalterns to get their rights or you just reduce it to being just an 'extortion' and mutual killing. That apart one has also to see that in the case of naxalites, and whole ML movement, despite the flaws, they had/have a totally different perception of strategy and tactics; they fundamentally differ in their understanding of society and politics from the understanding and politics of the CPI and the CPI(M). While in the case of RSS and Godse the fundamental approach to secular nationalism (i e, their hatred for it) unites them in an inseparable manner, and where they differed, was on the question of tactics. And undoubtedly it was and is the RSS which is the fountainhead of Hindu communal nationalism, which is the source of inspiration of all acts which attack either an individual who is a towering symbol of secular nationalism or a monument which has a place in secular national ethos.

For Chowdary let me state that I am aware of at least five inquiry committee reports which have come out (Reddy, Vythayathil, Venugopal, Madon and recently Bhagalpur), and to quote Basu et al (Khakhi Shorts Saffron Flags, Orient Longman, 1993, p 20) "At least three commissions of inquiry —

Reddy, Vythayathil and Venusop have found RSS inspiration behind an alim and anti-Christian riots, not so as direct cadre participation, but through term and sustained communal product.

In the case of RSS the front org lions (controlled by RSS 'pracharaks' a are working for the RSS agenda indu Rashtra. It is a mere division bour between the patriarch (RSS the organisations like BJP, VHP, Ba Dal, Adivasi Kalvan Ashram, etc, who are controlled by the RSS. Techr ately core organisation is responsible actions of its front organisations bu and ethically it is.

An organisation which strait-jate the role of women, workers and other such rase can be nothing but working for 'author and model of society. The fact is 'ng are anathema for this right wing organior (workers have to 'produce' for the organized to be part of a family headed industrialist, women are adviced to the ideal housewives, mothers and daures under the patriarchal supervision husbands, sons and fathers). The winds Sangh parivar is subtly 'attacher reservations for the disadvantaged section of society, is meant to uphold the 'quo' which in today's social matrix at the hegemony of upper castes/class. this is not authoritarianism'?

When I say the RSS is at the roccommunalisation of society, I mean to society. One is aware of the role of Muccommunalism and its negative impact society. As a matter of fact what started is not a valid question. One can very supplement a big list of Hindu communations even before the formation of R Both communalisms (Hindu and Musl started parallel to each other. Both communalisms did begin together, in response

secular nationalism and both these hated 'secular nationalism' (Gandhi-Nehru), both boosted each other, both were aloof from the freedom struggle and both created 'fear' of the other, within their own constituency. Since partition Muslim communalism is on the defensive, while the RSS brand Hindu communalism is on the offensive and is the communalism of today's society. It is RSS which has systematically propagated 'hate Muslim' ideology, it is RSS whose 'shakha boud-hikks' (intellectual sessions) train the volunteers in the communal, Hindu Rashtra doctrine. Muslim communalism is equally condemnable, in today's society it performs the function of oppressing poor Mulsims and giving the necessary provocation to Hindu communalism, but all said and done it is the Hindu communalism spread by RSS which is the real threat to today's society.

One does not hold a 'brief' for 'communist' parties and their non-democratic practices in the erstwhile socialist states and elsewhere. Despite all the drawback and dictatorial policies most of the communist parties transformed their countries from feudal empires in the direction of modern industrial societies. Their role is to be contrasted with the military and other dictators who reduced their countries to banana republics, and puppets in the hands of American imperialism. But nothing whatsoever justifies the suppression of democracy, democratic norms and values, whatsoever be the given circumstances. And only in that sense I share with Chowdary, a condemnation of communist parties for their suppression of democratic rights. The mistakes of communist parties are no justification for the current oppressive 'philosophy' and practices of the RSS.

## Back in the Red

THE deterioration in the performance of sheduled L commercial banks in 1995-96 and the fears hat the situation may worsen in the current year must surprise those who had taken the authorities' claim that the recess of cleaning up the banks' balance sheets had been completed by 1994-95 itself. To any objective observer, however, it was clear that the way the government had gone about the ask was replete with problems and was not sustainable in the medium term. Broadly, the approach has been that the finanial system exists for its own sake and the objective of rebuilding the balance sheets of banks and financial institution had to be pursued irrespective of the costs this imposed on it government budget and the real sectors of the economy. In consequence, the economy has had the worst of bothlie worlds: the working of the financial intermediaries has ben such as to hinder the growth process and the financia institutions themselves have been hard put to it to come ou of the red.

It is a fact that over the years the banking adustry had accumulated a variety of problems associate with rapid growth, but all the same the fundamentals of blic sector banking had remained strong. Despite the operational inefficiencies and the phenomenon of disintermedation, banks had been consistently attracting high deposit gowth, thanks largely to the public confidence that governmat ownership had conferred on them. Also, the banking indury had come to accept lending to the far-flung sectors of the sonomy as its primary function. Of course, the industry was unently in need of revitalisation, but the blanket application i mainstream stabilisation and structural adjustment programmes to the financial system has actually destabilised the system, for which the economy will have to pay dearly wer the years. What was needed instead was a more discrimnating reform that would have addressed with vigour (a) the poblem of loan recoveries and non-performing assets, (b) th#application of prudential accounting norms, namely, income recognition and asset classification, and (c) the subject or evitalising the management and internal structures of banks including issues relating to profit planning, costing of perations, staff motivation and enforcement of performancicriteria, proper housekeeping, balancing of books and reconfiliation of interbranch and inter-bank transactions. A most discriminating approach in the application of provisioning requirements would, for instance, have treated investment in sovereign securities differently from the present insistence on a sizeable proportion (50 per cent) being marked to market or the prescription for balance sheet valuation of 14 per cent yield to maturity for the 10-year securities which did not have a quotation in March 1996. These obsessions are rooted in the RBI's blind faith that it was possible to create overnight a large secondary market for government securities, ignoring the fact that large trading in government securities would necessarily require a narrowing of the difference between their yield rates and interest rates on commercial instruments such as CDs, CP and bills — in other words, profound structural changes in the financial system and total market orientation which are neither possible nor indeed desirable at this stage of development of the economy.

No less damaging have been the consequences of the insistence upon public sector banks and financial institutions satisfying an 8 per cent capital adequacy norm by March this year. This has been sought to be achieved by massive recapitalisation to the extent of Rs 14,000 crore provided by the government through the budget, by raising fresh capital through primary issues of bonds and equity by some banks and financial institutions in competition with the manufacturing sector, substantial upward revision of yield rates on government securities and large increases in the rates of interest charged by banks and financial institutions on their loans and advances following the freeing of lending rates. Taken together these measures have harmed the working of the financial system and the real sector in a variety of ways. The interest burden on the central budget has shot up from Rs 21,498 crore in 1990-91 to Rs 60,000 crore in 1996-97, a rise of 179 per cent in six years. The government's internal debt has ballooned during this period. Likewise, real rates of interest on both short- and long-term advances from institutional agencies have touched dizzy heights. The general interest rate structure has experienced tremendous pressure as a result, apart from the government's borrowing, of the primary issues of capital by banks and financial institutions, all of which could have been avoided if there had not been the insistence on banks fulfilling wholly premature capital adequacy norms.

The most damaging effect of the banks' attempt to fulfil the capital adequacy requirement is to be seen in their growing reluctance to pursue their normal activity of lending to the productive sectors. Instead they have preferred to make substantial investment in government securities; despite a sharp reduction in statutory liquidity requirements, the ratio of banks' investments to their demand and time liabilities has remained virtually unchanged in the past six years, at 35.4 per cent in March 1990, 34.9 per cent in March 1995 and 34.3 per cent in March 1996. There is enough corroborative direct evidence of banks shying away from normal commercial lending.

It may be claimed that the operational performance of banks has not been as disappointing as their balance sheets suggest.

Though the nationalised banks have moved from a net profit of Rs 270.57 crore to a net loss of Rs 1,122.23 crore, the number of loss-making banks has declined from 12 in 1994-95 to seven in 1995-96 and the bulk of the loss, of as much as Rs 1,336 crore is attributable to a single bank (Indian Bank) due to a series of irregularities. The banks' non-performing assets ratios have come down. Also, only eight of the 27 public sector banks have failed to fulfil the required 8 per cent capital adequacy norm. But, as pointed out above, these improvements have been secured at a heavy cost to the exchequer and the economy. Further, it does not also appear that these improvements will be enduring; in fact all indications are that 1996-97 will be yet another year of deteriorating performance. Also, their financial performance apart, the persistent reluctance of the public sector banks to engage in normal lending activity will be damaging to the growth of the economy. Even their performance in terms of their priority sector lending as a proportion of their total advances is exaggerated because of the slow growth of the latter.

#### **HUMAN DEVELOPMENT**

## Pie in the Sky

ACCORDING to the Human Development Report 1996, the world has become more polarised than ever before. The ratio of the shares of the richest and the poorest increased from 30:1 to 61:1. Points out the report, "Development that perpetuates today's inequalities is neither sustainable nor worth sustaining". There is much that is wrong with the growth patterns of third world/ developing countries. Sometimes the growth has been rootless; that is, in pursuit of nationbuilding goals governments have imposed impossible conditions on the people, wiping out minority cultures or marginalising those who do not contribute to or subscribe to the dominant cultures. Growth has also been voiceless in many countries where political repression and authoritarian governments have nevertheless enhanced the indicators of economic growth.

The polarisation is also reflected within countries: the gap between the richest and the poorest in many countries, especially those with shrinking incomes, has grown sharply. Overall although life expectancy in most developing countries has increased, it is still not what is obtainable in the developed countries. And this is necessarily a consequence of the deprivation in health, with the very young and women continuing to temain vulnerable. Notwithstanding the incremental human progress in some of these countries, it is not a picture which spells

hope. There is clear indicat iton that with exceptions the lack of econ-tonic growth rooted in the specific social and cultural and therefore political traditions of individual developing countries is disastro out or human development. If indeed the growth ruthless as the report says it is in so mad nyd veloping countries, this is often due to their adopting universalised solutions prescribed by multilateral benefactors. And if the growth has been voiceless, again the perpetrators and promoters of such development have been aid-givers and global conomic interests. And yet amazingly the HDR can with equanimity prescribe yet more formulae for sustainable and equitable growth: a political commitment to full enhancement. enhancing human capabilities, strengthening small-scale and informal production, broader and more egalitarian access to land, and research into labour-intensive technologies.

These prescriptions become particularly interesting when we look at the human development trends in developed countries. More than 100 million people in OECD countries live below the national poverty lines; more than five million are homeless this in countries which have registered expanding economic growth. The per capita income of the poorest in the US is less than a fourth of the country's average per capita income and in Japan it is nearly half. In Australia and the UK the richest 20 per cent earn 10 times more than the poorest 20 per cent. Income distribution in the UK has over the last 30-odd years become more unequal. There is also an unequal distribution of assets: in the US in 25 years the richest per cent of the population expanded their share of assets from 20 per cent to 36 per cent. Unemployment rates have risen, there are more than 30 million looking for work to ay. The wage rate for women, another indicator of human progress, is still only two-thirds that for men; nor are women secure in their societies. While life expectancy has continued to rise, it also means that more than 13 per cent of the population in these countries are over 65 years old and more than 30 million people are over 80 years old. This is bringing its own problems - apart from the need or specialised health care and support services, it also means that these countries have to generate enough revenue to afford some protection for the older people. Interestingly, while industrial countries have higher enrolm and literacy rates, there is growing concern about falling standards and number of the technically qualified, given that on a third or less of students take technic courses or read for natural sciences degree Thus not only may incomes be becomin polarised but the opportunity to acquire incomes too may be shrinking. Add to this what the UNDP report has to say on the state of political participation in these societies; union membership, an indicator as the report points out, of the strength of civil societies and of how much voice the productive sections of the population have, has been falling in most industrial countries (the exceptions being Denmark, Finland and Sweden).

These societies are also becoming increasingly insecure, having repercussions on the social fabric. This is seen not only in the increase in violent crime, traffic accidents and addiction but also in the violence against women and increasing incidence of child abuse. In many developed countries marginal indigenous populations are rapidly being wiped out due to one or the other reason. It is a measure of the blinkered approach of the HDR that, in spite of the facts and figures. there is little comprehension of the fact that the impending human disasters in the industrial world (and elsewhere) are a result of the political-economic trajectory being traversed by the industrial countries. There is no way that 'humanising' components gender equality, increased social spending by the state or good governance - can alter the primarily rapacious nature of global capitalism.

#### **POLITICS**

#### **Congress Game**

THOUGH the Congress has said repeatedly that it is lending 'unconditional support' to the United Front government, it is clear from the course of events that the party and the party president personally have made the support bargaining counter to bolster their positions. The tactic has been craftily deployed by Narasimha Rao not only to keep the UF government on tenterhooks but also to beat back the growing dissidence against his leadership within the Congress.

The hue and cry raised over the alleged surveillance of Narasimha Rao's residence and tapping of the telephones of senior Congress leaders, including Rao, appears in retrospect to have been aimed at countering the efforts of Congress dissidents to join the UF government. Reports of talks between prime minister Deve Gowda and Congress dissident leaders K Karunakaran and Sharad Pawar had been appearing in the newspapers. By publicising reports of phone tapping directed against Congress loyalists, Rao was able to have Deve Gowda rushing to his residence to 'clarify' the matter and thus succeeded in reasserting his command over the party.

But CBI disclosures of the mind-bogglin booty amassed and hoarded by Sukh Ram the telecom minister in Narasimha Rao' government, is a different kettle of fis

altogether. When the opposition had levelled charges of corruption against Sukh Ram, Narasimha Rao had gone out of his way to defend his minister in parliament. But the CBI revelation have brought out close business links between Narasimha Rao's son Prabhakar Rao and the promoter of 'Advanced Radio Masts, Patalu Rama Rao, who has been pinned down by the CBI in one of possibly many telecom scams. Narasimha Rao who is already facing charges against him in a cheating case and a bribery case and has his kins involved in various financial scandals has decided on attack as the best form of defence. By issuing a veiled threat of withdrawing support on the ground that the UF government was diverging from Congress policies, Narasimha Rao again had the prime minister Deve Gowda scampering to his residence. The Congress can order home minister Indrajit Gupta to keep his hands off Congress Party affairs, but the prime minister cannot evidently stand up and assert that the Congress cannot dictate to the UF in policy matter.

The prime minister himself needs Narasimha Rao's backing to ward off attacks by constituents of the UF. This is clear from the way the Andhra Pradesh Congress has remained mum over the Alamatti dam row that has been raging between the Telugu Desam Party and the Karnataka Janata Dal. Further, the prime minister looks upon himself as a crusader against the BJP. In his excessive zeal to cut BJP down to size he seems to overlook regional political variations. His hour-long meeting with Bal Thackeray when the latter's party has been cornered by charges of extortion, illegal eviction of tenants and murder in the state, and sparing hardly 10 minutes for meeting Janata Dal party workers are little short of blunders of political judgment. CM Ibrahim, the prime minister's close confidant, showed his political ineptness when at a meeting at Bhendi Bazar in Mumbai he argued that since the Shiv Sena is inspired by Shivaji who was not against Muslims, the Sena should disassociate itself from the communal BJP. The attempt at driving a wedge between the saffron partners was so ill-timed that it has provided the besieged Narasimha Rao with a pretext to question the secular credentials of the UF and to extort further a price of Congress support.

**BHOPAL DISASTER** 

## Hope, of Sorts

THE United Front government's decision to revive the extradition proceedings against Warren Anderson who was chairman of Union Carbide at the time of the 1984 disaster is no doubt a commendable long-delayed.

move. To he isousands of victims in Bhopal, Anderson presents a company which has wrecked the lives. But even more than the disaster, An erson and his ilk have come to be seen as the perpetrators of the Orwellian disaster with followed, of doublespeak, shrouds of the recy, deliberate misinformation campaigns cientific jugglery and blatant and system is distortion of truth. That the Indian goe inment has chosen to all but abandon to proceedings seeking to get Anderson of face the charges in court has been a shreful reminder of the extent to which desliping countries are beholden to multinatings.

Whethrais decision of the government, taken appently at the initiative of the external fairs minister after a meeting of a delegation of victims with the CPI general secretar will actually be acted upon is of course you be seen. It is useful to recall that it was at Congress government which dragge atts feet over the extradition proceed as and, before that, played out the farce charresting him when he landed in India cit to immediately release him. Given the cupit political circumstances whether the La parties will be able to force the Unite Front government to show greater interest in the Bhopal proceedings in court is a monguestion.

Eva more remote is the possibility that the overnment will revive interest in reserching the consequences of the gas expoure on people's health. The ICMR has long closed down its research units and transerred some of the projects to the state govament, which is now employing staff on and hoc basis and might well close down therojects with little or no notice. This is a dister not only in terms of the loss to the research literature on an extremely hazardous sustance which continues to be manufaured elsewhere in the world, but also mans that the follow-up on medical treatment of the thousands who are suffering will cotinue to be ad hoc and symptomatic. Far wase of course is the case of the dependents othose who have died because of exposure take gas but are unable to prove the causality. nust often because no clear prognosis is railable of the gas-affected. No official tempt has been made to use alternative thods for determining causality, such as e verbal autopsy method. (The method mprises collating information on the dead rough interviews with their next of kin and brough available documents and getting

such information scrutinised by an independent medical authority who can arrive at a diagnosis of the cause of death.) The method has been much discussed in academic circles and has been used extensively to assess causes of childhood deaths and maternal deaths and has been used experimentally in rural South Africa and England. While experts agree there is a great potential for using the method in Bhopal or similar disaster situations where adequate documentation is not available to prove causality, it needs to be tested out in Bhopal. Today this appears to be the only way that the survivors of breadwinners who died after long illnesses connected with the disaster can hope to get recompense. Not surprisingly, of course, no state agency in the health and medical research field has been interested in conducting these exploratory investigations.

VIP SECURITY

## Threat to Citizens' Rights

SECURITY arrangements for VVIPs, which have become a threat to the movement of ordinary citizens in the streets, have now begun to impinge on the privacy of people in their own homes too. During prime minister Deve Gowda's recent visit to the Sitaram Bhartia Institute in the capital, not only were the roads cordoned of f, but the police entered the house of a professor living nearby and took complete control of the terrace of his house for hours together, since it provided them with a vantage point from which to cover the prime minister's route. When the professor protested he was hauled up by the police on the charge of 'preventing public servants from executing their duty'!

Some months ago, the daughter of the eminent diplomat the late Badruddin Tyabii complained in the pages of a national daily how even before she could recover from the shock of her father's death, security forces entered her house, snooped around every nook and corner, and then billeted themselves in her kitchen ordering tea and snacks - all in the name of protecting the vice-president who was to visit her place to pay condolences on her father's death. Quite recently, as a result of the vice-president's visit to his dental surgeon in Connaught Place in New Delhi, people were trapped inside the building (which houses a large number of offices apart from the dental clinic) and outsiders were not allowed in, as security forces

#### **Special Number**

In view of a Special Number to be published in early September, there will be no weekly issues on August 31, September 7 and 14.

clamped a cordon around the premises as long as the vice-president remained closeted with his surgeon

Our people appear to show incredible patience in accepting all sorts of inconvenience caused by the gun toting security forces acting under the olders of their masters, the VVIP politicians. Not a single private individual nor the numerous human rights groups are known to have approached the judiciary to put an end to such regular harassment of the public, which apart from being extremely humiliating to anyone having an iota of self respect, violates the citizen's fundamental rights and the right to privacy

It may be worthwhile comparing the security arrangements provided for the president the prime minister and the ever increasing flock of VVIPs in India with those prevalent in other democracies to protect politicians in similar important positions Even in dictatorial regimes, where unpopular rulers are more vulnerable to assassination attempts, one rarely comes across such ceremonial displays of paranoia as one witnesses in the streets of Delhi or other parts of our country whenever a VVIP chooses to travel or visit a particular spot (which during the visit is turned into a highsecurity enclave with restrictions imposed on the movement of its residents) Journalists who have been in the capitals of countries in south and south-east Asia passing through the worst periods of dictatorial rule -Islamabad under Zia, Dhaka under Eishad Manila under Marcos, Bangkok under military regime – find it difficult to remember experiences there as unpleasant and insulting as Indian citizens face in Delhi, even when engaged in the innocuous task of crossing the road during a VVIP's trip along that route and the rough treatment that he/she gets from the security guards

Yet it is the revenue provided by these citizens - recovered by the state in the shape of taxation - that is being spent on protecting their rulers and politicians which in the process, deprives these citizens of their fundamental rights. According to one estimate, the annual expenditure borne by the centre on providing security for these politicians has crossed Rs 1,000 crore. The National Security Guard (NSG) which was raised as a crack force to tackle anti-sabotage and anti-hijacking operations, now spends a large chunk of its Rs 55 crore annual budget on protecting 19 VIPs including among others the former Lanul Nadu chief minister Jayalalitha (against whom criminal cases are pending) and former MP Sajjan Kumar (who stands indicted by government appointed commissions for complicity in the 1984 massacre of Sikhs in Delhi)

It is ironical, but sad at the same time, that a veteran Indian communist is a party to such

shameful decisions as the home minister in the present government. Like many other proposals announced by Indrajit Gupta with tantare in the first flush of his ministerial role his brave decision to withdraw security cover from undeserving VIPs and thereby curtail expenditure had to be hastily withdrawn following pressures from politicians who wield more clout than Gupta in the United Front cabinet. So the NSG 'black cats' continue to protect political

leaders who are arraigned before the court: Under what law can they enjoy stat protection?

While posing this question to the hom minister, the democratic rights organisation movement have also to decide when they ar going to take up the issue of the daily violatio of the fundamental rights of Indian citizen by the VVIP and VIP security arrangement that are formulated by the union hom ministry?

## Senior Consultant Mahila Samakhya, U.P.
